Mobile Fan, Clock Depot To Serve Hydro Users In East York Township

Starting immediately, additional facilities will be provided for Hydro consumers in East York Township, who wish to have their clocks and fans changed over for operation on 60-cycle power, or to exchange them for the latest 60-cycle models.

In making this announcement, Hydro Chairman Robert H. Saunders stated that a mobile clock and fan depot will follow the route of the cutovers in the township. Approximately 20 more "cuts," to switch the power supply from 25-cycle to 60-cycle, remain before July 11 when the frequency standardization program in East York is scheduled to be completed.

The mobile depot, a large trailer pulled by a truck, will be fully equipped with all models of clocks and fans. It will be the same as the parent on standard depots, only on a smaller scale.

The main depots in East York have been extremely busy places. During the month of May, a total of 2,165 consumers visited the clock and fan depot at McGregor school, where the staff handled 2,763 clocks and 614 fans, which the customers desired to exchange or to have changed over. At the other parent depot in the township, located at Danforth Park school, the staff handled 1,425 clocks and 458 fans brought in by 1,458 consumers during May.

Chairman Saunders said that the mobile depot would prove a boon to those consumers who find it difficult to take their clocks and fans to the main depots. Consumers may leave, at this mobile depot, the clocks and fans which they desire to have changed over for 60-cycle operation. These items can be picked up at one of the main depots after the necessary work has been done. Consumers will be advised when and where to call for them.

The mobile unit will be stationed in each "cut" area as the frequency standardization work progresses in East York Township, now almost two-thirds completed. It will be located as centrally as possible on the less busy streets.

The remaining changeover work in the township will be mainly west of Donlands Avenue between the boundaries of Leaside and the city of Toronto.

THE MIXING BOWL

By ANNE ALLAN
Hydro Home Economist

Hello Homemakers! Whenever an accident happens it brings pain, tragedy and expense. We know that printed words, by themselves, cannot prevent an accident, so the most we can do here is to give you a few specific and practical suggestions for safety. By being careful you can help to prevent accidents. Children especially, need to be "briefed" on safety measures.

As soon as the school term is ended, the children feel "Scot-free" and become careless. On the other hand, we adults can be more thoughtful. The starting point in Home Safety is to locate the "danger spots." The next step in accident prevention is to find out the causes. Ask all the members of the family to eliminate danger spots and it will make them safety minded. For instance, if gasoline is stored in an unpainted can, have it painted red and labelled. If the cellar stairs need repair, have them fixed before anything can happen.

Alert Today — Alive Tomorrow

- Precautions:
1. Do not touch a light fixture or cord while standing in a wet place.
 2. Shut off the current before replacing an old fuse.
 3. Do not place fans, etc., where cord may be tripped over. Always disconnect electric equipment such as irons, toasters, when not in use.
 4. Any electrical appliance that gives a light shock should be repaired at once.
 5. Only rubber cords should be used where they may be likely to get wet as in the laundry.
 6. Be careful of slippery floors.
 7. When using a sharp knife, always cut away from you.
 8. Use an oven mitt for carrying saucepans that are filled to brim.
 9. Wipe any spills immediately.
 10. Make sure that fire extinguishers are in good operating condition.
 11. Keep matches out of children's reach.
 12. Cross the street at an intersection and walk on the highway, facing the traffic.
 13. Do not go swimming alone and observe the rules of swimming in supervised areas.
 14. Do not leave children alone in the automobile unless emergency brake is on firmly and the keys are in your pocket.
 15. Be a thoughtful, careful and skilful driver of your car.

Take a Tip

1. Put out a picnic fire with lots of water; smother out a small fire with a blanket.
2. Keep a first aid kit handy; observe the rules of first aid and call a doctor and make a patient comfortable.
3. Remember that mild soap and water is one of the best cleaning agents for bruises, and minor cuts.

The Question Box

Miss T. E. asks: How to remove grass stain from a white dress?
Answer: On materials that soap and water might injure, sponge the stains with benzene or diluted denatured alcohol. On cotton or linen fabrics, dip in Javelle water for one minute (no longer) then rinse thoroughly.

Mrs. H. A. asks: How to remove chocolate ice cream from a silk dress?
Answer: Sponge chocolate ice cream from a nonwashable material with carbon tetrachloride. Let it dry; then sponge gently with a damp cloth.

Mrs. G. M. asks: How to remove mustard from grey flannel?
Answer: Work glycerine into the stain, rub lightly between hands and then sponge with soap and water.

Mrs. S. W. asks: How to remove varnish from blue woollen slacks?
Answer: To remove varnish, mix equal parts of benzene, carbon tetrachloride and banana oil and apply to stain. (You may rub in a dry cleaning soap to help loosen the stain.) Finally rinse out with carbon tetrachloride.

FIGHT Poultry Colds with HTH-15

The only "floating powder", dry Chlorine, for dusting poultry against breathing disorders. Just dust lower birds' heads. HTH-15 is so finely divided that it settles slowly - pre-longing treatment.

For Drinking Water

A little HTH-15 in drinking water makes it safe and helps prevent stims.

Weed Infests Pastures, Chemicals Won't Kill It

Discovered for the first time in York County three years ago, a weed known as yellow bedstraw has now infested pasture lands and roadside fields. Agricultural authorities report there is no chemical solution at present effective enough to kill the weed.

County weed inspector Frank Merritt said last week that growth of the weed could be retarded by chemical sterilization of the soil, the use of a chlorate spray, or salt.

Weed has been reported in large clumps near Roches Point, beside No. 11 Highway near Bond Lake and along the Markham-King Township line.

"The weed will not live long in cultivated fields," said Mr. Merritt. "Both townships are preparing to attack the weed by spraying all township property and roadsides."

George McNair, R.R.2 Maple, operator of a 400-acre farm, said he had burned the weed out and sited it but it still continued to grow.

"In three to five years it can cover an entire pasture," he said.

S. R. Rasmussen, another Maple district farmer, said the roots of the weed interweave with all other types of plant life. He said cattle will not touch the plant.

Another weed becoming more prominent in the county in the past few years is the yellow rocket, a distant cousin of the ordinary wild mustard. In some areas it is known as winter cress.

"It also is a comparatively new weed for York County," Mr. Merritt said. "It can be eliminated by pulling in the first year of growth as a rule." The yellow rocket is a biennial weed.

Agricultural authorities reveal that the weed has been widely spread throughout Ontario as an impurity in clover and alfalfa seed. The weed produces dense clusters of dark green, many lobed leaves early in the spring followed by clusters of yellow flowers.

It is reported that if a field is well drained and plowed and given fall and spring cultivation in preparation for the crop, the yellow rocket will not persist.

Total value of non-resident investments in Canada amounted in 1948 to seven and a half billion dollars, almost three quarters of which was held in the United States.

Modern Engineering and Materials Produce a

REVOLUTIONARY ELEVATOR

Wheels around like a Feed Cart
... it's so light in weight and well balanced

Handles Bags and Bales as well as Grain ...

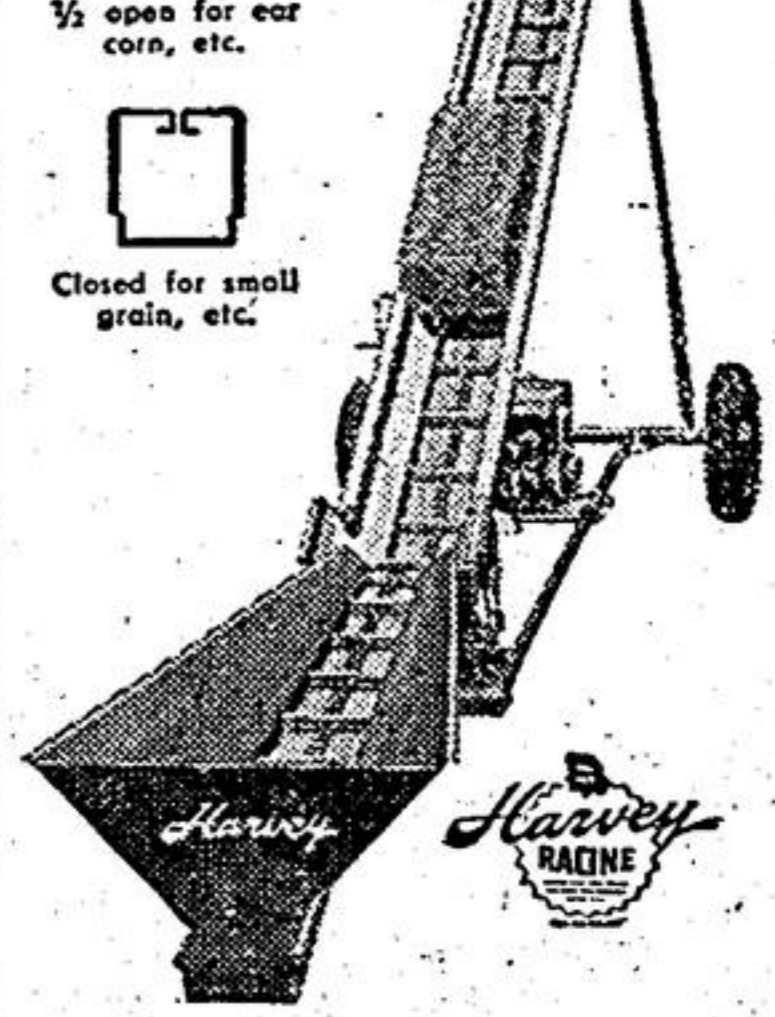

Hinged sides adjusted in matter of seconds to any of 4 positions

Full open for bales.

1/2 open for bags.

1/2 open for ear corn, etc.

Closed for small grain, etc.

Here's that new Harvey Elevator thousands have written in to the factory about. It's revolutionary in the ease with which you can move it from job to job, and fold it up to store away in a 20-foot shed. You get these and other advantages because, for the first time, modern engineering principles have been used to build an elevator—the same kind of ideas and materials which have produced such modern miracles as streamlined trains, and round-the-world airplanes.

Come in and see for yourself!

"No one should get up in the morning until he feels like it," says a psychologist. What does he want people to do—starve to death by the thousands?

There is No Substitute for GOOD EQUIPMENT

Nothing takes the place of up-to-date equipment for getting work done when it should be done . . . for catching-up with the job in late seasons . . . for removing the worry of the help problem . . . for increasing production . . . for keeping costs down and leaving more margin for profit.

Good equipment pays in many ways. And through a wide range of sizes and styles of tractors and power machines the advantages of modern equipment are available for all sizes of farms and types of farming.

Designed and built to embody the latest in engineering developments and manufacturing skills Massey-Harris power farming machines bring to user's features that help them do their work easily, quickly, and at less cost.

Presto! A "New" House

It's Barrett "magic"! You re-roof with sturdy Barrett Asphalt Shingles. You cover weather-worn side-walls with Brick-Type Sidings—so much like brick itself you'll have to look twice to tell the difference. Presto! You have a "new" house—at a fraction of the cost.

Take a close look at your own home today. Check the roof. Is it weather-worn? Now is the best time to put on a new one—a Barrett Asphalt Shingle Roof. It's economical and you can save extra time and money by applying it right over your old roof! (There's a whole new range of colours to choose from, too.)

At the same time, give your home a stylish, new brick-like appearance with Barrett Sidings. They're trim and distinctive. They provide extra insulation and fire-resistance. And, in some cases, they'll cost not much more than a good paint job!

Stop in at your Barrett dealer's the next time you're downtown. See just how easy and economical it will be to make your home look like new.

Your Barrett dealer sells Protection Plus

He stocks a complete line of roofing, insulation and weatherproofing materials. He's got what it takes to stop almost any weather. Whether your problem is leakage, seepage, rust or rot—see your Barrett dealer first!
