

Change Over Communities Served by Markham R.O.A.

Hydro's frequency standardization program will commence in the rural areas and the communities in the Southeastern and East central sections of York County beginning the last week in November and continuing until the middle of January, 1951.

This was announced by Commission Chairman Robert H. Saunders who stated that the domestic, commercial and industrial customers in Agincourt, Stouffville and Markham and in the rural districts served by Markham Rural Operating Area will have their frequency sensitive electrical appliances and equipment changed over for operation on 60 cycle, during that period.

The standardization program is scheduled to start for the estimated 290 customers of all classes in Agincourt on November 29, and to be completed on November 30. Simultaneously, changeover, involving customers served by Markham R.O.A. in the Agincourt area will commence on Nov. 30. This will be followed by the standardization of equipment owned by customers supplied by Markham R.O.A. in the Brougham area, commencing December 5.

During the period, December 12-18, approximately 600 customers of all classes in Stouffville are scheduled to have their frequency sensitive equipment altered for 60-cycle operation. Beginning about December 19, the customers served by the Markham R.O.A. in

the Ringwood area will have their equipment changed over.

Work is expected to commence for the estimated 560 customers of all classes served by Markham-Hydro-Electric System on January 5, and standardization program in that municipality is expected to be completed by January 9.

The program then is scheduled to begin on January 11 in the Unionville area for the customers served by Markham R.O.A. in that district, and to be completed about January 16.

There are approximately 2,880 farms, community dwellings and commercial establishments served by the various distribution stations in Markham Rural Operating Area.

The standardization program then will swing over to the Woodbridge and Bolton districts, and is expected to be completed there during March or April 1951. This virtually will mark the completion of the frequency changeover work in Area "A," which is bounded on the east by Stouffville, on the west by Woodbridge and Bolton, on the north by Lake Simcoe and Sutton and on the south by Lake Ontario and Scarborough Township, conforming very largely to the boundaries of York County. However, Area "A" does not include the Greater Toronto district which is in Area "N," scheduled tentatively for changeover between 1951 and 1954.

Canada's Eskimo population numbers less than 9,000.
