IN MEMORIAM

BYER — In loving memory of my dear husband, D. F. Byer, who passed away suddenly Oct. 3, 1951. When all is still and silent, And sleep forsakes my eyes, My thoughts are in the silent grave Where my dear husband lies. Sadly missed, wife Martha, daughter Agnes and sister Hannah.

KLINCK — In loving memory of my husband, Harry Klinck, who passed away October 2nd, 1956. "Wonderful memories are cherished forever."
 Ruby.

REDSHAW — In loving memory of a dear mother and grandmother, Mrs. George Redshaw, who passed away Oct. 4, 1956. Mother, you are not forgotten, Though on earth you are no more, Still in memory you are with us As you always were before.
 Alvin, Fern and family.

SCHELL — In loving memory of Priscilla Schell, who passed away Oct. 5, 1947. Sweet memories will linger forever. Time cannot change them it's true. Years that may come cannot sever Our loving remembrance of you.
 The Family.

Vanzant — In loving memory of our mother, Catherine Vanzant, who passed away Oct. 5th, 1955. A page in the book of memory Silently turns today.
 Lovingly remembered by
 The Family.

WILSON — In loving memory of a dear mother and grandmother, Elizabeth Jane Symes, wife of Andrew Wilson, who died on October 8th, 1956. A year has passed since that sad day When one we loved was called away. God took her home, it was His will. Within our hearts she liveth still. Sadly missed by
 Morley and Bertha,
 Margaret and Martin,
 Garry and Grace.

Medical Co-op Patrons Eligible For Govt. Plan

"We have been assured that those who are members of Co-op Medical Services will be eligible for the Government Hospital Plan as soon as it is available to payroll groups," stated Mr. Paul Meehan, Manager & Fieldman for the provincial Co-op Medical Services Federation. He was speaking at the annual meeting of Ontario (County) Co-op Medical Services held recently in Uxbridge.

Mr. Meehan also told the well-attended meeting that they could not afford to ignore the opportunity to take the Hospital Plan subsidized by the Federal and Provincial Governments, even though indications are that the premium paid direct will be more than members of the Co-op Medical Services are paying now.

"The increase in age expectancy poses a problem," continued the speaker. "To quote an international authority at the recent Conference on Ageing held in Toronto — 'It will not be long until we live to 110. Most causes of death are man-made. For example, we eat too much; one-half to keep us alive, and one-half to keep the doctors alive!'"

The Medical Co-op meeting was chaired by Mr. John A. Ball, President. Reports indicate a good increase in membership during the year. Fifty-three per cent are covered by the Co-op Surgical Plan, and all have the protection of the Catastrophe Supplement.

Twenty-seven members who had excessive costs of illness during the year received cheques totalling \$3,068 from the 1956-57 Catastrophe Fund. Most of these members were present to receive their cheques in person. The members voted to increase the Catastrophe Supplement fee from \$2.00 per family to \$4.00 per year. This increase should assure that, after payment under the Hospital and Surgical contracts, the Catastrophe Fund will take care of the excessive, crippling costs of illness. Special nurses are often a big factor in a Catastrophe Claim. These charges may be included, as well as the cost of the Doctors, and the hospital charges which are often only one-third of the total cost of an illness.

The Ontario (County) Co-op Medical Services will continue to increase their business in the Surgical and Catastrophe fields after the Government Hospital Plan comes into operation. Mr. Alex Johns of Manchester and Mr. Russell Batten of Ashburn were elected to succeed Directors Ryerson Beare and Walter Kerr. Mr. Wallace MacLean of Uxbridge and Mr. Clarence Hallett of Whitby, were re-elected to the Board for a three year term.

The officers for the coming year are: Mr. John A. Ball, President; Mrs. Walter Caruthers, Vice-President; and Mrs. Irven McLean, Secretary-Treasurer.

RUST NO PROBLEM IF BARBERRY ELIMINATED

Stem rust of grain and leaf rust of oats which cause so much damage to crops, would cease to be a problem if the Common Barberrry and European Buckthorn were completely destroyed, says the Field Crops Branch of the Ontario Department of Agriculture.

A rust spore overwintering on grass, straw, or other refuse can produce only one infection on grain the following year unless a host plant is present. In that event, when the spores open up in the spring they are deposited on the new leaves of Barberrry or Buckthorn plants where they are multiplied a millionfold and wind borne to fields of grain. This red rust, when once established, will go on to infect other fields of grain at great distances from the original infestation.

Common Barberrry and European Buckthorn have both been added to the list of noxious weeds under the Ontario Weed Act and must be eradicated. The Ontario Department of Agriculture has a policy of financial aid to assist all counties undertaking a clean up program.

Bolivia's seat of government, La Paz, is the world's highest capital. The city is situated in a sheltered valley at 11,900 feet. Its ski run starts down from a height of more than three miles.

GOODWOOD

Mrs. E. May
 Mrs. Hurst of Oshawa is visiting her brother, Mr. Isaac Foster and their sister who is visiting from England.

Mr. George Jones visited with Mr. and Mrs. Les Wideman on Friday.

A serious accident took place at the Art Parratt farm on Wednesday when little Nancy who will be three on Oct. 13th ran out in front of the corn binder to catch a ride on the tractor. Both legs are cut badly and she is suffering from loss of blood and shock. Our prayers are that her leg may be saved and she soon recovers.

Miss Doris Woodland entertained the members of her Sunday School Class at a birthday party for Irene Scott on Saturday.

Mr. and Mrs. John May entertained some members and families of the Donlands church choir at a hay ride and corn roast on Friday evening.

Mrs. Mae Swem from Los Angeles called on her cousin Mrs. Gladys Norton on Monday.

The W.A. of the United Church are holding their meeting at the home of Mrs. Herb Wagg on Thursday afternoon with ladies of Fifth Line as guests.

The B.Y.P.U. had a hay ride at the Bert May home on Friday. All report a good time, enjoyed devotions and the soup and sandwiches for lunch.

Mr. and Mrs. John May and Michael spent the weekend with her brother and family at Gravenhurst. Little Patty returned home after spending a few days with her uncle.

Silo filling and digging potatoes is the order of the day. Beautiful sunny days and frosty nights make it like fall. Last Thursday's frost took the vines and a lot of the flowers.

The Goodwood Friendship group met for the first meeting of the fall term at the home of Harry and Marjorie Woodland on Sept. 24th, with an attendance of over thirty. President Harry Woodland opened the meeting and conducted the business. It was decided to give a donation to the work done by Mr. and Mrs. Rae of Stouffville. Gladys Slack led some choruses. Reuben and Kathleen May took charge of the devotions and Dorothy Bennett and Olla Forsythe provided an interesting Fellowship hour. A delicious lunch was served by our hostess and her helper, Mary Hockley.

The English mastiff is believed to be a direct descendant of an ancient Asian dog often depicted on Greek, Assyrian, Babylonian and Egyptian artifacts. Some relics show the mastiff was flourishing as early as 3000 B.C.

Better Quality Potatoes Through Better Storage

Every fall in Ontario large quantities of potatoes are placed in various types of storage to supply consumer demands until a new crop is available the following year. In many instances, poor storage facilities and improper storage procedures result in potatoes being marketed that suffer from mechanical damage, undesirable chemical change, sprouting and shrivelling. Such low-quality potatoes are harmful to the potato industry, and create many problems for government inspectors, marketing agencies, processing plants, and consumers.

There is no simple solution to the overall problem of storing and marketing high quality potatoes, states Prof. E. W. Franklin, Department of Horticulture, O.A.C. But a simple and relatively inexpensive method is now available not only for preventing the undesirable effects of sprouting, but also for improving the quality of stored potatoes by using higher storage temperatures.

The Food and Drug Division of the Department of Health and Welfare has granted permission in Canada for the use of Maleic Hydrazide (known in the trade as MH Amine) as a sprout inhibitor for potatoes. Treating potatoes to prevent sprouting has many advantages. It will eliminate the directly undesirable effects of sprouting such as loss of dry matter, increased shrinkage, and the labour involved in removing sprouts.

But of greater importance is the fact that treated potatoes can be stored during the sprouting period at 50 degrees F., rather than the 38 to 40 degrees normally required to stop sprouting. A 50 deg. storage temperature will result in much better quality potatoes for food purposes than the 38 to 40 degree temperatures.

MH Amine is applied as a spray to the foliage after the tubers have formed but before the tops die or are killed. The correct time of application has been described variously as 2 to 6 weeks before harvest, 3 weeks after full bloom, one week after blossom drop, or 2 weeks before top kill. Earlier applications tend to reduce yields and injure the plants.

Suggested strength of the solution is 6 1/2 pints of MH Amine in 100 Imperial gallons of water per acre. Such an application will provide satisfactory sprout inhibition for 8 to 12 months when the tubers are stored at 50 to 55 degrees F. For good results the MH Amine treatment

should be applied on a sunny day with a minimum of wind, and with rain not expected for 24 hours. Careful spraying is essential to ensure complete coverage, and conventional potato spraying equipment has proven satisfactory for applying MH Amine.

In view of the present availability of MH Amine for inhibiting sprouting, the following program is recommended by Prof. Franklin for harvesting, storing, and marketing high quality potatoes for culinary and manufacturing purposes.

1. The program for high-quality potatoes begins in the field. This means that proper attention should be given to factors such as good seed, cultural methods, fertility and spraying or dusting for insects and diseases.

2. At the correct time before harvest, apply MH Amine to that portion of the crop to be stored for marketing after January 1.

3. If necessary, use vine-killing methods before harvest. Take all precautions to ensure that the tubers are handled as carefully as possible during harvesting operations and when filling the storage.

4. After filling the storage, give the tubers a two-week curing treatment at 60 to 65 deg. F. and high humidity. This will hasten wound healing and thickening of the cork periderm, which in turn will prevent many rots and reduce the moisture loss.

5. Following the curing treatment, reduce the storage temperature to 50 deg. F. and maintain it at this level together with a relative humidity of about 90 percent for the duration of the storage period.

6. Market the potatoes that have not been treated with MH Amine before sprouting becomes a problem.
