### Going To Need An Overhaul

recent government release tells us that the Unemployment Insurance Fund is down to less than \$300,000,000 from a peak of \$921,-000,000 in 1953. At the rate we are going this amount could be virtually wiped out with another winter of heavy unemployment. It would appear to be high time the government took a new look at what is obviously a serious situation.

We continually hear of abuses in the system and instances of fraud. We are even told that the government itself has dipped into the fund a few years back, in order to bolster other overspent departments of government. True or untrue, the fund is being rapidly depleted, and with an estimated \$20,000,000 a year being drained off by those who should not receive assistance along with the

recognized heavy drain, it will soon be exhausted.

Some consideration has been given to setting up two separate systems - one for seasonal and the other for non-seasonal workers. The non-seasonal would be similar to the present system as it was originally set up, to give workers some degree of protection for short layoff periods. This system would have to be as selfsufficient as possible.

The seasonal workers would have to contribute larger shares, because unemployment is more prevalent and of longer duration. To this latter setup the government would have to give some assistance.

There is talk of farm labourers being covered and a separate system seems all the more necessary if this group is to be covered as well.

### Condemnation

Condemnation is steadily mounting on all sides against Department of Highways officials who stubbornly refuse to install traffic lights at the Ringwood corner. Again this past Sunday a most serious accident occurred at this intersection, and while no one was killed, six persons went to hospital with multiple injuries as a result.

Petitions have been made by all the local municipalities involved as well as the County, yet the Department has turned a deaf ear on all the pleas and the toll continues to mount. A number of lives have already been taken and apparently still more fatalities are needed to prove to those who control highway safety that there is a need for lights.

The congestion on this dangerous intersection was as great this

past weekend as at any time this summer. Traffic in long lines coming along Highway 47 from Stouffville finds it most dangerous to try to enter the line proceeding south. Some of the traffic is trying to cross over Highway 48 and this is just as tricky.

. It would appear that a certain number of lives must be taken before the Department is ready to make any improvement and this is a deplorable situation.

The visibility at the corner is good in all directions, but with traffic moving in all directions and from business places nearby, accidents are certain to occur, particularly during weekends.

We would hope that the municipalities who have already petitioned for lights would do so again with even stronger urging than before.

### This One Is Welcome

An investigation into the administrative operations of government and its cost is one that will be welcomed by all taxpayers. The inquiry will take some time, according to the Prime Minister and two years is expected.

Prime Minister Diefenbaker has made a plea to business men who have complained that "business methods" should be introduced to government, to come forward with their

SUNDAY SCHOOL LESSON

recommendations as to how efficiencies and economies can be accomplished.

A three-man commission, an accountant, a barrister and a former treasury officer make up the group.

This is certainly one royal commission that should prove a profitable investment for the taxpayer and continue to pay dividends for years to come, providing the economies which are expected to be put forward, are adopted.

GOLDEN TEXT — O Lord our | space looking down on this mid-Lord, how excellent is thy get planet and watching the name in all the earth! -Psalm 8:9.

(Lesson for October 2)

THE GREATNESS OF GOD

Psalms 8; 104

THE LESSON AS A WHOLE

The Book of Psalms has always held a very warm place in the hearts of God's people. There are probably two reasons for this popularity: (1) they reflect every mood of human experience, and, (2) they exalt the Lord Jesus Christ in His various perfections and offices.

The Psalms are divided into five books and each is clearly marked by a terminating doxology. The Psalter begins with God blessing man (Psalm 1), and ends with man blessing God (Psalm 150). This is the proper sequence of things, and it cannot be reversed.

this portion of the Old Testament is the greatness and glory placed in subjection to him. But of God. This is primary and through disobedience Adam lost fundamental. If we do not have all of these, and his sin set off right thoughts here, then every- a chain reaction of terrible conthing else will be badly out of sequence that threw the whole focus. We need constantly to remind ourselves that the popular god of modern thought is not the God of the Bible. This 20th century creation is a wretched counterfelt of the true. It is soft, indulgent, and even fickle, view-Christ Jesus. He is the exercising a good-natured toler-

righteous, transcedent, omnipo- first Adam forfeited. tent, omniscient, and yet gracious. To know Him is the acme of all knowledge.

The Heart of the Lesson The meditative reading of these two psalms leaves us with | Editor-Stouffville Tribune, a fresh sense of awe. We feel Dear Sir, as though we have been in outer movements of its various forms of life. How insignificant it all

is! And yet, on the other hand, how significant also! This is all the mighty and skilled workmanship of a master workman. God in His wisdom produced it all, from the tiny mollusk of the sea depths to the flaming orbs of the skles: He knows all of these and provides for each one. All are dependent on His providence. Moreover, these all reflect His glory and manifest His wisdom.

As the crown of His work, so far as earth is concerned, man was originally given complete authority over the lower creation. Beasts, birds, and even aquatic creatures all took their orders from Adam before sin entered. He ruled as the viceroy Among the great themes of of the Creator Himself. Everything, without qualification, was fair scene into dislocation. Ever since that black day "the whole creation groaneth" (Romans 8:

But God has another man in unfallen man, the last Adam, ance toward evil and a semi-in- who, upon His return, will reign difference toward human affairs. over the restored creation, and The true and living God, on will exercise all the beneficent the other hand, is infinitely authority and grace that the

It all depends on where you sit. Years ago, I used to be bitterly critical of the newspapers. gence to see that editors were craven, afraid to publish the truth. It was obvious that their policies were dictated by their advertisers, that publishers were interested only in profits. I'd have written them some pretty fierce letters on the subject, I can tell you, but they probably wouldn't have printed of the future. them anyway.

I found out that editors were absolutely fearless, dauntless downtown about 4.30 each day. and selfless; that they were idealists, devoted to progress and the betterment of the com- how many days they worked, munity; that they cared nothing about money, if a principle were at stake.

During the same period, discovered that newspaper subscribers were irritable, unpredictable and impossible to please -that they were demanding, and would not write a letter to him unless they had an axe to grind.

operations of various organizations, from the fall fair board to the tourist association. I sug- sheer love of it. gested they were poky, somnelent, antiquated. I claimed that they needed new ideas, a better sit. system. I inferred that the executive was asleep at the switch and badly in need of new blood.

Invariably, at the next annual meeting, I would be elected to the board of directors of the organization. Within a year, I would have found out that a few harassed officers were doing all the work: that you practically had to use a gun to collect annual fees from the members; and that the latter's chief pleasure in life was criticizing the executive on street-corners or in saloons.

I remember when I used to be an ordinary, complaining, irate taxpayer. I felt nothing but the utmost contempt for the stupidity, the narrow-mindedness of the members of the town council. Their callous neglect of such vital problems as resurfacing the street on which I lived was little short of criminal.

Then, one winter night, halfdelirious from the 'flu, I allowed the annual nomination meeting. on the town council. I was shocked and disgusted, during my term in office, at the pettiness, the orneriness, and the utter disregard of the fundamentals of municipal economy, that existed among the taxpayers.

During one phase, I was certain that raising beef cattle was the ultimate in easy money. You just bought some cattle, put them on the grass, sat back on of them form layers of iron the porch and watched them swell into big, julcy sirloins at | then paint over and are safe for \$1 a pound.

Then I learned that it goes like this. You buy some cattle in the fall, at 23c a pound. You feed them \$500 worth of hay, and pump water to them all they occur. The primer goes on winter. In the spring, you put them out to pasture. One falls breaks his silly neck. Another er of zinc over the scratch. expires horribly, after eating a broken beer bottle that somebody threw over the fence. A 3rd comes down with the bloat. But they've gained 100 pounds each, and you can still break slightly oily. even. So you ship them to maryou a net profit of minus \$700. | way through from below, you're | will rust.

If you're the worrying type, try worrying about rust. It's one of those things that seem to happen no matter what you do to stop it.

At this very moment it's probably chewing chunks out of your car, gnawing at your porch railings, eating away at your drainpipes.

Usually you don't notice rust until considerable damage has been done. A small break occurs in a film of paint, chrome, etc. Rust spreads underneath and by the time the paint has bubbled out and begun to flake off there's a large patch of hidden damage.

This is the common form of rust — a burning-up of metal which has been exposed to molsture plus oxygen.

Another type is electrochemimy name to be put forward at | cal corrosion. When different kinds of metal come together-For the next two years, I served | say, bolts and washers of different material-and moisture is added an electric current is set · up and one of the metals rusts away quickly.

> The immediate answer to rust of course, is to scrape it off A rotating wire brush on an electric drill will take off heavy deposits on railings, etc.

But how do you prevent further damage? There are various kinds of rust inhibitor. Most phosphate over the wound. You a while. But any new scratch will break the iron phosphate

layer and start trouble again. Cold galvanizers use the electro-chemical process described above to heal rust wounds as like paint but when scratched and moistened the electric pro-

systems are fighting for sur- which has been losing money. vival in a modern era which does does not entirely support them in their present form, yet cannot get along without them.

Between them, the Canadian Pacific Railway and the Canadian National Railways contro more than 40,000 miles of track The only large railways not controlled by these two giants are the Ontario Northland Rail-

way and the Pacific Great Eastern. The ONR, owned by the Ontario government, and the PGE, property of the British Columbia government, both are run with an eye to profits, but both are primarily development lines. Since neither operates outside its own province they are not severely affected by the principal factors now making life economically difficult for the CPR and CNR. 1960—Year of Crisis

In a large way, 1960 is a year of crisis and decision for both the privately owned CPR and the publicly owned CNR.

In Montreal, a conciliation factor. In line with this, a first board has been considering demand for higher wages by of four cross-Canada runs daily, 116,000 of their employees-a demand which the two railways said would cost them an initial \$65,000,000 annually.

quiry into the whole structure of railway revenues.

Thus on one hand there are rising costs - wages represent about 60 per cent. of all railway expenditures-and on the other hand slower-mounting revenues. which the railways hope the commission may do something to rectify. Fixed charges are another

burden. The CNR bears a heavier proportion of fixed charges than the CPR, largely because of debts assumed as the publicly owned system acquired and amalgamated bankrupt lines. Passenger Traffic Down Passenger traffic has always

been a less important revenue producer than freight, but it is the part which is in deepest trouble and which perhaps has shortest future.

Mass-ownership of the automobile and development of bus and air travel has sharply curtailed passenger business for the railways. This business has been a long time in dying; the railways say passenger traffic has not been a profitable business since the 1930's.

Since 1945, while the population of Canada has been steadily growing, the number of railway passengers has steadily decreased. The railways in 1956, for example, carried 14,500,000 "revenue passengers." By 1959 this had dropped to 11,600,000.

In 1945, the CNR'S "revenue passenger miles" amounted to 3,068,700,000. By 1959 this had shrunk to 1,171,000,000. Rail Share Small

Appearing before the House of Commons railway committee last March, Donald Gordon, CNR president, produced a chart showing the railways' share of inter-city passenger traffic in Canada to 5.7 per cent. in 1958, compared with 18.3 per cent. in 1948.

The 1958 section showed cars carried a whopping 85.1 per cent of this traffic, buses 4.3 per cent and airlines 4.9 per cent.

Graphic indicators of falling railway passenger traffic are deserted stations in small communities. Both the CPR and CNR are preparing figures on just how many stations have been closed, and how many routes have been dropped, for presentation to the royal commission on transportation later this year.

This situation is another cause of the railways' difficulties. Before they can drop a route or decrease the frequency with which it is served, they must, operating as a public service, apply to the Board of Railway Commissioners for permission. Public Opposed

And such an application usually causes a public outcry mostly, the railways say, from people who do not use trains. To many communities the loss

of regular railway service still means a loss of prestige. Community groups seeking to attract industry feel potential investors may regard the loss of train service as a sign the community is dying.

The railways' experience with this has been the same whether they are seeking to drop small communities from the schedule of a transcontinental train to increase its speed, or simply to

in trouble. You can poke holes in the car with one finger. I have tried amateur body-

work with plastic patch kits and found them very effective. You first cut away the rusted area with a hacksaw or snips. If it's into a crack in the rocks, and cess forms a new protective lay- small enough you can slap the plastic patch on against a back-

For big holes I used sheets of galvanized metal from the hardware store, screwed on over the place by keeping them clean and holes with self-tapping screws or small bolts and nuts. I removed the screws with a sander. ket in the fall. And that week, begins to get rust patches. This spread plastic body filler over the bottom drops out of beef is inevitable. But when rust the new metal and sanded it prices, and they go under the spots appear on the outside smooth. It worked well. But hammer at 18c a pound, leaving bodywork, having eaten their eventually, like everything else,

Canada's two largest railway | cut a shorter commuter run, are probably the only profitable routes at present.

### Curriculum Changes mous cost; both have bought Due Says Robarts

Changes are being planned in the Ontario school curriculum, Education Minister Robarts said A variety of changes to make in a report released recently.

The entire science program is under examination. New courses of study for grades 7, 8, 9 and 10 have been prepared and will be introduced gradually beginning in 1961.

A committee is revising the grade 13 course in biology and this fall another committee will begin revising the grade 11 physics course.

The department is also examining the whole question of secondary school mathematics. As an initial step, some 36 schools will participate in an experimental program this year to determine the value of such a program for grade 9 classes.
