TIPS ON WINTER COW CARE

Here are a few tips that can help your herd come through the winter in good condition and with good production:

Ventilate: Cow comfort calls for a well ventilated barn and temperature ranging from 45 to 60°.

Warm water cuts feed bill. Check water heaters now to be sure they are working. If water is cold they won't drink enough for top production.

Sanitation is extremely important during cold months. Clip around udder and flanks to make cleaning easier. Keep clean bedding under cows.

Look for lice. They're troublesome at this season. Dust Purina Hog and Cattle Dusting Powder on cows and rub into hair.

Wash udders before milking. This is not a substitute for clipping. Use Purina I-Dairy or Purina Disinfectant solution on udders, hands and equipment to keep bacterial count low.

Feed Purina Milking Chows that are designed to give you the best possible production and condition from your milking herd at this time of year.
