TIPS ON GETTING YOUR HEIFERS INTO PRODUCTION EARLY

Purina's calf feeding program is designed to bring your heifers to first-calf condition earlier. This means savings for you in shorter feeding time to productivity, and up to 8 months extra milk production per cow later.

In stable, feed all the good hay they will clean up. Do not feed silage until a year old. Silage is too bulky, it takes too much room in the calf's small stomach and doesn't give the "grow power" your calves need. From 4 months of age until 3 months before freshening feed 3 pounds of Purina D & F Chow per head, per day.

Supplement your pasture. Tests show that heifers turned to pasture at 6, 8 or 10 months of age and allowed no other source of feed made very slow growth. They gained only 53% of normal standard of growth. Three pounds of Purina D & F Chow per head, per day will help get your heifers to breeding weight four to eight months

earlier, and will build sturdy heifers with the capacity for making milk to the full extent of their bred-in abilities.

Breed according to weight. Breed Jerseys at 500 lbs.; Guernseys at 550; Ayrshires at 650; Holsteins and Short-horns at 750. The way to keep track of your heifers' weights is with a Purina weight tape. If you don't have one, why not give me a call. I'd like to tell you more about Purina's common-sense calf feeding program.
