

Do you want another 1,000 lbs. of milk from each cow?

We suggest you feed Purina D&F Chow.

Just 1 lb. of Purina Dry and Freshening Chow for each 100 lbs. of body weight pays off in extra milk production. Leading dairymen report that a dry cow properly conditioned with D&F can produce up to 1,000 lbs. more milk during the next lactation.

Purina D&F is formulated to help improve the condition of your dry cows—condition that results in stronger, healthier calves and increased milk production. Grains, protein supplements, vitamins and trace minerals are all Micro-Mixed to provide the precise balance of nutrients that builds improved body condition for top milk production. See for yourself how it pays off in good milk production. Order some Purina D&F Chow from your local Purina Dealer.

all-new Uni-System!

four self-propelled harvesting implements  
all using the same rugged Power Unit!

New Idea's Uni-System is the modern concept of harvesting machinery — combinations of interchangeable processing units, all carried, powered, and propelled by a single Power Unit. Just one investment in engine, transmission, wheels and tires — converting quickly from one harvesting unit to another, depending upon the crop. Here's how it works.

Start with the Power Unit, choice of 206 cu. in. or new 244 cu. in. engines — both featuring hydraulically controlled variable ground speeds (3 forward, 1 reverse), control tower visibility, and "easy on — easy off" Uni-System interchangeability. Then, select the Uni-System harvesting units you need. For small grain and beans, you have the Combine — with either an 11-foot or 13-foot grain platform. For shelled corn you add a Cornhead. Just one Cornhead (with all the big capacity features of New Idea's famous Superpicker) to serve as the gathering unit for the Uni-Picker, Uni-Sheller or Uni-Combine. It's that simple. Only one investment in a Power Unit — then, your choice of interchangeable processing units to assemble up to four different self-propelled harvesting machines!

Uni-System combine with big capacity grain platform to 55-bushel grain bin. Features extra-heavy concave and the strongest cylinder in the business! Does superior job in small grain and beans in all field conditions.

Uni-System combine with cornhead for top performance in "corn country." Greedy Superpicker Cornhead has specially designed snapping rolls, and double auger elevators to carry the ears. All fast.

Uni-System picker for clean 12-roll husking bed, biggest on the market. Special presser wheels with 112 moving rubber Flex-Fingers align the ears and keep them moving along the husking rolls. You get cleaner corn.

Uni-System sheller, world's only self-propelled sheller capacity. It lets you control the length of time the ears stay in the shelling cage. Delivers cleaner corn, fewer cracked kernels to go to bin.

\*New Idea 2333 FINANCE PLAN — Even if you buy the Power Unit and all available Uni-System harvesting units, your down payment is only \$2,333 cash or trade. AND, after you've made one seasonal payment, you can buy additional Uni-System machines with no down payment!
