Super Brute, '74.

This is what better engineering looks like.

At Alouette, "better engineering" isn't just a catchphrase. The new Super Brute, for example, combines advanced design with dozens of detail refinements:

The chassis **1** is all-aluminum, one of the lightest built, with race-proven front-end structure. The front-mounted Sachs engine; **2** gives a low centre of gravity, for easy handling.

The new transmission includes a special heavy-duty chain **3**—running in a cast aluminum chain case, and double-sprocket, free-wheeling "track-drive" **4** for minimum power loss.

Then there are Alouette's exclusive Ski-Sorber™ suspension **5**, with a new wide stance. And our slide suspension **6**, adjustable to your weight, and to snow conditions. Plus a track tunnel **7**, designed to be self-clearing, not clogging.

We could go on, about the new handlebar control module **8** with a headlight **9** that swivels to throw the beam where you're turning. About the wrap-around windshield **10** that gives more protection. About the adjustable controls **11** and posture-controlled seat **12** that makes this a really comfortable machine to drive.

But we'd rather you saw the Super Brute for yourself, at your Alouette dealer's. Look at the engineering—the harder you look, the better it looks. You'll see that we're not putting you on when we say Alouette delivers.
