Resilient Flooring has changed...

ultra-simple installation techniques

ULTRABAC

Developed exclusively for the carpet industry by Dow Chemical Limited, ULTRABAC is the product of over eight years of exhaustive developmental research and thorough market testing.

Unlike conventional backings, ULTRABAC is a specially developed urethane sponge rather than a foam. But perhaps the greatest difference between ULTRABAC and conventional foam backings is its density. And it is this extreme density that gives you the advantages of:

noise level reduction

ULTRABAC gently softens room noise and greatly reduces sound transmission through the floor.

Improved Insulation

ULTRABAC improves the insulation of a floor, thus conserving energy. Today that's an important plus!

easier cleaning

The exclusive tuftlock system, means that ULTRABAC carpets have the strength to keep on looking terrific... even after hundreds of cleanings.
