May Wheels

Fuel consumption goes up one per cent if you go speeds over 90km

(NC) You've got the kids, the bags, the bikes, the canoes, the snacks, the dog, the kitchen sink... now all you have to do is jump in the car and step on the gas, right?

Well, no. Not quite so fast. If you want a hassle-free driving vacation this summer, here's an AutoSmart checklist to run through before heading out.

● Check and, if necessary, change engine

oil and oil filter.

● Top up windshield washer fluid

● Give your car a visual once over (don't forget to look for evidence of leaks under the car)

● Check and, if necessary, adjust tire pressure - check the decal on the rear edge of drivers door or glove compartment, or consult

owners manual for correct pressure levels.

● Check pressure of spare tire.

● Check and, if necessary, top up engine coolant, power steering, automatic transmission and brake fluid levels

● Inspect, and if necessary, replace windshield wipers

● Lubricate all hinges, latches and locks

● Check all lights and don't forget the horn

● Check and tighten all belts, hoses, clamps

With this checklist it attended to you can now jump in the car and enjoy a truly jolly holiday.

Fuel consumption

If your summer holiday involves any driving, consider this: research has shown that the single most important factor influencing fuel consumption is average vehicle speed.

Most cars operate at top energy efficiency when going between 80-90 kilometers per hour.

At highway speeds, ever km/hour over 90 km increases fuel consumption by one percent. This is primarily due to wind resistance which rises greatly at highway speeds. Increasing your speed to 110 km/hour from 90 km/hour will increase fuel usage by some 20 percent.

Earn up to 500 bonus AIR MILES.

Check out the tire values below. We've got what your vehicle needs, plus bonus Air Miles.

"Is this the face of a happy Air Miles collector? Yes!"

500 BONUS AIR MILES on a set of four
