# All new cars, vans and light-duty trucks sold in Canada will display the EnerGuide label

NC —When new car buyers head out onto the dealer's lot, they'll see that the sticker price isn't the only price on the side window.

In fact, the listed price of a new vehicle is just the beginning, and these days, everyone is looking for the best deal they can get.

Canadians now have a valuable new tool they can use to find a real bargain when buying a vehicle.

By January 1999, all new cars, vans and light-duty trucks sold in Canada

will display the EnerGuide label for vehicles. The new EnerGuide label is similar to EnerGuide labels on new stoves, fridges and dishwashers.

The label will be posted on the side windows of new motor vehicles or included on the specifications and price list.

The EnerGuide rating is based on the results of standardized test procedures to calculate a vehicle's fuel efficiency. City and highway fuel consumption figures (L/100 km and

mi/gal) are clearly listed in an easy-to-read format.

The figures are also converted into annual-dollar amounts, so new car buyers can compare the fuel economy of different model vehicles.

If labels are missing, dealers should be able to produce them or at least provide the manufacturer's approved fuel consumption ratings.

It's a good idea to go to the dealer as an informed consumer. At-home comparison shopping for a new vehicle is

easy, thanks to the 1999 *Fuel Consumption Guide*. People can use it to find out which models are gas guzzlers and which ones will be economical to drive. *The Fuel Consumption Guide* is available from most new car dealerships, motor vehicle license bureaus, the AutoSmart web site (<http://autosmart.nrcan.gc.ca>) or by calling 1-800-387-2000.

## CL from Mercedes-Benz offers superb driving performance

FROM PAGE 16.

For years, automotive engineers have dreamed of active suspension to counter-act the body roll caused by cornering.

Other automakers have tried such systems, with debatable results, since viable active suspension depends on advanced electronic controls and very fast-acting hydraulic servos at each wheel.

Along with the standard Electronic Stability Program, the new Mercedes-

Benz CL coupe will feature Active Body Control, a high-performance active suspension system that virtually eliminates body roll and pitch during cornering, braking and acceleration.

The driver will experience the benefits of ABC not only in terms of

superb, sporty handling, but in a new level of ride comfort, as well.

ABC makes use of high-speed servos and sensors to give the system its split-second reaction time.

Exceptional aerodynamics (a drag coefficient or CD of 0.28) and intelligent lightweight design contribute to superb driving performance.

Active Body Control makes use of high-speed servos and sensors to give the system its split-second reaction time.

**FIGHT OVER 100 DISEASES WITH ONE DONATION**

These are just a few of the over 100 liver-related illnesses that threaten the lives of more than 2 million Canadian men, women and children. For 25 years now, the Canadian Liver Foundation has been leading the fight against liver disease and to continue, we need your help. One simple act of kindness can go so very far.
