JUPITER
Are you still at risk for a Heart Attack or Stroke?
Recent research suggests that a simple blood test may show inflammation of the arteries, which may be an early indicator of cardiovascular disease - even in people with normal or low cholesterol. A local doctor is conducting a research trial to evaluate if a drug, currently available in Canada, will lower the risk of heart attack or stroke.
Qualifications for the study include:
• Men must be at least 55 years of age
• Women must be at least 65 years of age
• No previous history of heart attack or stroke
Qualified participants will receive study related medical evaluations and may receive study medicine.
