You lead a healthy, active lifestyle.

Are you still at risk for a Heart Attack or Stroke?

A local doctor is conducting a medical research study to evaluate if a drug currently available in Canada, will lower your risk of heart attack or stroke. Recent research suggests that a simple blood test, called high sensitivity CRP, may show inflammation of the arteries. This test may indicate a higher risk for a first-time heart attack or stroke.

Qualifications for the study include:

- > Men must be 55 years or older
- > Women must be 65 years or older
- > No history of heart attack or stroke
