Charges laid in fiery Hwy. 48 crash

BY JOE FANTAUZZI
Staff Writer

A driver is facing charges after a two-car crash in northern Whitchurch-Stouffville Sunday evening.

At 8:30 p.m., a Toyota Yaris travelling on Hwy. 48 just south of Vivian Road was struck head-on by a 1998 Plymouth Breeze with four young men inside, Ontario Provincial Police said.

Another driver told police the Breeze was travelling erratically before it slammed into the Yaris, police said.

The Breeze burst into flames and the men inside were able to make it to the east shoulder with minor injuries.

Whitchurch-Stouffville firefighters dispatched from the Ballantrae station moved

the Yaris away from the blaze and worked to free a trapped woman with the Jaws of Life.

Traffic was re-routed around the area for approximately four hours as both the north and southbound lanes of the highway were closed.

The Breeze's driver was arrested at the scene and taken to hospital.

Five others were taken to Southlake hospital in Newmarket. The woman was transferred to St. Michael's Hospital and a passenger from the Breeze was taken to Sunnybrook hospital.

The driver of the Breeze is charged with four counts of dangerous driving and consuming alcohol while licensed with a G2.

Think You've Heard It All?

by Lorraine Kennedy Vosu
Clinical Director/Owner
M.A., Reg. CASLPO Aud(C) Audiologist

TECHNICALLY SPEAKING

The high tech digital hearing instruments of today are decidedly interactive with the wearer's environment. For example, by sorting through incoming sounds, hearing instruments can focus on specific signals, such as a person's speech, and help block out unnecessary sounds, such as background noise. This can be accomplished in two ways, the first of which makes use of two microphones. One points forward while the other points backward. The signals received from these two microphones are analyzed, the direction of the incoming sounds is determined, and the appropriate sounds are amplified or de-amplified. The second type of digital technology distinguishes between speech and noise and simultaneously adjusts for their differences. Why not give the new hearing instruments a try?

If you experience diminished hearing, you don't have to change your life's activities to accommodate your hearing. Please call us to schedule a hearing evaluation that includes an audiometric test of frequency-specific sensitivity, speech reception test, word recognition test, and loudness test. Today's hearing instruments combine sophistication and affordability. It's important to practice using your hearing aid and have follow-up visits to make adjustments. Our staff is composed of some of the country's most trusted and experienced audiologists. For every new hearing system you purchase, we'll give you a 35-day evaluation period.

P.S. Hearing instruments address the most common form of hearing loss: sensorineural ("nerve deafness").
