

Vandorf Subway Held Up by Steel Shortage

The new subway passing under the railway line at Vandorf and which was commenced a year ago, still remains incomplete, and is being held up at present we understand, by a shortage of steel.

The fine 52 ft. wide structure has proved to be a long and slow undertaking. The half mile of the fourth con. on either side of the underpass is still unpaired awaiting completion of the subway.

Spillette and Cook in Race For Wardenship Of York County

The race for the warden's chair in York county council next year is narrowing down to a contest between Deputy Reeve, J.L. Spillette, Newmarket, and A. A. Cook, reeve at Aurora. A third contender is Nelson Boylen, reeve of North York township, but there is a possibility that he will withdraw from the contest according to report in the Newmarket Era and Express.

Deputy Reeve Spillette is a veteran of Newmarket council on which he has served for 12 years, the last six of them as deputy reeve. Last year he was a county commissioner and took an active part in the county's fight against Toronto's annexation proposals.

He was chairman of the committee which drew up blueprints for an expanded county home at Eagle and Yonge sts. That proposal was shelved, however, because of the uncertainty resulting from the annexation hearings.

A successful appliance dealer in Newmarket, Mr. Spillette has seen many changes in council work since he was first elected.

If elected warden, Mr. Spillette will be the fourth deputy reeve to hold that office and the third warden from Newmarket in recent years. Fred A. Lundy, former reeve, was warden in 1946 and before him, J. O. Little, a deputy reeve at the time.

Here's why a further quarter of a billion dollars is being invested by Aluminum Company of Canada in

"OPERATION ALUMINUM"

Aluminum is being put to so many uses these days that Canada's aluminum industry, begun at Shawinigan Falls in 1900, and already grown to giant size, is embarked on another vast expansion program.

More dams, powerhouses, smelting facilities in Quebec... a whole new operation in British Columbia... these great forward strides will further step up Canada's aluminum capacity to a total of more than half a million tons a year.

Today the names "Peribonka" and "Kitimat" mean nothing to most Canadians. Right now they head blueprints — blueprints of work in the planning stage, of work in progress with thousands of men already on the job.

"Shawinigan", "Shipshaw" and "Arvida" were new names, too, many years ago. Today they are living reminders to Canadians — and to the world — that Alcan has grown, developing this country's resources so that now it produces a quarter of the world's aluminum supply.

On the Peribonka River in Quebec, Alcan is harnessing two cataracts — Chute-du-Diable and Chute-à-la-Savanne. These will provide hydro-electric power for a big addition to aluminum output and additional power resources for the Saguenay District.

Meanwhile, up coast 400 miles from Vancouver, a whole new aluminum operation is planned. Where now stands the tiny Indian village of Kitimat, a whole new town will be built; here Alcan will construct a huge smelter. At Kemona, 50 miles away, Alcan will build a powerhouse inside a mountain; a ten-mile tunnel through this mountain will carry water from a chain of lakes down a 2,600 foot drop to develop an eventual 2,000,000 h.p. capacity.

This "Operation Aluminum" means jobs for thousands of Canadians. It means additional millions of dollars coming into this country from abroad, for much of this aluminum will be exported.

It means additional low-cost aluminum for Canada's own use — metal which a thousand plants throughout the country use to fashion everything from utensils and toys to airplanes and bridges.

"Operation Aluminum" is a big thing for Canadians and for the free democratic world. It means a further line of defence against aggression. And it means a busier, more prosperous country in which to live and work.

Aluminum Company of Canada, Ltd.

Producers and Processors of Aluminum for Canadian Industry and World Markets.
PLANTS AT Shawinigan Falls, Arvida, Isle Maligne, Shipshaw, Port Alfred, Beauharnois, Wakefield, Kingston, Toronto, Etobicoke

IN BRITISH COLUMBIA

Project as planned calls for expenditure in the first stage of \$200 million, the final stage when completed will increase this to \$550 million. First stage to be completed 1954.

KITIMAT SMELTER
Capacity one billion pounds of aluminum a year.

Lake, above Nechako River Dam, 500 square miles in area.

Kemona powerhouse, to be built 1/4 mile inside mountain. Eventual capacity 2,000,000 h.p.

50 YEARS AGO
the company's first smelter opened at Shawinigan Falls, and produced 130 tons of aluminum that year. The metal was just starting to make a market for itself.

TODAY
Alcan has 4 smelters — at Arvida, Isle Maligne, Beauharnois and Shawinigan Falls — with a capacity of nearly 500,000 tons. And this light, strong, non-rusting metal has found an almost limitless range of useful jobs to do.

IN QUEBEC

CHUTE-DU-DJABLE
250,000 h.p. installation. Begun autumn, 1950. Will be in operation May 1952.

CHUTE-À-LA-SAVANNE
250,000 h.p. installation. Begun summer, 1951. To be completed in 1953.

ISLE MALIGNE
Smelter. Output doubled. Construction underway.

BEAUHARNOIS
Smelter. Re-opened April, 1951.
