WOMAN'S GARB

DRESSMAKERS DISCUSSED CORSETS.

Gowns Which Will Adorn Perfect Figures - Many Will Be Developed in Velvet.

New York, Sept. 19.—One of the principal subjects of discussion at the American Dressmakers' Association, which closed its sessions here a few days ago, was that of corsets; therefore the perfect form will be the objective point toward which the energies of American modistes will be directed during the coming season.

And indeed physical culture has done so much toward the attainment of this aim that the difficulty will be appreciably lessened. What the physical culture fails to do however, it is intended that the corset shall make up.

The latest vogue for corset-land is a delightful affair, which is calculated to keep up the diaphragm, without restricting it, force the stomach in and increase the back hips.

The result of such a corset is not only a perfect fit, but an exceedingly chic exterior effect, and as one of the members of the association put it, you are as happy on the inside as on the outside.

Popular inclinations toward the lustrous fabrics and even cloths, which are listed among the smart materials, are most highly finished. There are rough surfaced materials, of course, but these are more for general use, and even they are stitched plentifully with bands of smooth-faced goods.

The spotted patterns distinguished as leopard effects are smart and extremely pretty. The colorings too, are more than two tones are seen in one gown, and the trimmings correspond with the figures scattered over the usually lighter shade background.

For instance a frock of cerise tan, with a slightly reddish tint, is spotted with autumn leaf brown figures. The skirt is built with medium-sized plaits at the back, and there are in-verted plaits at each side of the front.

The vest of the jacket is composed of exquisite cream lace striped with panne, and the jacket bears inverted plaits at both the front and back.

The popular position effect is shown in the sleeve which is held above the wrist by two large military buttons.

Completing the costume is a flat, spreading picture hat of cerise panne velvets with a crown of autumn leaves finished at the back with roses of liberty satin ribbon.

Of course the cost of such a gown makes it impossible for the woman whose dress allowance is limited to a few dollars for an entire season's supply, but there are much less expensive fabrics duplicating the same effect, which may be made up very artistically if one has the patience to execute the various little details shown in the original design.

After all there is not much elaboration upon the new season's gown as there is detail. It is the small things that count in time as well as cost, but they really constitute the success of a gown and must be added if one would be strictly in the mode.

These indications lead to the belief that this autumn will be an exceptionally mild one, and for that reason it will be late before wraps are donned. However, many smart little jackets will be worn, and brown, black, and green, purple-blue and red, will be much in vogue.

One delightful, little, the basque-jacket, carried out in Duchess of Marlborough green—a soft, dark tone, affected by our little American duchesses during her recent visit here—displays a very full blouse, which opens over a vest of hand-painted lace. Black silk frogs are set on either side of the waist on the material, and form a drapery of silk cords across the front.

Painted lace is one of the extravagances of the season, but it will be worn more than is generally imagined because there are so many women of artistic talent who can design these patterns for themselves with little expense. Embroidered laces are also de rigueur, but only the expensive varieties are treated to this form of decoration.

Women who feel that they cannot afford the luxurious velvet gown, may be consoled by using the fabric as a trimming. A pretty way in which it may be used is shown in a rich petticoat cloth, the skirt being trimmed just below the knees with three rows of velvet to correspond; set on loosely and not stitched down. At the front the tucks are very narrow, but aggregate wider behind, while on the hips is a simulated rounded basque of the same trimming.

The bolero is patched over a narrow waist-band and has a small roll of collar and cuffs of the velvet.

The greatest variety is shown in sleeves, but the voluminous effect below the elbow is apparent in all. This effect, however, is invariably graceful. Tucks, appliques and various little decorations employed to dispose of any fulness are all placed at the top of the sleeve and between the elbow and the wrist there is simply a substantial expanse of the dress material which envelops an undercut of some diaphanous fabric.

The short-necked sisterhood will rejoice in the fact that collars are all lower than for the past few years and are finished off with narrow lace, for such a garniture always lends to the toilette a dainty air. After all there is no real beauty in the "three-story and basement collars," as one cynical man described one of the summer choikers. It certainly robs the neck of grace and gives one a strained, uneasy appearance.

The bolero and the shape popular favor with velvet until late in the season. It is almost always lace trimmed and generally made into a smart box-plaited coat. This coat is cut with fronts and backs only and shaped and fitted by means of under-arm and shoulder seams. The skirt is laid around the figure. Under the coat is a fancy waist is worn and the coat is finished with a deep cream collar of rennaissance or duchesse braid.

NEW WAR SHIP

LAUNCHED WITH IMPOSING CEREMONIES.

Miss Clara N. Carleton Severed the Cord That Allowed the Big Boat to Slip Into the Water—One of the Biggest Ships of the Navy.

Boston, Mass., Sept. 20.—There was launched from the ways at the big plant of the Fore River Ship and Engine company, at Quincy, today, the largest war vessel built in Massachusetts since the early days of the American navy—the steel cruiser, Des Moines, a sister ship to the Denver.

The launching was, in many respects, the most notable that has ever taken place in this vicinity; it was, moreover, one of the most beautiful and imposing. There was something curiously inspiring in the scene—the mass of mounded metal rushing headlong down the greased ways, the fluttering of thousands of handkerchiefs and the cheers from thousands of throats, the music, the ceremony.

The available space about the ways was packed with enthusiastic humanity. Work was suspended in the yard, and thousands of brawny workmen mingled with the great crowd. On the christening stand was a distinguished party from Iowa, including Governor A. B. Cummins and his staff, other state officials and representative citizens of Des Moines. The national capital was represented by high officials of the navy department.

It was shortly after twelve o'clock when Miss Clara N. Carleton, of Hawthill, severed the cord and the big ship started on its journey down the ways. It was an instant after the ship began to move that Miss Elsie McComber, of Des Moines, flung the christening bottle against the vessel's bow.

The ship was moving rapidly when she was swung around and anchored in full view of the assembled crowds. A mighty cheer went up from thousands of throats, and simultaneously there was a deafening roar from the whistles of tugs and other craft in the vicinity.

The cruiser Des Moines is similar in design to the Cleveland, the Tacoma, the Chattanooga, and the Denver. Her total length on the water line is 292 feet; length over all, 308 feet 9 inches; molded beam, 43 feet 3 1/2 inches; extreme breadth, 41 feet; free board forward, 20 feet; free board aft, 18 feet 6 inches; mean draft, 12 feet 9 inches; displacement, fully equipped for sea, all stores on board and a normal supply of coal—3,200 tons; full load displacement, 3,500 tons.

The Des Moines has triple expansion engines, which will furnish 4,700 horse power, and which will enable her to show better than 20 knots per hour. Her coal capacity with the bunkers full is 700 tons, which will give a steaming radius of 10,000 miles, or allow her to cross the Atlantic three times without refueling. At full speed her coal-burning radius will be 2,600 miles.

The main battery of the Des Moines will consist of ten five-inch, fifty-calibre breech-loading, rapid-fire guns. The secondary battery will comprise eight six-pounder, rapid-fire guns, two one-pounder, rapid-fire guns, and four automatic Colt's machine guns.

Coal with an estimated capacity of 6,750 cubic feet, will be used as an obnoxious material for the water line protection, so that if the hull should be pierced by a shot the swelling of the coal pit placed between the outer and inner plates will prevent the ingress of the water.

The building of the Des Moines was authorized by an act of congress on March 3rd, 1899, and on August 25th, 1900, the keel was laid in the Fore River yard, the newest shipyard in the country, where also the largest seven-masted schooner in the world was recently launched. According to contract, the Des Moines will be ready for duty on the government June 11th, 1905, and will cost \$1,965,000.

INCIDENTS OF THE DAY. Newsy Paragraphs Picked up by Reporters on Their Rounds.

The Canadian Trades and Labor Congress, meeting at Berlin, Ont., this year, will assemble in Brockville in 1903.

Yesterday Anthony McGuire had shipped from Renfrew, 500 sheep and lambs, which will go to supply the city market.

Miller's Headache Powders cure headache in five minutes. In boxes 10c. and 25c., at Wade's drug store.

QUEEN'S NEW PRINCIPAL.

What Some of the Newspapers Say of Him.

Hamilton Herald. Rev. Dr. Barclay, the new principal of Queen's university, enjoys the reputation of being a great athlete, and his appointment comes in good time to enable him to coach the Queen's football team.

Toronto News. The appointment of Rev. Dr. Barclay, of Montreal, to the position of principal of Queen's university, Kingston, will be received with satisfaction in all quarters where Dr. Barclay is known.

For many years the new principal has been recognized as one of the ablest pulpit orators of the day, but to those who know him Dr. Barclay's fitness for his new position lies more in the intellectual size and breadth of the man, than in his ability as a preacher. In addition to being a deep thinker, with a wide and cosmopolitan knowledge, he is essentially modern and progressive in his ideas, and fully seized with the necessity of training both mind and body in order to secure the best results in fitting men for the modern struggle in life.

The Presbyterian trustees of Queen's will lose nothing through its new principal, and it is possible its present scope of usefulness may be materially broadened and extended by the introduction of the modern methods in education to which Dr. Barclay is so firmly wedded. A more worthy successor to the late lamented Principal Grant it would have been hard to select.

Mail and Empire. Various views have been expressed touching the choice of a successor to the late Principal Grant, who presided for so many years with distinction over the destinies of Queen's university. The question was certainly one which opinions might differ, for Dr. Grant was a man of unusual powers, combining the qualities of the statesman, the administrator, the publicist, and the orator. Looking over the field, it was not easy to determine upon whose shoulders his mantle could appropriately and fitly fall.

There is no doubt, however, that in the selection of Rev. Dr. Barclay, of Montreal, the trustees have been wisely guided. Many who have discussed the subject have felt and have declared that in that distinguished clergyman Queen's would have a principal worthy alike of its traditions and of its work. Principal Barclay brings to his task a splendid scholarship, desirable administrative abilities, and a high reputation. Educated in Scotland, and graduating with honors, he passed to important positions in the pastoral work of the church. So highly was he regarded that he became one of the chaplains to her Majesty Queen Victoria. Montreal long ago placed him among the leading divines of that city, for he is eloquent in the pulpit, and broad-minded and public-spirited everywhere. On occasions when he has participated in the discussion of affairs relating to Canada and her position in the empire, he has given expression to views that are lofty and patriotic. There can be no doubt that Dr. Barclay, in taking up the work which his eminent predecessor conducted so successfully for years, will be guided by the devotion to Queen's which was so thoroughly characteristic of Dr. Grant. Under his direction the institution will, in our educational machinery, cannot fail to maintain and even add to its influence.

Would like to ask, through the columns of your paper, if there is any person who has used Green's August Flower for the cure of indigestion, dyspepsia and liver troubles that has not been cured—and we also mean their results—such as sour stomach, fermentation of food, habitual constiveness, nervous dyspepsia, headaches, despondent feelings, sleeplessness, in fact, any trouble connected with the stomach or liver? This medicine has been sold for many years in all civilized countries, and we wish to correspond with you, and send you one of our books free of cost. If you never tried August Flower, try one bottle first. We have never known of its failing. If so, something more serious is the matter with you. Ask your oldest druggist.—G. G. Green, Woodbury, N.J.

An Unenviable Condition. To eat a hearty meal without injurious after effects is a pleasure that seldom comes to a dyspeptic. He cannot enjoy his dishes and is fearful to eat what is best relishes. Iron Tonic Pills will positively cure dyspepsia, indigestion and headache. Each box contains seventeen days' treatment. Price 25 cents, at Wade's drug store.

"Bibby's" Oak Hall. "Bibby's." It's up to you. If you want the best underwear for the money, or even the best underwear come here, 25c. to \$2.50. The H. D. Bibby Co.

Miller's Headache Powders cure headache in five minutes. In boxes 10c. and 25c., at Wade's drug store.

There are no more important organs of the body than the bowels. If they are irregular, health must be imperfect. Constipation is the common ailment of the age. Nothing is worse for the bowels than the frequent use of cathartics. They do not cure Constipation—they aggravate it. A laxative does cure.

IRON-OX TABLETS are a Gentle Laxative and a Tonic combined. The Ideal Remedy for Constipation. 50 Tablets 25 Cents.

Lost Appetite. When your food is not thoroughly well digested some of it remains longer than it should in the stomach and causes a great deal of distress. Acids are formed and bitter liquids are produced that attack the stomach's linings. Inflammations are set up. The consequent swelling of the linings of the stomach prevent the thousands of tiny gastric glands from exuding their resolvent liquids. Thus it is the disease is aggravated. The linings of the stomach involved in a chronic manner, become subject to dyspepsia. Powley's Liquefied Ozon reduces the inflammation of the stomach's linings, stimulates the membranes and gastric glands so they perform their work properly and naturally, and gradually restores a normal, healthy tone to the stomach. "For some months back I have been troubled with a sinking feeling. I had no ambition and my appetite and sleep were bad. When I would wake in the morning I would feel as tired as when I went to bed. I tried several kinds of medicine but did not get any better. I was told by my doctor that my lungs were affected. About this time I heard of Mr. McKay of Sutton, a man I very well knew, who was cured of lung trouble by Powley's Liquefied Ozon, so I commenced to use it. I felt an improvement from the first bottle. I have taken thirteen bottles and I know I feel better to-day than I ever did in my life. My belief is that my kidneys were not working properly, as my face was very yellow, and I would have terrible headaches. "I am feeling splendid now and gaining in flesh, so that all who know me can see the marked improvement, which I owe to Ozon." Yours respectfully, MRS. THOMPSON, 221 Sherbourne St., Toronto, Ont. Your druggist will tell you all about Powley's Liquefied Ozon, if you ask him. He'll tell you how you can take it for stomach disorders, and he'll also tell you how you can take it so as to prevent any kind of stomach sickness. It would be a good thing to ask your druggist about Ozon now. It's uses are many and valuable. 50c. and \$1.00 a Bottle, at all Druggists. THE OZONE CO., of Toronto, Limited, Toronto and Chicago.
