AGRICULTURAL

NEW METHOD OF MILKING COWS.

Another Use For Superfluous Milk

On The Farm—How To Treat Work Horses to Get The Best Results.

Poultry meat of all kinds is at a premium, and young hens, or indeed two-year-old hens, can at present be marketed to advantage.

In farming, as in other lines, it pays to be beforehand. Already many agriculturists are beginning to formulate plans for handling their 1903 crop.

The demand for good horses keeps up and really good heavy draft and general purpose horses are very scarce. It will pay farmers to breed good horses.

The juice of the sugar beet is twice as sweet as the sap of the maple tree, 100 lbs. of sugar beet juice yielding twelve pounds of sugar, while maple sugar will produce only four or five.

J. W. Newman, of Sault Ste. Marie, writes that that portion of Algoma which has been cleared away, and the brush becomes cleared away, that branch of agriculture will more and more be followed.

The Minnesota Experiment Station has come to the conclusion after many tests, that with prices in reasonable balance, bran, corn, oats and hay, make a more satisfactory ration for lambs than any being fattened, than bran, corn and hay.

The planting of trees around the farm home and the country school-house should be encouraged. A few trees set each year in odd corners, where they will afford shelter and ornament, will be a source of gratification for many years to follow.

The proposed tax of \$500 on Chinese men entering Canada meets with opposition from the farmers of British Columbia, who find that the celestial is the only available help they can secure for work on the farm. John makes a good domestic and a good cook.

Japan is said to offer a new market for Canadian products. Comparatively little, if any, of our staple farm products, such as wheat, oats, peas, etc., are produced in Japan. Canadian wheat and flour should find a large and profitable market there. The live stock industry of Japan is also worthy of attention.

J. B. Gridale, of the Central Experimental Farm, says that the final action upon the proposition to build a nurses' home.

A weather prophet to-day prognosticates rain up to Thursday or Friday of this week, followed by fine, warm weather for Victoria day.

On Saturday J. E. Hutcheson adjusted the loss by fire to stable and contents owned by Capt. Murphy, 1015 St. George street. The loss was placed at \$105.

Piston asparagus, Wolfe Island asparagus, Catarqui asparagus, Port-au-Pas radishes, Barfield spinach, all fresh Tuesday morning, at Carro's.

O. F. Telgmann returned to-day from the north, after having given successful performances of "Leo, the Royal Cadet" at Lanark, Smith's Falls and other places.

The owners of the steamer Wahoonah were greatly pleased over the quick time made by the Donnelly steaming company in raising that vessel last week. Forty minutes after the steamer Donnelly arrived at Plover's Point, a steam pump was placed aboard the Wahoonah, all ready for operations.

TO ERECT COAL CHUTE.

It Will Be One Of The Largest In Canada.

Windsor, Ont., May 18.—The Lake Erie and Detroit River railway, this morning, showed a distinct improvement over previous years, but declares that the coating of cheese with paraffine wax retards these necessary actions which allow the cheese to become solid.

The verdict of the trade is adverse to the continuance of the paraffine coating.

It is rarely that a summer comes in which there is not a drouth, causing failure of pastures and in the milk flow. For this reason it is wise to provide some soiling crop, as mixed grains, suds peas and oats, or corn, to be cut and carried to the stables and fed to the cows when being milked, or perhaps better at midday when the sun is hot and the flies troublesome.

A patch of alfalfa near the barns is valuable for this purpose, as it may be cut several times during the season.

On a great many farms at certain times of the year there is a superfluity of milk, which, during hot weather, sometimes becomes sour. As a rule this is fed to the pigs, but another profitable source of outlet will be found if sour milk is fed to poultry. Those who go in for chicken rearing on an extensive scale will find the advantage of storing a little milk for use, and the farmer need never be at a loss as to how to utilize his sour milk if he fattens a number of chickens.

A new method of milking has been creating some interest in Scandinavian circles. The main point of the method consists in following up the regular milking by a series of manipulations of the udder, which will remove all the milk remaining in the cisterns and ducts of the udder at the time of milking. The ordinary method of stripping fails to remove this portion, which is doubly valuable on account of its high fat contents. It is estimated that the increased yield of milk by this new method is about one to three pounds per day.

Removing the horse's harness at noon may seem unnecessary to the man who must hustle over at least six acres of corn with a walking cultivator each day of the season, but it pays. When sweat, hair and dandruff are allowed to congeal at noon on the side of collar and on skin of shoulders, and afterwards "hau out," when the animal is worked again, sores are sure to form. The collar should be removed, the shoulders washed with alum water or a solution of half an ounce of tannic acid in half a gallon of water.

The Crop Bulletin.

The May Bulletin issued by the Ontario department of agriculture contains the following regarding crop conditions on the 1st of May, 1903.

Fall wheat—In most instances it has come through the winter unharmed. The hurt caused by insects and frost has been remarkably small. The acreage is less than in the last year or two.

Winter rye—Very little is now grown in Ontario. What was wintered well.

Clover—The crop faces the spring with the best prospects. The dry, cold weather of April gave portions of the clover a brown appearance, but the meadows have a good thick bottom. In Western Ontario the prospects are particularly bright.

Live stock—Taken altogether the outlook may be classed as good. The general health of horses is satisfactory though there were a few cases of glanders and distemper. Cattle are healthy and have suffered little from any disease.

Fruit trees—Orchards have come through the winter in excellent order so far as weather conditions are concerned. The only damage to fruit trees between November and April was caused by a plague of field mice, the centre of operations being in the Lake Ontario districts and along the St. Lawrence. Thousands of valuable fruit trees have been girdled by these little vermin, and the correspondents regret their operations, as a serious menace to fruit culture. Small fruits give promise of an excellent yield.

INCIDENTS OF THE DAY.

Newspapers Picked up by Reporters on Their Rounds.

Tomato plants at Carro's.

Col. Hemming left to-day for Cornwall and other eastern points for a tour of inspection.

Leung's Y-Z (Wise Head) Disinfectant Soap Powder dusted in the bath, softens the water and disinfects.

C. Wesley Walker was removed to the General Hospital to-day, suffering from an attack of fever.

M. Cunningham, piano tuner from Chicker's, New York. Orders received at McAuley's bookstore.

James Scrutton, a machinist, had a slight accident, being cut at the Locomotive works to-day.

A large quantity of cheese was shipped from this point to Montreal to-day. About 2,000 boxes were sent out.

James Halliday left for Gannaque to-day to test the electric lighting plant on Charles Macdonald's new steamboat.

This afternoon, the General Hospital board of directors, with the final action upon the proposition to build a nurses' home.

A weather prophet to-day prognosticates rain up to Thursday or Friday of this week, followed by fine, warm weather for Victoria day.

On Saturday J. E. Hutcheson adjusted the loss by fire to stable and contents owned by Capt. Murphy, 1015 St. George street. The loss was placed at \$105.
