OFFICIAL REPORTING.

at the Campy Trial.

Mr. Nelson Butcher, the official stenographer of the Gamey investigation, made elaborate preparations for his task. Mr. Butcher has 16 of 10 or 12 experts, with other proof accidents. Even with so large a staff the most laborious and exacting labor will be required to carry out the contract.

Mr. Butcher himself remains court during the proceedings an takes most of the shorthand report himself. This occupies his time from 10 o'clock to 4. To extend notes he uses a Bettini instrument This is an electrical appliance, which works on something of the same principle as a phonograph. Mr. Butment, and this operation takes about the same time as the pro ceedings took in court, that is until about 11 o'clock at night. The Bet tini attachment, while Mr. Butcher is speaking into it, is connected to successive rollers, which reproduc his words as by a phonograph to two expert operators on typewriting machines, who made the first copies of the evidence. A few minutes after these two start working another relay begins making the copies their sheets, and in this way the 16 copies are complete before midnight. After that there are two or three hours' work verifying the report. This is done by reading the typewritten manuscript back to Mr. But-

cher, who follows his shorthand notes throughout The officials thought at one time of attempting to reduce the report to printing each night for the following day, but this plan was given up as impracticable owing to the limited time. Printed copies are, however, available on the second day

after each day's proceedings. Mr. Butcher has one or two Bettini instruments and several typewriting machines in reserve in case of accident, as a breakdown with such a limited time to work in would be disastrous. One of his type-writing machines is run by electricity-said to be the only one of its kind in Canada. It is a ponderous instrument, but the keys require only the merest touch to depress them and form the letters. Magnetism does the rest. The speed of the

machine is almost unlimited.

A Garden for Birds.

I knew a certain garden that was made solely to attract the birds, says a writer in Country Life, and it is in every way an unqualified success. It is free from murderous cats and small boys, and the birds like it. Thirty-four different species have been counted at a single time, and on one occasion 20 different species were building nests or rearing their The ground is deeply carpeted with

These supplementary stores are placed on a stand called "the birds' banquet board." About the grounds are scattered logs, under which bugs and worms huddle in the damp earth. Hydrants are left dripping, where birds may drink or bathe to their hearts' content. Strings, threads and cotton are hung about on bushes and trees, so that huilding materials may be easily accessible. Many of the birds become so tame and so wise in the ways of the place that when Mrs. Grinnell overturns a log they will flock to her like a drove of
