Fagged brains and tired bodies need rest and sleep as well as "FORCE."

"FORCE" will do a good deal, but it won't do it all.

Sunny Jim

"FORCE" contains all that is good (and nothing else) from the wheat berry which has been the sustenance of human life for a thousand generations.

Rich, Pure Blood, A Clean, Healthy Skin, and Good Complexion Within Reach Of Everyone.

Impurities in the blood will sooner or later lead to dangerous disease in some part of the body. The true blood purifier is Paine's Celery Compound.

Skin Diseases Cannot Resist The Healing Influence of Paine's Celery Compound

If you are sick and desire free medical advice, write to "Consulting Physician," The Wells & Richardson Co., Limited, 290 Mountain street, Montreal, Que.

Could Not Sleep At Night. Was All Run Down. Had No Appetite.

FOOD WOULD NOT DIGEST.

Mrs. I. W. Warner, Rterdale, N.S., is glad there is such a remedy as

Burdock Blood Bitters.

IT CURED HER AND WILL CURE YOU.

She says: "I wish to add my testimony to the many others who have spoken so highly as to the unfailling virtues of Burdock Blood Bitters. I was all run down, had no appetite, lost all ambition, had no sleep, and my food did not digest properly. I saw B.B.B. advertised, so concluded to give it a trial, thinking if it did no good it could do no harm. But after using one bottle I began to feel better, and by the time I had used three bottles I was feeling like a new person. I am so glad there is such a remedy provided for suffering humanity, and cannot praise it enough for I think there is no medicine like it on the market."

Advertised Responsibility. The very BEST of workmanship and the highest grade of Paints and Varnish.

ROUGH BUSH SURGERY

CUTTING A MAN'S THROAT IN THE AUSTRALIAN BUSH.

A Thrilling Story of Rough and Ready Experience in the Isolation of the Woods—The Patient Recovered—Some of the Common Methods of Attempting to Circumvent Accidents—Danger Due to Distance.

Bush surgery has methods peculiarly its own. Simplicity is its keynote. For a snake bite you cut the piece out of your leg with your clasp-knife, and continue your journey, says an Australian writer.

For a broken rib you tie a string round your waist. For toothache the treatment is to press a common knitting needle, heated white hot, against the exposed end of the nerve.

The patient is usually held down by two strong men for this operation, and sometimes pursues the operator with a gun for the next two or three days, but provided the knitting needle is used firmly and fearlessly a cure is certain.

For measles you sit down and smoke until you are well. I have myself nursed a whole family through the scarlet fever, though I knew nothing about the disease, and, indeed, know nothing about it now.

For bronchitis you blister the sufferer and turn him out for a week. The theory is all wrong, but it works in practice. People live a long time up country; there aren't many doctors here. I don't say there is any connection, but both are facts.

Of course, there are occasionally "regrettable incidents." If you give chloroform and apple dumplings to a man recovering from typhoid—why, he dies, that's all; and if a man tries to cut off his own arm with a hand saw, the chances are he makes a mess of it.

Should I try it there if it was a horse—for I know more about equine than human anatomy—not a valuable horse.

"We shall be tried for manslaughter, if it's a failure, won't we?" "Ah, I hadn't the thought of that," I said—the sufferer apparently had, for he gasped freely, "Law's a tricky thing."

"Ah, I remember now—just under the apple the throat!" exclaimed O'Shaughnessy, recalling his one piece of knowledge about the operation.

The whole thing turned out simple enough in practice. I held my breath and watched the doctor's hand as he worked about with the knife as if he were going to carve a fowl, thrust it through the skin under the "Adam's apple," fished out the butt end of the severed larynx and covered it with a handkerchief with a vague idea of keeping out microbes, but in reality this did some good in protecting it from dust.

I was surprised to see, not when on his rounds to keep a look-out for horses, cattle, or sheep "hung up" in the bush and liable to starve to death. Bush-killing is so dangerous, an occupation that insurance companies do not care to "take the lives" of men about to engage in it.

"Bush madness" and kindred complaints, the accidents common to horse-breaking and bush-killing, snake bites (in places), and diseases with an alcoholic origin are the principal practice of an up-country doctor. His surgical experience is limited, and he, therefore, operates on any patient who gives him the slightest provocation to keep his hand in.

Fortunately, the bushman is phlegmatic—I have known a shepherd who had to amputate his own finger with an axe, and give it to the dog at dinner-time to save meat. You will understand that things are rough and ready. A young doctor in Queensland not long ago spent sleepless nights for weeks in pulling a patient round, picked a quarrel with him during the convalescent stage, and shot him dead!

The above notes will partially explain how I came to assist in the cutting of my friend Mr. Johnson's throat. The scene was a shanty in the bush on the Australian coast, shaded by the customary eucalyptus and watered by the inevitable "creek." There were three of us, all young cadets—Johnson, the hero of the incident, O'Shaughnessy, an Irish gentleman of somewhat reckless disposition, as shall be disclosed, and myself.

Johnson, to gain some private ends, got diphtheria. As we were at the stage of creation a doctor's fee would have been several hundred pounds by the time he got there, and Johnson would probably have been dead long before. My only medical knowledge was a slight acquaintance with the extraction of teeth, and this was of little use for diphtheria. O'Shaughnessy, however, had some experience of the disease, or said he had, and immediately proceeded to "do so."

So much so that one night Johnson was gasping for wind, and at the point of death. "What's to be done?" I asked O'Shaughnessy, who had just come in.

"Tracheotomy!" he decided at once in an offhand manner. "Do you know anything about it?"

STORY OF GOLD PIONEER

BIT OF HISTORY TOLD BY MR. JAMES MOORE, OF BRITISH COLUMBIA.

The Discovery of Placer Gold in the Pacific Province—Large Prospect From the Washing of a Pan of Moss—Later the Discovery of the Richest Bar Ever Discovered on the Fraser River.

At the recent mining convention in British Columbia Mr. James Moore, the pioneer miner of B. C. and a delegate from the Cariboo, told the story of the discovery of gold in the country. He said, in part: When I first entered the Fraser River, with a few associates, all we found in this Province were three Hudson's Bay trading posts and a number of prospectors. That was the whole population of the part called at that time New Caledonia. I shall speak of this Province in future as British Columbia, as the Province was a Crown colony after we discovered placer mines on the Fraser River. In ascending the river we camped one evening on a bar to cook lunch, when one of my associates noticed particles of gold in the moss which was growing on the rocks on the bar.

He washed a pan of this moss and got a large prospect. After our gastronomic needs were satisfied, we all went prospecting and discovered a rich bar; in fact, sir, the richest bar ever discovered in the Fraser River or its tributaries. We named the bar in honor of my associate, who washed the first pan of moss, "Hill's Bar."

I wish it distinctly understood that we do not claim to be the first discoverers of gold—as gold was discovered the year before in small quantities by Indians on the Thompson River—but when we located this mine we laid the foundation-stone of mining in British Columbia. I may go a little further and say that we laid the foundation-stone of British Columbia, and I am proud to have the honor of stating upon the floor of this convention that I helped to lay that foundation-stone. I am the only one left of the party that discovered those first placer mines on "Hill's Bar," as my associates have crossed the "great divide," and trust they have struck it rich, and I hope they have a place for me when I join them.

When I was in Victoria last winter I met a gentleman, a Mr. Ladd, who told me that he now owns Hill's Bar, in the Fraser River, near Yale, as a mining proposition. He estimates the amount of gold already recovered from that bar to be approximately two million dollars. But, sir, in those days, no matter how rich a camp we discovered, we could not remain long in one camp. We had to explore, and I am still of the same disposition, and will not remain long in one camp to-day, but will proceed to the interior.

But, sir, before I do so, I would like to say that after we discovered mines and the great rush to the Fraser River commenced the river was then at high water, and as yet we had not the steamboat navigation, it was also for small boats during its high stage until such time as the river fell to low water. You must remember in those days there were no railroads, no highways, no pack trails. We had only an Indian trail along the great canyon of the Fraser, and the large chasms were spanned by poles tied with twisted willows, from which we could look down several hundred feet to the mighty Fraser rushing below.

We had to cross these bridges with our packs on or turn back; but, I assure you, sir, that we did not look what those words meant. Our motto was, "Upwards and onwards." In the fall and early spring, when the river was at its lowest stage, we were enabled to take up boats laden with provisions from Yale to Letton through the canyon of the Fraser. When we got to Letton some of the party continued up the river in the boats and discovered other large bars. Others of our party, myself included, got the horses and started inland and discovered the Horseshoe country and located what was then known as the celebrated "Blue Lead Claim." I paid the Horseshoe a visit 40 years after our discovery in 1859, and paid a visit to the old discovery claim, and found the company was still working that claim. The foreman of the company showed me a pan of gravel he recovered a few days before but not yet washed. It looked to me to be almost as much in gold as gravel in the pan. I could not help noticing the contrast between the present mode of working, which is by hydraulic elevators, the camp being now lit up with electricity, and our crude mode of working 40 years before with rockers and our camp lit up by camp fires. But, our camp lit up by camp fires. But, our camp lit up by camp fires.

At last there is hope for the army of young, old and middle-aged men who either through early indiscretions, later abuse of power, or some other cause are now seeking the happy life of the young men. It is a relief to know that there is a remedy for all these troubles, and that it is a simple one. It is a relief to know that there is a remedy for all these troubles, and that it is a simple one.

Turn Time Backward. Be Young Again.
