MONTREAL MARKETS. A Racy Review For Merchants, Traders And Farmers.

Special to the Whig. Montreal, Jan. 13.—During the past week there has been a considerable quantity of poultry of one kind or another disposed of to the local trade. Yet on all hands one may see large stocks of turkeys still in stock, which were purchased for the holiday trade and never disposed of. These hold the market down. The situation, however, is not so bad as it was a week ago, and it can only be a matter of a few weeks until stocks will have again become fairly light. Meanwhile dealers quote 12c. to 14c. for good stock and 15c. to 15 1/2c. for choice. Some claim that there is very little of anything save finest stock left in wholesalers' hands, but a sale of quite a lot of poor stuff at about 12c., and offer to sell more at the same price, shows that there is still some poor stuff to be had. It would not be surprising to see the market a little higher, again, as the general view is that stocks are very light in the country, holders having held back till Christmas and then shipped in heavily, and that once the glut here is cleaned up there will be little enough in the country to supply the regular demand. It is significant that in making enquiry of two large handlers of poultry, each declared that he had not a goose or a duck in stock and that he had not had any for some days. It is quite certain that

both geese and ducks are very scarce and hard to get, and those holding this kind of poultry in the country might do well to ship them in some time during the winter. There are now high and hardy likely to winter, while on the other hand there is room for a decline. Choice geese would sell at 12c. without difficulty, and ducks at the same or a little more. Enquiry for both is great, but it would seem that rather than pay more than the above figures, customers would go without them. The movement in chickens and feet is fairly large, much larger than in the lines of poultry. This is mainly because supplies are larger. Choice chickens are worth a good price, the large, fresh killed ones being good, and may also be had at 10c. to 10 1/2c., or quality not as fine, 9c. or 10c., but as low as 7c. and as high as 9c., according to quality. The weather is pretty favourable for trade. Potatoes—Recent storms and cold weather, as well as the holiday festivities, probably have caused a good deal of back deliveries. In fact, one large dealer states that he has not any receipts for a few weeks past. Some stock on hand, on track here this week, however, and a considerable number of dealers were after it. The market seemed increased strength. One dealer claimed to be buying at 60c. to 62c., the same as recently. But there are reasons to suppose that 65c. was paid and that would be difficult to secure really choice stock at anything less than that figure. The prices mentioned are for one and a half bushels, on track, in a jobbing way, from store, the same stock sells at 75c. If the experience of everyone who has purchased fresh potatoes last fall is the same as that of a merchant heard of to-day, only about half the stock taken in at that time has been disposed of again. An attempt is being made to obtain 65c. per bag for it, but it would probably be paid with at even less without much regret. Probably 60c. would secure much of it. Onions and turnips—This morning brought a stronger feeling into the market for onions. Stock has been very scarce for some time past and demand is active. This morning there were some Canadian reds offered and dealers bid them up to 3c. per lb., in some cases, the range of the market being from 2 1/2c. to 3c. according to quantity, as against 2c. a week ago. Turnips were steady and a fair trade was passing. For finest stock 81c. per ton is still being paid, eighty pound bags being 50c.

thought they could see an opening in that direction, but quite a few dairy butters have been taken of this market, at about 14c. per pound, it is said for New York for process purposes. It will probably be tinned and shipped south. Some creamery was also taken, and the price paid being some- where about 21c. for a shade less. It is considered that the butter market being 6c. per pound in New York than here in order to allow for duty and other charges. Choice creamery, whether fresh made or October made, cannot be had under 21c. per pound, though fine may be had at 21c., and good at 20c. Dairy butter ranges from 17c. to 18c., and 19c., according to quality and quantity. Receipts have been extremely light for a week past, showing that the make is falling off, or that stocks are accumulating in the country. Certainly they are not at all equal to consumption, and consequently stocks here will be decreasing rapidly. Chase—Undoubtedly, exporters have been offered 11c. here during the week. Whether the offer was accepted, or not for a limited quantity, it would appear certain that it was also refused. The view taken seems to be that those who have on a few thousand boxes of cheese are holding out firmly as they think they have good chances of making more. Large hold-

ers are also demanding firm prices. But these are not receiving bids for large quantities. If they were, the chances are that they would dispose of their stock, in considerable lots. The large holders are in some ways in the worst position, as when the smaller holders see them commencing to let their stocks go they will follow suit, and as they have such small quantities, they can get out without breaking the market on themselves, and they will tend to make matters worse for the large holder. Receipts have ceased entirely, save for an occasional half dozen lot, or so, and the general view is that stocks are on the light side and that English importers will have to come up to the scratch, sooner or later. Eggs—The market is very uninteresting, at present, demand being light and receipts being practically nil. Stocks are regarded as sufficient to carry the trade through till the hens begin laying and consequently prices continue steady. The market being featureless, selections from current arrivals sell at 25c. per doz., in small lots, No. 2 selling at 17c. to 18c. 50c. and straight 18c. to 20c. Montreal limited at 19c. to 20c., and western limited a cent less. Hay—The market is reported dull and unchanging. English hay is being sold to the only bright spot in the situation, at the present time, the United States being unremunerative, Scotland being the same and the maritime provinces being for the moment almost out of the question. Exportable freight rates having been cancelled. No. 1 timothy, 89 to 89.50; No. 2, 87 to 87.50; No. 3, 85 to 85.50; mixed, 87 to 87.50. Milfed—Stocks are very light and the demand continues good from all quarters of the domestic market, though there is no export demand. Manitoba hay, in bags, sells at 81c. per ton, shorts at 82c.; Ontario hay, in bulk, 81 to 81.5c.; shorts, 81 to 82c. Grain—Broomhall's reports of European crops are pretty satisfactory, crops of the United Kingdom being vigorous, France and Germany having a moderate covering of snow, Hungary and Roumania unharmed through snow covering in this, Russia and Bulgaria good falls of snow and India conditions favourable. The local market for oats is again firm, though sales are not being made freely. It is still stated that stocks are hard to secure in the west and that there is none too much stock here under the circumstances. Farmers are now making deliveries here in a fairly liberal manner and this is one of the bearish influences. Quotations are 30c.

ers are also demanding firm prices. But these are not receiving bids for large quantities. If they were, the chances are that they would dispose of their stock, in considerable lots. The large holders are in some ways in the worst position, as when the smaller holders see them commencing to let their stocks go they will follow suit, and as they have such small quantities, they can get out without breaking the market on themselves, and they will tend to make matters worse for the large holder. Butter—During the past week advice from England, by cable, have been very firm in tone. The case was 11c. per pound up, one day, and although this was on Danish butter, and shippers on this side could not be affected as there was no Canadian butter in the English market, the talking of the general effect of an advance in the English market can never be anything but strengthening on this market. At the same time there were heard further rumors of price changes, by United States dealers, of local creamery and dairy. The result, as may be surmised, was that the local market advanced. At the present time there is little or no export to England, though some dealers

THE WONDERS OF ELECTRICITY Now Used for Purifying Flour

The New Process Makes Bread and Pastry Lighter, Sweeter, Whiter and More Wholesome—Womer of Canada Delighted. What is Electricity? nobody knows, not even Edison. What does it do? everybody knows. It runs street cars—telephones—automobiles. It furnishes light—heat—power—detects and detests disease—enables the doctor to see clear through a man. Performs all sorts of wonders—not least of which is acting as Nature's Great Purifier. Because when the world's dust, dirt and disease germs have been taken up by the air, and hang over the earth in clouds—electricity shoots lightning through the clouds—flash!—boom!—rumble!—down comes the rain, the atmosphere is purified—and we exclaim—"how nice and fresh the air is since that thunder storm!" Electricity in the Flour Mill. Something like that but minus the thunder and lightning—silently—swiftly—surely electricity performs its miracle in the "Royal Household" mill—the only mill in the Dominion of Canada where electricity is used for purifying purposes. When the grinders—separators—alters—air-filters, have ground and re-ground—purified and re-purified the flour again and again, all down through the seven floors of the big "Royal Household" mill until it is nearer perfection than flour ever was before—electricity says—"I can do more than that" and sending its mysterious charge of Electrified Air through the flour, removes the last, least trace of impurity—gives it new life and greater energy—makes a flour that is pure enough, sweet enough, white enough, to be worthy the name and fame of "Royal Household"—the flour that is more delicious—more healthful—more satisfying than any other flour in the world. —the flour that makes the bread and pastry used on the tables of Royalty—the flour that thousands of Canadian women are now using to make better bread—better pastry than they ever made before. Every day hundreds of testimonials are coming to the Ogilvie Flour Mills Co. Ltd., Montreal, from women who are using Royal Household Flour, according to the "Royal Household" recipe and say they are delighted with it. The recipe will be sent free for the asking —ask for them—"FLOURFAX."
