A SCIENTIST IS DEAD

PROF. ALEXANDER M. BELL'S LIFE ENDED.

Succumbed to An Attack of Pneumonia—Had Not Been in Good Health for a Year—His Contributions to Science.

Washington, Star, Aug. 17.—Alexander Melville Bell, educator, writer and scientist, died this morning at the home of his son, Alexander Graham Bell, 1331 Connecticut avenue north-west. Dr. Bell was meeting slowly from an operation, made necessary by an attack of diabetes three weeks ago, and performed last Tuesday, when symptoms of pneumonia made their appearance Saturday, rapidly developed and caused final dissolution this morning. The end came peacefully while the sick man was surrounded by the members of his immediate family. Dr. Bell was eighty-six years of age.

Dr. Bell's health was considered excellent up to about a year ago, when he suffered severely from an attack of diabetes. The effects of this attack wore off after careful medical treatment, however, and the patient appeared to regain his usual state of health. He is accustomed to spending the early months of the summer at his cottage at Colonial Beach, Va., and during his sojourn there this summer, about three weeks ago, he again fell a victim to diabetes. He was treated by Dr. Nind, of Colonial Beach and Dr. J. B. Briggs, of this city, and appeared to improve. The treatment did not appear to have the effect desired, however, and the patient was brought to this city about a week ago and conveyed to the residence of his son, Dr. Alexander Graham Bell, Dr. Thomas F. Fitcher, Johns Hopkins University, the distinguished specialist, who attended the late Senator Hanna in his last illness and was associated with Dr. Ober at Johns Hopkins, was called to attend the sick man, in consultation with Dr. Briggs and Dr. James Mitchell of this city. As a result of the observation and conference of the medical attention was reached to perform an operation on Tuesday last to remove a growth at the end of the spine, by means of which it was hoped to relieve the patient. The operation was highly successful, and the patient rallied quickly from the shock and straightway began to gain strength. All the trouble which had formerly weakened him and retarded recovery seemed to be removed, but he was yet in an extremely exhausted condition.

On Saturday morning the attendants observed that the left lung of the patient appeared to be affected, and the affection rapidly developed into pneumonia symptoms. Every effort was made to combat the new complication, but the patient was too weak from his long illness to withstand the disease, and despite the efforts of his attendants he grew weaker until this morning, when it became apparent that death would triumph. The sick man's wife, his son, Dr. Alex. Graham Bell and his daughter, Mrs. G. Hubbard, William Ker, a nephew, David Fairchild, Miss Ada Wurtman, John Hitz and Mrs. Briggs and Claude McDermott were at the bedside when the end came. Dr. Bell was free from pain and expired peacefully as his family gathered about him.

JUST ARRIVED FOR OUR MID-SUMMER SALE

A large assortment of Extension Tables, golden oak finish, same as our \$8.50. Sale price, \$6.50.

Also Velour Cushions Morris Chairs, only \$6.50.

HARVESTING BUCKWHEAT.

Great Care Must Be Exercised to Get Best Results.

The harvesting of buckwheat requires some nicety of touch, for, like oats—only more so—it does not ripen its seed uniformly. The succession of blooming and ripening is so long that first-formed seeds may be ready to shed while those following on are still green.

The only plan, however, is to examine the crop carefully from time to time, and reap when there is the greatest attainable quantity of ripe and bold seeds. And, with crops of this peculiar ripening it should always be borne in mind that the earliest seeds are far the best, so that it is better to lose two of the latter than one of the earlier. The crop may be reaped in a number of ways, but the machinery or otherwise. The fashion used to be to pull it, but that plan would not suit us nowadays. It was held by our forefathers that pulling did not shake out so much seed as reaping. But the cradle scythe always was a popular plan, and if you have only a little to cut, there is no better plan for you to pursue. If, however, weather comes on hot it is better to mow or scythe. The dew and damp of morn or eve then saves shedding of the seed to a considerable extent. If buckwheat is reaped before the last stage of ripening, as most of our other crops are, there is too great a loss in the secondary and later ripening grains.

The crop may either be sheared and shocked like wheat, or be left in cocks or bunches like pens. In the former plan no moving is needed till carting in takes place, but in the latter the wads may require turning a time or two—particularly if rain falls. But throughout the process the less moving the better, so long as the straw is got quite dry, as the more moving the more shedding. There is liable to be loss in the stack, too; in fact, it is said to be if leading is conducted before the crop is ready. Patience is a virtue here, as in hay-making. Some farmers put a layer or two of brush or straw in the stack to give air and save fermentation. As with other crops that do not ripen uniformly or regularly, buckwheat needs extra care in carting and stacking, as well as in the reaping.

Glasgow makes £500 a year profit out of waste paper collected in the streets.

in the system of visible speech, of which he was the inventor. In 1855 his father died, and Dr. Bell removed to London, where he endeavored, by lectures, to give the widest publicity to his work and theories.

Removed To States.

In 1858 he came to the United States and delivered a course of lectures before the Lowell Institute, of Boston.

He delivered a course of twelve lectures before the Lowell Institute in 1859 and another course in 1870. During this time he became convinced that America offered him a better field than the old country, and before making his last trip to the United States resigned his position as professor of elocution in the University of London, and after his lecture course in Boston; he established himself at Tutelo Heights, near Frankfort, in the province of Ontario, Canada. He was made professor of elocution at Queen's College, Kingston, and delivered lectures in Montreal, Toronto, London and other Canadian cities. Dr. Bell was associated with his son, Alexander Graham Bell, in the establishment of the school for instruction in vocal physiology, and was a member of the board of instruction.

In 1851 Dr. Bell removed his residence to this city, and has lived here ever since. He has been engaged in literary work almost all the time he has lived here, and has written many books and pamphlets, treating the subjects of elocution, vocal physiology, phonetics and defects in speech. His literary work covers almost the entire active period of his life from 1845 to 1898, when his last book was published.

His work in vocal physiology and phonetics soon placed him in the lead of all his contemporaries, and he was frequently sought and consulted by eminent men of his profession for advice and counsel. He was elected fellow of the American Association for the Advancement of Science in 1883, and was an active member of numerous scientific and educational organizations of this country. He was also a fellow of the Educational Institute in Scotland and of the Royal Scottish Society of Arts. He was a member of the National Geographic Society, of this city, and of the Cosmos Club.

Among the deaf mutes in the district, Dr. Bell is known for his establishment of the Volta bureau, which was established by him for the increase and diffusion of knowledge relating to the deaf. This bureau has been presented with all the copyrights and plates of his publications on subjects with which it is concerned. Dr. Bell established in 1902 the Bell School of Speech in New York.

Founded The Bell Home.

Outside of scientific circles, Dr. Bell is best known for his many charities. He was a member of the board of managers of the Industrial Home School, and eleven years ago founded the Home for Sick and Dependent Children at Colonial Beach, Va., where children are given a summer home with all the benefits of salt water and fresh air. Dr. Bell's charities went far beyond those institutions or societies with which he had official connection, however. He was disposed to freely aid all who were needy and suffering, and many touching and tender stories of his services could possibly be told if it were possible to obtain even a faint knowledge of the manner in which he distributed all his aims.

Dr. Bell was married twice. In 1844 he married Miss Eliza Grace Symonds in Edinburgh. The couple had one child, Alexander Graham Bell. Mrs. Bell died many years ago. In 1898 Dr. Bell was married the second time to Mrs. Harriett Guesse Shibley, of New York. The license issued for this marriage was the first to be issued in New York under the charter of Great New York.

The second Mrs. Bell is still living, and with Dr. Alexander Graham Bell, his son, Mrs. Gilbert H. Grosvenor, and Mrs. David Fairchild, grandchildren, the children of Mrs. Grosvenor, compose the Bell family.

Charles J. Bell is a nephew of the deceased scientist.

Dr. Bell had a handsome home in this city at 1325 35th street, which was the headquarters for scientific men throughout the country. His summer home at Colonial Beach was one of the handsomest houses in Westernland county, Virginia. Dr. Bell was in the habit of spending half of his summer at Colonial Beach and half with his son at the latter's summer place at Vashope, Nova Scotia. Dr. Bell was preparing to leave his Colonial Beach home for Nova Scotia when he became ill, three weeks ago.

Lots of Time.

Toronto Star.

A long-haired man walking along the street met a little boy, who asked him the time.

"Ten minutes to nine," said the man.

"Well," said the boy, "at nine o'clock get your hair cut," and he took to his heels and ran, the aggrieved one after him.

"Turning the corner, the man ran into a policeman, nearly knocking him over.

"What's up?" said the policeman.

The man, very much out of breath, said: "You see that young urchin running along there? He asked me at nine o'clock to get my hair cut; ten minutes to nine," and he said: "At nine o'clock get your hair cut."

"Well," said the policeman, "what are you running for? You have eight minutes yet."

"Ozone," Its Best Form.

The prompt and permanent removal of any internal germs is most surely effected by the use of "Solution of Ozone" if it's the "coupon kind." It means the liquid oxygen in its most concentrated form and that in addition is given free with either the fifty cent or the one dollar size of the Solution a coupon good for a twenty-five cent package of "Cely King."

The splendid laxative is needed to obtain the best results in the use of the stringent "Ozone" without lessening its curative properties. The Public Drug Company, Bridgeburg, Ont. contains exclusively the manufacture of both "Solution of Ozone" and "Cely King."

How to Avoid Catching Cold.

Allow yourself to "run down" and catch cold from the first germ that comes your way. Wade's Iron Tonic Pills make you cold proof by giving you rich healthy blood, the kind that kills all disease germs. In boxes \$5c. at Wade's Drug Store. Money back if not satisfactory.

Lifelong Soap—disinfectant—is strongly recommended by the medical profession as a safeguard against infectious diseases.

Hong Kong harbor is one of the finest in the world, having a water area of some ten square miles.

'Red Feather' Tea

Quoth Uncle Sam, "I hate to see Them Canucks get the draw on me. This here Red Feather Tea's immense—Makes U.S. feel like thirty cents. I'll hike to Ottawa," says he, "And coax for reciprocity."

ONE PRICE—50 CENTS

All Household Roads Lead to Kitchen Work

NINE-TENTHS of kitchen labor and worry is caused by ill-working cook stoves and ranges; by ranges that draw poorly; that have such complicated drafts that only a skilled mechanic can manage them; whose grates are so constructed that it is a strong man's work to shake them down; ranges which work well when the wind is in a certain direction, but act like a fiend at other times; ranges whose work is so unreliable that the housekeeper is in a constant nerve-racking worry lest the meals be late or the baking spoiled.

The Pandora range is built to make work easy, a child can shake it down; its drafts are so simple that one learns them in a minute; its heat is kept in the range so effectively that you can do a big baking and hardly know there is a fire in it two feet away; it keeps the kitchen cool; it saves you worry; it saves you time and money; it saves you backaches and headaches, because it is so easy to manage and so reliable.

The Pandora makes kitchen work easy.

BITTING A HORSE.

Bits Should Be Changed According to Temper of Horse.

The secret of biting is merely to equip the horse so that he performs the task required of him in the manner we direct, properly poised, and with the minimum of resistance. If this result is obtained, any arrangement from a halter or cavesson up is proper and in good form.

The mistake we all make is not in varying the bit according to the need, or its severity according to requirement. We drive or ride a horse always in the same bit, and kind of bit, same link of the chain and same place in the mouth, regardless of whether he is fresh and lively or dead tired and going up a long journey. If he gets "behind the bit," either in harness or saddle, we force him to it with whip and voice, yet there are few horses which will not be lighter and more pleasant if favored as the distance augments, just as there are none who may not be permanently more lightly bitten every little while if only we take the trouble to study them.

A constant changing of the bits has another and a moral effect, it distracts the animal's attention from his purpose. If you give him a new arrangement, as shifting of bits, to puzzle over, he forgets his determination to pull, any way for a few moments. In his wonder he may change his balance, and suddenly discover for himself that he can work easier in a manner he had never thought of, and this impression is doubly lasting, because he is tricked into thinking that he originated the idea. Forth with your battle is two-thirds won. If he gets "behind the bit," either in harness or saddle, we force him to it with whip and voice, yet there are few horses which will not be lighter and more pleasant if favored as the distance augments, just as there are none who may not be permanently more lightly bitten every little while if only we take the trouble to study them.

DRS. KENNEDY & KERGAN, Cor. Michigan Ave. Shelby St., Detroit, Mich.

DRS. KENNEDY & KERGAN

Specialists in the Treatment of Nervous, Blood, Private and Sexual Diseases of Men and Women. 25 Years in Detroit.

No Names used without Written Consent. Cures Guaranteed.

Thousands of young and middle-aged men are annually swept to a premature grave through early abuse or later excesses. Charles Anderson was one of the victims, but was rescued in time. He says: "I married an evil habit. A change soon came over me. I could feel it; my friends noticed it. I became nervous, despondent, gloomy, had no ambition, easily tired, evil forebodings, poor circulation, pimples on face, back weak, dreams and drains at night, tired and weak mornings, burning sensation. To make matters worse, I became nervous and contracted a blood disease. I tried many doctors and medical firms—all failed till Dr. Kennedy & Kergan took my case. In one week I felt better, and in a few weeks was entirely cured. They are the only reliable and honest Specialists in the country."

READER—We guarantee to cure you or no pay. You run no risk. We have a reputation and business at stake. Beware of cheap imitations. We will pay \$1,000 for any case we take that our NEW METHOD TREATMENT will not cure.
