NEWS OF NEIGHBORS

WHAT WHIG CORRESPONDENTS TELL US.

The Tidings From Various Points In Eastern Ontario — What People Are Doing And What They Are Saying.

Glendower Jottings.
Glendower, Jan. 11.—Farmers are busily engaged cutting their winter's supply of wood. Christie Leeman is home from Ontario. Mrs. Manley Timmerman had the misfortune to fall on the ice and break her arm. Mrs. D. McGowan is on the sick list. T. Babcock has the contract of furnishing the school house with wood. Samuel Walker intends going to Cobalt shortly.

Salem Happenings.
Salem, Jan. 11.—School has reopened, with Miss Nellie Scanlan as teacher. James Sanders was re-appointed as school trustee for the next three years. The annual meeting of the patrons of Salem cheese factory was held Wednesday. P. B. Ewing and wife returned from Brockville on Monday evening. Miss Ethel Taggart returned to Athens on Wednesday last and has resumed her duties as teacher in the Athens school. Justus Jones, who was hurt quite badly last week by a fall, is improving.

Bath Brevities.
Bath, Jan. 11.—The bay froze over on Monday night last; some are crossing over on the ice already in our village. Mrs. W. A. Gay, McDonald's Corners, is visiting D. T. Rowse's. Miss N. S. Aylesworth, last Sunday evening while returning from church ill, severely spraining her wrist. The weather in this locality has been quite severe the past few days, the thermometer reaching six degrees below zero, but it has since moderated very much. A little more snow would be welcome by everyone. Mrs. C. Mills has returned home from her visit to her son, Frank, in Napanee.

Brief Notes From Bongard's.
Bongard's, Jan. 11.—Miss Etta Baird, Newwood, has been engaged as teacher here for this year. Mr. and Mrs. D. T. McCarnock were guests of Mr. and Mrs. W. J. McCarnock, Greenbush, on Tuesday. Mrs. J. D. Bongard entertained a number of her friends recently. Miss Gertrude Williams is visiting in Picton and Wellington. J. Sheppard and wife spent Sunday last at Wauspore. Mr. and Mrs. R. Harrison entertained on Tuesday and Friday evenings respectively. Mr. and Mrs. S. A. Toby and Mr. and Mrs. D. T. McCarnock were guests of Mrs. H. Hobson, Picton, recently. William Stanton, Calgary, has returned home for the winter.

Trouble For Man.
No longer satisfied with a dreary black coat, men, at last, according to the London "Tailor and Cutter," are beginning to adopt clothing of a bright color and vivid patterns, owing to the fashion set by King Edward. During his majesty's recent stay at Sandringham, he adopted a very showy style of dress, consisting of a sericet, Tam O'Shanter, a drab Norfolk jacket and "knickers," and brightly colored hose. The efforts to relieve the sombreness of men's clothing have been especially directed toward the production of stylish fancy vests, and particular attention has been paid to the buttons of these garments, the tailor and jeweler having tried to outdo one another in the beauty of their productions.

TORPID LIVER CAUSE OF FEVERS

The Surest Way to Prevent Disease is to Keep the Liver Active With

Dr. Chase's Kidney-Liver Pills.

Too frequently an external cause for fever is looked for, when the real source of trouble is from within the body itself.

To begin with, the liver becomes torpid, sluggish and inactive, and poisonous bile is left in the blood to corrupt the whole system. The result is the overworking of the kidneys, and the clogging up of the organs of excretion.

Food which should be digested is left to ferment and decay in the intestines, and inflammations and fevers are set up.

In such a condition the body is a regular hot bed of disease, and is most susceptible to any ailment of an infectious or contagious nature.

The best insurance against disease is the use of Dr. Chase's Kidney-Liver Pills to keep the liver active. This great medicine has a direct and specific action on the liver, and is wonderfully prompt and effective in awakening and invigorating this important filtering organ.

A healthy liver means pure blood, good digestion and the proper working of the bowels. A healthy liver ensures the onward passage of the food through the intestines and excretory organs, and so removes all chance of poisonous waste matter remaining in the body to produce pain, suffering and disease.

James Baird, postmaster, Concession, Ont., writes:

It gives me and my wife much pleasure to recommend Dr. Chase's Kidney-Liver Pills as a family medicine of superior value.

We use them in preference to all other pills in our family and I might here state that they cured me when suffering from biliousness and also cured my wife of sick headache from which she suffered severely.

Dr. Chase's Kidney-Liver Pills, one pill a dose, 25c. a box, at all dealers, or Edmondson, Bates & Co., Toronto.

GREEN FEED FOR HENS.

Don't Feed a One Grain Ration to Them.

Hens need the elements and the bulk that green food offers, and this must be given them as regularly as it is supplied to cattle. The laying of an egg is more of a strain on the vitality of a hen than is the giving of milk to a cow. Egg laying is a reproductive function; in every egg is the minute germ of life. The cow may give milk on a very insufficient diet, but the hen will not lay unless she is given, or, by having the range of the barns, granaries, and hay stacks, can find the materials for the egg.

The food of the laying hen should contain about the same elements, as are required by a dairy cow in full milk. Many farmers try to winter their hens on corn. This is poor policy viewed from the standpoint of either present or future profit. The actual cost of a strictly grain ration is higher than that of the ration which includes animal and green food. Aside from the fact that we get no eggs on a one-grain ration the result of such feeding through the winter is apparent in the spring when mysterious deaths occur in the flock and eggs are few and infertile. The comb of a hen that has been wintered on one grain only becomes abnormally red, towards spring the fowls are fat and baggy behind, the feathers about the vent are stained, and this is followed by a greenish yellow diarrhoea. In the second stage the diarrhoea increases, the bird may die immediately or waste away, getting so thin that before death the breastbone is sharp. The result of feeding the one grain being an excess of starch food, an overworked liver, which becomes abnormally large and soft, and then death. If a variety of grain is fed the fowls may show no evil effects, but they will not lay as they would if fed the cheaper ration which includes green food and animal food.

FASHION'S FORM.

Short Jacket on Military Lines.

The very newest models in tailored suits, both of the severely-tailored and semi-dressy order, show the coat of the Eton school, a military braid trim, the edges of the coat, and a double row runs either side of the front, closing half way between the neck and sleeve seam. The collar is a straight military band, and a dainty, drossy touch is added by the narrow pale blue vest stitched in black, which peeps from out the braided edges of the fronts. At the neck is a small pointed strap of the broadcloth, this with the tiny black velvet buttons making the necessary fastening.

Pure, Clean Seeds.

If the different kinds of grain intended for seed are run through a good fanning and grading mill, one that is adapted to the purpose, the light chaff portions that are of no value can be separated, as well as the seeds of weeds, leaving that to be sown of a uniform and superior quality.

Less of such weed will be required per acre and the crop will be more uniform in growth and yield, as well as heavier in weight, may be improved by careful selection and care of the seed from year to year and so can potatoes.

Often the yield and quality of the grains and potatoes can be improved by the same variety from a different location and soil. Try this method and see.

Much care should be taken in obtaining the various kinds of grass and clover seeds, as these often contain injurious seeds of weeds that thus become widely scattered over the country. Perhaps this cannot always be avoided, but if obtained from reliable dealers, and of those grades, not the cheapest and poorest, there should be some degree of safety.

The same may be said of the seeds for the garden. Buy from those dealers that have a reputation at stake.

Canada's Range Season.

Chicago Live Stock World: Western Canada sent about 50,000 range cattle to the ice-water this year, the majority seeking British markets.

The fact that there was a conspicuous tail-end in the run is commented on by Canadian authorities. Canada has hugged the delusion that it could make beef fat enough for export on its western ranges, a feat the American grazer has been unable to accomplish, and the range south of the international boundary is as good as that lying to the north of it.

Great Britain does not want the kind of cattle Alberta sends direct from its pastures. They ought to be finished either in Ontario or the corn belt, and under existing conditions the latter method is impossible.

THE CANADIAN WEST.

Success Made of Growing of Winter Wheat.

The success which attends the growing of winter wheat in the Canadian North-West is one of the most surprising of the many surprises that have attended during recent years, regarding the adaptation of plants, says Prof. Thomas Shaw, in the American Agriculturist. Prof. Shaw refers to the fact that in 1903 only a few farmers in the district between Lethbridge and Edmonton were growing winter wheat. In 1904 the area devoted to the crop embraced 8,296 acres, over the whole of Alberta, while in the central part the yield was 28.67 bushels on an average 18.33 bushels. The winter wheat crop of Alberta in 1905 is estimated at 2,000,000 bushels.

Prof. Shaw says: Any country that will grow sure crops of winter wheat will in time grow good crops of clover and even alfalfa. Any country that will grow wheat in good form, and is, therefore, judged from the standpoint of production, a good country to live in.

It is my conviction that winter wheat will come throughout the greater portion of tillable Alberta, over large portions of Central and Northern Saskatchewan, and in certain of the northern areas of Manitoba. If the conclusion is correct it will open up an empire for the growth of winter wheat, as the country referred to in Saskatchewan and Manitoba covers an area of several hundred miles from east to west.

Considerable Of A Sale.

The manager of the publication department of the London Times says: "During the past eight years, the Times has sold, in almost every country of the world, sets of 'Encyclopaedia Britannica' in the instalment plan, giving credit for periods of two, three, and four years. Ninety-five per cent. of the 'Encyclopaedia' sold in Japan were sold to Japanese. The Japanese bought five times as many 'Encyclopaedias' as were sold in France and Germany combined, fifty times as many as in Russia, more than in any other country except India, Austria and the United States. When young men, who have bought the 'Encyclopaedia,' abandoned their employment to go to the front, their families promptly paid the instalments due under circumstances of the utmost difficulty."

SOME MEN'S WEALTH

And the Way it Was Acquired.

C. M. Keys, writing in January World's work of how some men get rich, says:

"There is a young man who built a little glass factory ten years ago at a cost of about \$5,000, and sold it out three years ago to the Glass Trust for half a million dollars in stocks and bonds. There is a man who sold a recipe to United States Steel Corporation for \$200,000. Another thirty man has made ten fortunes floating new industries in the Pittsburgh belt, and lost them backing the stocks in the local market. One young man bought up three acres of land in the Connelville region a few years ago at a thousand dollars an acre, and is taking \$10,000 a year out of the coke ovens that he built on the same three acres.

"William Mackenzie, of Canada, is building a railway to rival the Canadian Pacific across the great prairies. He has also built tramways in Manchester, England, and in Havana, Cuba. He owns the trolley system of Toronto. He bought a little empire outside of Rio de Janeiro, Brazil, and out of it he made an eleven million dollar company, whose stocks pay six per cent. dividends. It is a transportation trust for the great city in South America. Yet a few years ago Mr. Mackenzie was only a fairly prosperous farmer somewhere in the wilds of Central Ontario."

Township of Kingston Council.

Jan. 8.—John W. Martin (revere), John Aylesworth, William Lawson, Nelson McAdoo and John Purdy, councillors qualified. The local option by-law passed by the council of 1905, and ratified by the ratifiers had its third reading, and was finally passed. Yeas, in favor of by-law, John W. Martin, William Lawson and John Aylesworth. Nays, Nelson McAdoo and John Purdy. Councillors Lawson and McAdoo to examine a washout, complained of by James Hyland. On motion, Aylesworth-McAdoo pathmasters, when appointed, to sign the declaration of office and be sworn in. John Smith voted 87.75 for six weeks' support of Mrs. Hurd, and for trouble in connection with the burial. On motion, Aylesworth-Lawson, H. J. Day appointed assessor at \$60. On motion, Lawson-Purdy, James Hyland voted \$4 for damage to his fences, a road having been made across his lands last winter.

BETRAYED BY A FOWL.

Long Undiscovered Crime Unearthed.

A crime, which remained undiscovered for quite a long time, has been brought to the light in a most curious way. A couple of years ago a watchmaker's shop in Amsterdam was plundered by a gang of burglars and among the booty were some 400 watches, rings and other trinkets. After considerable search part of the plunder was discovered, and some of the burglars were arrested. Although the police were convinced as to the guilt of other men, no proof could be found against them, and the rest of the plunder also remained undisturbed.

The other day, however, a little boy was arrested in a pawnshop, where he tried to pledge a ring, of which he gave an account that was deemed unsatisfactory. Going into the matter, the police soon found an amount of finery in the room, where the boy's parents lived. The watches, rings, etc., were stolen two years ago. The story referred by the inhabitants is the following: In the same room formerly lived the people who attracted the suspicion of the police in connection with the burglary. During their provisional arrest, the rent being over due, this new family moved in. Being poor people, they kept some fowl on the premises, and one of the birds was in the habit of scratching the plaster on the wall. By doing so the wall became very thin, and at last a hole was made in it. In this hollow space the poor people found the missing trinkets, some of which they sold. As a result of this discovery some further arrests have been made, so that the burglars will be brought to book, and the remainder of their plunder restored to the rightful owners.

A-Hawkesbury Story.

Utah Herald: That down in Hawkesbury there was an old lady who used to get about 100 pounds of wood fire, from which tinner was made, each week, and take it home. She kept a boarding house, and it was known that she had been feeding the boarders codfish balls regularly. The mill men became curious and once asked her what she used it for. She told them how the supply of codfish in the grocery had run out, and she had got the fire, and the boarders had been having "codfish balls" just the same.
