Sunlight Soap is better than other soaps, but is best when used in the Sunlight way (follow directions).

Hard rubbing and boiling are things of the past in homes where Sunlight Soap is used as

Sunlight Soap will not injure even the daintiest fabric or the hands, and the clothes will be perfectly white, woolens soft and fluffy.

The reason for this is because Sunlight Soap is absolutely pure, contains no injurious chemicals indeed, nothing but the active, cleansing, dist-removing properties of seap that is nothing but

SINFUL HABITS IN YOUTH THE RESULT of Ignorance and folly in youth, overexertion of mind and body induced by lust and exposure are constantly wrecking the lives at an early age, at the blossom of manhood, while others are forced to drag out a weary, fruitless and melancholy existence. Others reach matrimony but find no solace or comfort there. The victime are found in all stations of life—the farm, the office, the workshop, the pulpit, the trades and the professions. Rervess Beblilty and Seminal Weakness are guaranteed cured by our New Mathed Treatment or No Pay. You run no risk 25 years in Detroit. Bank security.

CURED WHEN ALL ELSE FAILED. He names used without written sensent. "I am 33 years of age and married. When young I led a gay life. Early indiscretions and later excesses made trouble for me. I became weak and nervous. My kidneys became affected and I feared Bright's Disease. Married Life was unsatisfactory and my home unhappy. I tried everything—all falled till I took treatment from Drs. Kennedy & Kergau. Their New Method built me up mentally, physically and sexually. I feel and act wilful and responsible financially, so why patronize Quacks and Fakirs when you are becamed by reliable doctors."—W. A. Belton.

NOTHING SENSATIONAL, BUT LOTS OF GOOD WORK.

Mica, Iron Pyrites for the Making of Sulphuric Acid, Corundum, Sodalite and Copper Ore Among the Ore That Pay Well.

"The Eastern Ontario mining dis trict is at present producing profitably a greater variety of minerals than any other territory of equal area in the world, and Hastings county is its richest part.

"There is one little bit of land, less the Smith & Lacey mica mine, near Sydenham, which has produced more than any other equal area in Canada -Cobalt included. Its product has exceeded \$2,000,000, and it is still be ing operated successfully, as the prices of mica are high just now."

Such were the, startling statements made to your correspondent by a gentleman who is engaged in mining in the district, who has had a long and intimate practical acquaintance with the mining industry in this section, and whose scientific knowledge of the subject is beyond question. Such expressions from a less authoritative source would not have been deemed worthy of notice.

The same gentleman also stated that during the past winter there had been more men employed in the mines of North Hastings than ever before and that the industry was likely to show great development.

One of the most important develop ments will be the erection of a sme ter at the El Dorado copper mine This has been determined upon b the lessees, the Medina Gold con pany, after a thorough test of the ore. two cars of which assayed better than ten per cent., and a careful examina tion of the vein, on which sinking has been done to the depth of 160 feet. The vein was somewhat clusive a first, but its course was ascertained by drifting, and it now has a clearly defined width of over sixteen feet. The ficet of the installation of the smelt ing plant in this mine will be to ren der it possible to profitably work number of small copper deposits near by which have lain idle for lack o such facilities. The one will be reduced to slag, in which form it will be sent to the United States and there refined. The discovery of this deposit, under similar conditions to those which obtain in Colorado, namely, beneath hematite iron ore, leads to the belief that further important finds will

be made, as there are many hematite

deposits in that vicinity.

Another important branch of indus try in North Hastings is the mining o iron pyrites, which material is for-warded to Buffalo and there manufac tured into sulphuric acid of a quality much superior to that obtained from the volcanic sulphur of Stromboli, It aly, and elsewhere. A company who are operating at Capelton, Quebec, are mining extensively at Boggrt, in Hungerford township, and at Bannockburn, in the township of Madoc, and talk of creeting extensive works a Tweed. A mine near Queensboro' is also being worked. There ought to be money in this business, as it is stated that sulphuric acid, which is laid down in Belleville at \$42 per ton. ought not to cost more than \$25 per ton. It is reported that a German company with large capital and ample experience will establish works at o

near El Dorado this season. Some two or three of the gold mines are being worked, but not, so far a can be learned, on a large scale. The sodalite mine, near Bancroft promises great things. A car of the mineral was some months ago shipped to England, and netted \$30,000, Ma-

The corundum industry is booming. The Canada Corundum company are employing about 400 men, and the output of their mill is fourteen tons per day. The Burgess mine, in Carlow township, is also making a fine show ing. The Ashland Emery & Corundum company, who are the owners, have built a large mill, in which they will shortly place \$20,000 worth of new machinery from England. There are about forty men employed at present, and this force will be largely added to

Quarries of granite and marble of ine quality are being . opened near

The Hollondia lead mine has been steadily worked, with good results, and the tale mine at Moira Lake, will be operated when milder weather sets

An important discovery of silver in Belmont township, near Havelock, is eported, but particulars cannot be learned. The discovery is not unex peeted, as it has long been believed that silver existed in that vicinity. All in all, the mining industry in this district has never been more prosmany years looked more promising.

A gold mine on the farm of John Rhodes, in the fourth concession of Elzevir, is being operated by parties from Buffalo and is of great promise. The shaft is seventy feet deep and the vein, which is twenty feet wide, improves as they go down. An assay of the ore made at the provincial assay office in Belleville, shows the pleasing re- \$130.80 per ton.

A large shipment is being made from the Guadoc tale mine.

The Stanley smelting works of Bannockburn shipped a carload of lead to Toronto, last week. The product is pure and commands the best price going, which is now \$98 per ton. The great increase in the price of arsenie, which is now \$180 per ton. against half that amount a year ago, has caused the owners of the Deloro mine to commence preparations, it is reported for reopening their mine. Other owners of mispiekle deposits which are not being worked may be expect-

ed to take similar action. The success of the electric smelting experiments at Sault Ste. Marie will have a highly beneficial effect in rendering available the somewhat refrac dering available the somewhat refrac-tory iron ores of this region, many of which carry too high a percentage of sulphur for successful smelting by the ordinary process. Already the Ameri-
