"Oplfer per Orbem Dicor."

Municipal Enterprises. (Article V.)

In the last article the Whig dealt with the electrical changes in the power house. Now it is proposed to discuss briefly the suggested improvements in the steam plant, in the gas plant, and in the arc light system, This budget was submitted to Mr. Ross, the Montreal expert, and reviewed by him in his special report in April. He is a mechanical engineer and an authority on steam as well as electrical appliances. Four items were covered by Mr. Campbell's requisition, Colborne, Barrie, and Montreal streets, and Mr. Ross endorsed them all.

The suction pipe extension, far out into the harbor and guaranteeing a supply of clean water for general purposes, he regarded as necessary and as "contributing to the long life of

The water separators, for the Corliss engines, are referred to as "an assurance when forcing boilers that water will not be carried over and wreck the engines." Mr. Ross says he would not think of establishing engines of the size of those at the power house without receivers and separators. So that item is approved.

There is to be a change of piping i the boiler house, and the experts di fer to whether it should be copper galvanized iron, but copper is going it unless the committee or council order

Then there is the Triplex power lically that of the junior form in the foundations will round out count thus :

The electrical plant which will be displaced is valued at over \$6,000, and the new machinery to be installed at were crowded and could not accommo-\$16,150. The Whig reprints the figures date any more pupils, and such in their correct relationship here Portsmouth cause in Article IV. they were transposed and so misunderstood.

In addition there will be the electrical connections on the inside; the feed-PUESDAY, June 12th, at 7.30 o'clock, ers and mains on the outside, Edison system, at a cost of \$4,878.75; feeders, mains, and poles, for the alternating system, at a cost of \$6,011.90; new meters, transformers and services, at a cost of \$2,500; and reforms in the are light system at an outlay of \$3,

> attention because of the comment that Of course this is only an inference has been centred upon it. Originally- but is a very strong one. Years age in the by-law of 1904-it was intended | there was an outcry against overlapthat the whole system should be re- ping, at the people's expense, in our newed, and for this purpose, \$10,000 school system. It should not now be was suggested. The failure to submit revived, in view of the additions that by-law deferred action, and to ready incurred in school expenditure ment of the business which is more next year. subject to mutation apparently, and Mr. Ross has advised that no addition be made to the equipment on this account, "as a revelation of the vice is imminent." He further advised

that this matter be left for probable a year, operating meanwhile the are liabting generator by means of the H.P., which supplies the day load, and it is limited to 50 or 60 H.P. To change this current to the generator of one of the Corliss engines would not be economy, and the Whig save without desiring to collide with any

A point of greater importance this, that the lamps at the corners were not giving the highest satisfac tion; They had to be placed in the centre of the street, and in the work, and the addition of twenty new lamps last year, there was of cessity expenses as follows:

wire (Flexible)

partment, directly or indirectly. The cost of the work is going into the bylaw on which the people will vote. If to do, the consumers, out of their the power to Canadians, as municipalitime it should be observed, incidentally, that this is an advantage the city ! is being made at eight per cent. upon city, on the other hand, suggests an our neighbors a favour. investment of nearly \$4,000, in the are light system, without compensation to the light department. A private corporation would have made the lamp, if any favor were desired in the way of street illumination.

Total for Gas Plant

The financial phase of the case-Will the project pay ?-will be discussed in the next article of the series.

Our School Expenses.

The agitation for the fifth class in the public schools is not producing any strong or marked effect in the community. It is one thing to suggest the class. It is another to show the necessity for it. One has only to consult the curriculum for a fifth class in order to see that it is pracand its institute, so far as the obligatory subjects are concerned.

\$500.00 to enquire whether the institute, 475.00 equipped as it is at large expense, and capable of doing a larger work than that which is committed to it. should have a class established in connection with the public schools and to do the same work. If the institute would take up for a time the subjects of a fifth class, there would be the more force in demanding its establish ment. The people, however, are now taxed for high school service and they should not be burdened with any new expenditure for which there not a distinct and imperative de

· Use Of Etectric Power.

The federal government has called halt in the legislation which it has hand with regard to the export of power from the Niagara Falls, The ominion government has not hithero asserted itself on this matter, but ot because it had any doubt about

The Ontario Power company has federal incorporation, but it is enjoy ing a provincial franchise, and unde conditions that are very clear. One half of its product must be at command of the Ontario government, in Canada, as circumstances demands The occasion of the legislation which Mr. Fitzpatrick had given not ice is not apparent. Evidently some notice had been taken of the expansion of the power companies, and the Canadian parliament saw the wisdom of 300.00 controlling the output of the electrical 35.00 energy which the Niagara river pro-115.00 duced. There is no conflict between the 660.00 specting it, but the local government all dead. \$3.901.88 sees the possibility of misunderstand-The city is getting the benefit of this lings and asks for a conference at

rovision to recoup the lighting de posed legislation will-be fully discuss-

Meanwhile private enterprise will not n any way be hampered. Why should it be? The companies will gladly sel the overhauling of the arc light sys the supply they can generate is not sumer will not object. At the same be at liberty to dispose of the surplus

Electric power is not like natural oas. The quantity is not likely to the cost of putting in the service. The harm, for a consideration, in doing

Study To Some Purpose.

The history of the water department very intererting at the present time. It is the municipal enterprise with which our people are most fam of hope. The water service of the city ments, comes that in connection with under company management was not gas holder. In 1904 the able enough, and it warranted expanland for it was purchased on Barrack | sion. Yet the capital was, for some This will allow the city to make a rates, and if there is anything the peo- Such an ordinance is wholesome. But larger quantity at a time, and, as the ple want and should have it is cheap in this community, where shapely feet

holder at one time it was suggested plant in 1887 passed under the control this oil by the vessel load. But the 900 patrons, and revenue within \$10,monopolists killed that idea. They | 000 of what it is to-day. The average annual water rate was \$26.83. The supposted, and their deliveries have water committee at once decided that New gas mains will be located on success there had to be an improvement of the plant. And so in 1888, (one year after the city became its owner) there was an issue of debentures for \$120,000, Again in 1889 and in 1890 there were issues of \$140,000 and \$24,600. Here was a debt \$284,600 incurred within three years, at 44 per cent. for money was not as

cheap or easy then as now. Three times later there were add tions to the debt-\$13,000 in 1893 \$15,000 in 1896, and \$3,500 in 1899, The debenture debt reached its highest point in 1896 when it was \$284,900. It is however gradually decreasing at the rate of about \$18,000 or \$20,000 year, and at the same time there now accumulating a rest fund and surplus which will be equal to the demands of the department, in new machinery, without appeals to people in the way of loan by-laws.

Now mark the growth in consumers? Beginning in 1887 with 900 there were in 1891, over 2,000; in 1897, over 3 000; and in 1905, 3,700. There was, consequence, a rapid increase in revenue, and four successive drops the rates, of 20 per cent., 25 per cent, Under these circumstances it is well 15 per cent, and 121 per cent. The average water rate fell from \$26.83 per annum per consumer to \$9.49. Here then lies the secret of prosperity. The larger the number of consumers the larger the revenue, and the ease and

comfort of the financial position. Of course the water plant is less subject to damage and wear and to than the electric light and gas plants their running capacity is ver great. Assured of patronage the cibusiness should be most successful.

Editorial Notes.

Will the \$85,000 by-law carry? Do you want gas or electric light? Or do you want them at lower rates ! Even more. There is the inference Then you'll get out and do some thing for the scheme.

The attractions on Victoria day were not equal to expectations. The amusements must be solid and continuous in order to draw the people to the city year after year.

Mr. Goulding, of the New York legislature, says a state senatorship is worth \$50,000. It may bring \$100,000 to some men. What is the source of income? Could Mr. Goulding not give the people a tip?

The opposition at Ottawa is talking nothing but scandals. The idea is to discredit the government, if possible. openings for it, and it does not take much of a peg to hang a grievance on.
