You can heat

your farthest room

By installing a combination hot water and hot air heater. By this means you secure a quick warmth when the fire is started, combined with ample ventilation, while the hot water radiators in more distant apartments and at outside walls assure a uniform heat throughout the house.

BUCK'S "LEADER" Combination Heater

Is adapted perfectly to the varying seasons of this country. The smallest fire can be perfectly maintained in the spring and fall months, giving the needed warmth by hot air, while in winter weather all the advantages of hot water heating are automatically secured.

Besides, it burns less coal than any other heater, and that soon saves its whole cost. Write for our heater catalogue.

It tells a lot of things about heating that are worth knowing.
