Developments in the last few days, as reported by the press and verified by the Company's officers, again attract public attention to the famous Sunburst Mines-having added 280 acres of rich lead and zinc land in the heart of the world's richest producing district to original holdings, the Sunburst company has ordered the permanent equipment for shaft No. 3.

fins on Sunburst Mines

Machinery being installed and work on No. 3 shaft immediately resumed. Drifting being pushed to connect the No. 2 and No. 3 shafts, which, according to the drilling, will open up immense bodies of ore for the full distance, which is about 500 feet. The Eastman Development Co.'s White Eagle Mill, which was started within the last 60 days, is now producing some eight to ten ton's of zinc ore per shift-being the record breaker of the district so far. This property is immediately to the northwest of the Sunburst property. The Clarissa, to the southwest, has made a phenomenal strike in the last week. The opportunity to share in this wonderful fortune making is now presented by the development of the Sunburst property. Millions will be taken out of this district in 1907, and shrewd investors are now seizing their opportunity to reap a golden harvest from the vast mineral wealth of the Baxter Springs Camp. Many properties are now returning from 24 to 120 per cent, dividends on the investment.

Immense Ore Bodies Proven Up

The Sunburst Mining Company now owns a vast property in Quapaw Reservation, Indian Territory, generally known as the Baxter Springs District. The history of the company is well known to the public. The great richness has long been admitted. Now development work proves the most sanguine expectations. The Baxter Springs News of December 6, 1906, says:

The Sunburst is showing up some mighty big ore the past week. J. C. Bryner, who is doing the development work, brought in samples of his latest ore taken out of shaft No. 3, and it certainly shows up fine. This shaft now has 30 feet of drifting to the south, showing rich ore all the way, and the deposit encountered the past week is the same as the Hobo mine is cutting in its north drifts, which are only eighty feet to the south, and which are being driven north to connect with this south drift of the Sunburst. The Indiana, just to the west, is showing up remarkably rich lead and jack in its east drift. Gatlin is encountering the same to the east and north, thus demonstrating that immense ore deposit covers the Ayers-Sloan, White Ragle, Western Mining Co., Omaha, Winner, Good Luck, Hobo, Gatlin, Indiana and Sunburst leases, all of which are within a radius of a few hundred feet of each other. This is the richest deposit yet opened up, and while this is a fact it is owing to the intense development in this particular section of the camp, which is proving up the drillings which have been made since the camp started."

across the state line in the Quapaw Reservation, Indian Territory, and immediately adjoining this property are good producing mines lils, which are making their owners fich. Just southwest is the by the Whitneys of New York. On every side we are surrounded

n of the Baxter Springs Camp. Look at the map and you will see unburst holdings are the very heart of this section. To the north rk Horse, Isley, Tipton, Magska, all well-known properties. To re the Sunnyside (the oldest mill in camp). White Eagle, Indiana,

MAP OF DISTRICT SHOWING SUNBURST MINE

Why Stock is Now Offered at 8 Cents a Share! This issue of fully paid non-assessable stock is for the purpose of procuring immediate funds to build a officentrating mill, equip the plant with hoisting machinery, and continue development work and put day and night hifts to work—in a word, to apply to this immensely rich property the same development that is resulting everywhere around us in paying great dividends and enormously enhancing the value of the property. Have you ever eard of a failure in a true lead and zinc mine? Have you not heard on the contrary of the fortunes taken out ight in this district, not by one, but practically by all mining plants in the last few years? Have you ever had the prortunity to get in on the ground floor of such an investment? At this price the immense profits simply depend on this: Are the facts such as we have stated? Now, this we prove in detail—we will even arrange to take you to the mine—we refer you to any of the reports on this property—to banks—to engineers—to the evidence of surrounding properties; we lay the proposition before your business judgment, with the full appreciation that you owe it to yourself to investigate this simply as an investment in a commercial enterprise.

ENGINEER'S REPORT.

In compliance with the request of the officers and stockholders of the Sunburst Mining Co., a detailed examination of property was made Oct. 1st. 1906 by M. S. Parker, the well-known mining engineer and member American Society The Sumburst Mine is located in the southeast corner of Section 29. Township 29, Range 24, east of the Indian Merin, in the Quapaw Reserve, Indian Territory. It is joined on the south by half its width by the famous Hobo Mine, shafts north of the Hobo, on the Sunburst, show the same grade of ore, and at the same depth and of same thickness, ise timaha Mine, which is now successfully operating a new 150-ton mill, also joins the Sunburst on the south, and have drilled along their north boundary, striking the same body of ore as developed by prospecting over the line on the

The Hobo and Omaha Mines on the south have been prospected along the line of the Sunburst by drill holes and the esent working shafts and drifts which verifies the results of the prospecting done on the Sunburst Mine, north of the This mine comes under the blanket formation class. Out of the last eleven holes drilled, only two holes were barren of lead or zinc ore, most of them showing lead and zinc ore in paying quantities, while some of the holes drilled showed very rich deposits of lead and zinc.

One of the drill holes on the Hoho Mine showed very rich cuttings; within a foot of this hole was a blank spot 50 feet in diameter. The shaft of the Hoho Mine was sunk within 8 feet of a drill hole showing a very rich zinc ore, and went dwon through such a spot—no zinc ore being encountered—w thin a feet of the shaft walls very rich zinc and lead ore

The Thickness of the ore body, as shown by the drill holes, is from 15 to 30 feet. Ore is struck in shaft No. 3 at 57 feet depth, and the shaft is still in the ore at 75 feet. The drill cuttings at this shaft showed ore down to 91 feet depth. From all the drill holes this depth, viz., 91 feet appears to be the floor or bottom of the ore body, and is very uniform. The roof, however, varies in depth from the surface, 57 feet being the nearest that it comes to the surface while at places it is shown to drop down to 80 feet indepth, but the average depth to roof is very close to 65 feet. This would refreate an average thickness of the ore body of about 25 feet.

Three shafts have been sonk. No. 1 staft, 51 by 8 feet is down 28 feet, well timbered, and has good hafthouse and derrick. From this shaft prospect crifts have been driven, in all about 250 linear feet, mostly in lead-bearing ground. A small office building is near this shaft. Shaft No. 2, 54 by 54 by 50 feet, well timbered, with shafthouse, derrick and boiler house in good repair. From this shaft a drift is driven north 20 feet, then west 50 feet. Head of west drift is in good ore. The face of this drift is in zone ore, while the bottom is in rich lead ore. This shaft should go down to 10 i at depth. This will give a 20-i at face of ore. Shaft No. 3, 54 by 76 feet, well the bered—a first-class shaft. No buildings unit. A short drift is running south in good zinc ore. The bottom of this shaft is in good lead ore. These 3 shafts, with 18 drill holes, constitute the present de-

aburst is located within four miles of the Frisco Railway. Baxter and Quapaw stations being about equally distant from the mine. A road is projected from Baxter to Miami that will run within a quarter of amile of the mine.

This road is to be a freight and passenger electric road for the accommodation of the mines.

Baxter Springs business men have subscribed \$25,000 toward the building of this line, and every assurance is given that that the road will soon be constructed. This will make transportation of fuel andmine products materially cheaper than at present, although the cost under present conditions is not heavy.

It is needless to say that work at the Sunburst can be carried on the year around the climate in this section being so mild in winter that very little trouble is experienced in mining operations in the Quapaw Reserve.

Summing up the points in this report I will see that you have a first class leadand zinc company. Rarely will one find a

tract of ground so universally mineralized as the Sunburst Mine. If you follow the recommendations I have made regarding development. I feel assured you will reap your reward in good dividends. Trusting that this report will need with the approval of the President and Shareholders of the Sunburst Mining Co., I subscribe myself. Very respectfully yours.

M. S. PARKER. As an investment proposition we believe that the Sunburst M he will certainly pay no less than 25 per cent. We quote from other reliable sources the following figures showing the enormous annual dividends earned by lead and zinc mines in

> Underwriters' Land Co. . . 60 per cent. John Jackson Mining Co. . . 60 per cent. 27 per cent. Compueror Lead and Zinc Co. 30 per cent. Omega Mining Co.
>
> Dinger Mining Co.
>
> Chapman Mining Co. 117 per cent. .120 per cent.

HEMMED IN BY PRODUCING MINES housers of Dollars Expended on Shafts and Development Work Show Ore Runs From 8 to 13 Per Cent-While a Yielp of 4 Per Cent in Center

Creek Mine Has Produced Nearly \$7,000,000. The increasing demand for lead and zinc is too obvious to need detailed statement. Both metals are in steady demand and at steadily advancing prices. The prices have gone up since 1899 from \$51.32 per ton for lead and \$36.61 for zinc to \$82.00 for lead and \$45.00 for zinc. The lead and zinc industry is now right at the front in the great commercial enterprises of the country. This southwestern district produces 80 per cent. of the zinc produced in the

The earning capacity of the Sunburst's property, handling ore that averages from 8 to 15 per cent., can be estimated from the production of other companies. The Center Creek Mining Company of Webb City, Mo., from an 80-acre tract, has taken out nearly \$7,000,000 and is still producing.

The report for the year 1904 shows the following production year from the several properties mentioned: Acres.	during th

Bird's-Eye View of Property.

From these figures it can be seen readily how such large dividends are paid. The Dinger Co. pays 120 per cent., the Chapman 120 per cent., the Omega 117 per cent., and many others yield enormous returns. These profits are possible because of the concentrated richness of the ore,

the fact that it is near the surface, that it requires no expensive machinery, that the buyers come to the mine and take the product right from the bins, that the climate is favorable, that the market is advancing, and the owners of the nine get steadily improving values for their ore produced. This is why lead and zinc mining is the safest and most profitable investment in the world to-day. Do you want 100 per cent. or more on your money?

PRESS REPORT RICH STRIKE BY SUNBURST MINING COMPANY.

From the Baxter Springs News, of November 8, 1906. One of the richest strikes made in the Baxter Springs mining camp, south of the city, for some time past, was that made by the Sunburst Mining Co., operating on one of their properties just east of the Sunburst Mining Co., Hobo. The Sunburst Co. have three shafts in ore, with a large amount of drifting done, and this strike was made in No. 3 shaft, and apparently in the Hobo run of ore, which has always been considered one of the very best in the Quapaw reservation. The farther this run af are is developed the richer it is showing. The Sunburst Mining Co. also has made a very mportant deal the past week by purchasing from the Great Northern Mining Company 280 acres of leases one mile east of Johanna, less tha one mile southeast of the rich strike made by the Irish Muid, and about two miles west of Monkey Hill, where the most famous lead strike was made ever encountered anywhere is the southwest. The Monkey Hill strike showed as much as 28 inches of solid lead of the very highest grade. The Great Northern, which is one of the largest holders of the

best leases in this camp, made this sale the past week.

The purchase of this large tract of land by the Sumburst crowd means important developments in that section in addition to those already made, and, land to the porth of the rich lead strike made on the Charley Bluejacket land to the north of the tract and its purchase by a syndicate of Minnesota iron men, will cause an unusual amount of activity in that part of the camp.

The Sunburst Mining Co. will also start drifting their No. 1 shaft on the tract east of the Sunnyside to encounter the rich strike made to the north of it in the Isley mine. The Isley has encountered ore which will undoubtedly yield all the way from 25 rer cent to 30 per cent. The strike was make near the
