LUTHOR OF "SAM SLICK" WAS PROGENITOR OF "UNCLE SAM."

ed Except By the Very Contrast-Days When Judge Haliburton Lived Down By the Sea.

A journey to Halifax, a ride across lands that form the backbone of Nova Scotia, to the place where the River St. Croix flows out into the broader estuary of the Avon, brings one to the settlement known long ago to the French and Indians as "The Meeting of the Waters," and later to the English as Windsor, the settlement in which it is supposed the Uncle Sam we are familiar with first saw the light.

I. "Reduce lawyers' fees,' says some. "They are a cating up the country like locusts.' Just so, says I. 'A bounty on wheat,' says the farmer, 'for your life.' Would you tax the mechanic to enrich the agriculturist?' says the manufacturer. 'Make a law agin' thistles,' says one. 'A regulator about temperance,' says another. 'We have a right to drink if we please,' says a third.' Don't legislate too much,' says a without books, and it was impossible for him to proceed far without books, but the mere habit of reading, even read-

rts of Fort Edward.

If by this time the tide is rushing in under the two bridges of Windsor, bringing the boats that make this town the third shipping port in all the Dominion, the place but now so dull may exhibit an enterprise sufficient to satisfy even Uncle Sam's en-

where the road forks, the one branch a wood road, suggesting a long dis-used driveway, leading through tangled underbrush under the heavy ere is a peculiar charm about an

The shadowy wood road suddenly emerges upon the wholesome lawn in front of the low, spreading house in which Samuel Slick of Slickville, vendor of wooden clocks, first saw the light, and which was Judge Haliburton's third home in Windsor. "I and my father were born in the same house, but 20 miles apart," often remarked the judge, and it was a fact, for between the two births the building was floated down the River St. Croix to Windsor from Douglass,

East India captain of dragoons, a young woman whose life had been filled with strange adventures, that much of the attractiveness of the third home is due. Together they planned and graded and planted until the place became a fairyland, a marvel of landscape gardening to all comers.

place became a fairyland, a marvel of landscape gardening to all comers, and here together they enjoyed the development of Sam Slick.

What were the sources from which such a character could be drawn?

According to Mr. Slick they yield to laziness and procrastination without any loss of self-esteem. Like many other sluggards they had their conscientious reasons: "When the spring comes, and the fields are dry enough to be sowed, they have all to be plowed, 'cause fall rains wash all lands too much for fall plowin'. Well, the plows have to be mended and sharpened, 'cause what's the use of doin' that afore it's wanted. Well, the wheat gets in too late and there comes rust, but whose fault is that? Why, the climate, to be sure, for Nova Scotia ain't mate, to be sure, for Nova Scotia ain't a bread country."

He Hated Politics. Political agitation never had any charms for the judge.
"For my part," says Sam Slick, "I hate politics. There are cleaner.

The light of love shows the true self as the light of learning cannot.

If library and say, "A fig for your de grees; Mr. Carlyle has told me that this is the true place of my educa-tion, and Mr. Carlyle is good enough for me." His lordship said he wished to protest strongly against such an argument, and he hoped no student would ever believe that the library of this university was intended as anything more than a staff and an assistance.

What could be more fatal than a library without a guide? A young and ardent mind, let loose in the collection of the University of London would, as President Lincoln said, "Browse about indefinitely" without finding any fixed point on which it could concentrate its reading. Rather falo one had better be as a Dutch cow, that was tethered to a peg and could only eat within a limited cirthem without knowing till long afterwards that the books were quite obselete and had been superseded by ject. A student entering a library must go there with an object, and must have guidance. He was quite aware that many eminent men dated their success from their haphazar reading in libraries at home. He would remind those who relied on that argument that those men confin-ed that desultory reading to a very early period of life; if they had carried it on into middle age they would

His lordship went on to say that there were many Royal Commissions nowadays—it was almost the primary function of Government now to ap-point Royal Commissions, but he was inclined to think the Royal Commission most required for intellectual purposes had not yet been appointed It would be a Royal Commission of experts in the various departments of knowledge, who would tell us which were the books that were obsolete on any given subject—the books that had been superseded, and that, for was no student who had not felt that

New Theory of Birth Rate. That a high birth rate does not ne-

essarily involve a larger, effective addition to the population than does an average or even low birth rate, is the assertion of Sir William Dun-bar, the Registrar-General, in a re-port on British vital statistics for 1906. This reads like a new theory on the steady fall in the birth rate,

of a nation's decay.

In too many cases, claims Sir William, high birth rates are associated with excessive sickness and mortality during the first few years of life, the result being that fewer than the normal proportion of children survive for five years, while those who do survive fall below the normal standard of physical fitness.

There is some ground for the decay or to grow corn with dark purple sap, which could be converted cheaply into a good quality of ink, and he believes he has at last succeeded. He has a half-acre patch, the result of a decade of experimenting, and is confident that the ink will be a commercial success.

Silent endeavor for things honorable has greater eloquence than silver trumpets.

more effective population than high rates assembled by the high mortality. Among other facts, the death rate in England and Wales in 1905 was the lowest on record, while only four European countries had lower birth rates. Fifty-eight centenarians, of whom 67 were women, died that year. THAT'S FACT THAT MEDICAL SCIENCE CAN PROVE TO YOU EVERY DAY IN THE YEAR—CARELESSNESS COURTS IT—PRECAUTION PREVENTS—IT'S NOT A CONTAGION THAT STEALS IN UNAWARES IT AMORTICAN Rheumatic Current and why

The death occurred at Wood End, near Chichester, on Jan. 5 of Sir Henry Percival de Bathe, Bart, in his 84th year. Sir Henry, who was the fourth baronet, had a distinguished career in the army, which he entered before he was 16 years old. He went through the Crimea with the Scots Guards, being second in command of his battalion at the taking of Sevastopol. Later he was colonel of the Scots Guards, and was made general in 1879, retiring from active general in 1879, retiring from active the great South American Rheumatic Cure has, in thousands of ceeded by his son, Hugo Gerald de instances, controlled and conquered most stubborn and next to baffling Bathe, who was born in 1871, and cases in from one to three days.
