

The Zinc and Lead Smelters One Side of Question Other Side of Question

As the Smelter Projects are now well under way, it may be wise to indicate briefly the main points to be considered.

Within two weeks after the By-laws have been approved by the people, the site with exemption will be granted to each company, the Smelter projects are to start work on plants, to cost, in the case of the Zinc Project, one hundred thousand (\$100,000) dollars, and in the case of the Lead industry, forty thousand (\$40,000) dollars. These plants will be completed in October, so that employment on construction will be ended. Labourers, carpenters, masons, brick-layers, etc.—for several months. This will cause a very considerable distribution of money in the City during the summer.

After completion of the Smelter Plants in October, one hundred men, or over, (skilled mechanics and workmen) will be employed in the refining of Zinc and Lead.

The average pay-roll of each industry will be about one thousand (1,000) dollars weekly for a guaranteed period of 40 weeks in each of these very busy industries. This is a moderate, being about ten acres of the 143 acres comprised in the old Smelter site, which has so long lain idle—really a burden on the City's hands; and exemption from general taxation for a period of 10 years. Of course, the School taxes will be levied as usual, which will materially add to our funds available for school purposes.

The Gas Range of Highest Efficiency.

If you have already realized the economy and comfort of cooking by gas we know that the exclusive features of the Oxford Gas Range will appeal to you at once.

Its economy of gas—its ease and comfort in operation—its perfect results it gives in baking, broiling and roasting—these are the result of the special features we have introduced into this range.

The Oxford Gas Range is made of heavy-gauge, cold rolled steel throughout—won't crack, warp or leak.

The oven is a most excellent baker. Ventilated so all the fumes of the cooking are drawn off. Lined throughout with asbestos millboard—all the heat your gas generates stays in the oven instead of leaking into the kitchen.

All the burners are in two pieces, and may be removed for cleaning without the aid of tools. Each stove is equipped with giant steamers burners.

The oven door, which drops down and forms a firm, solid shell, is operated by self-closing spring hinges and special catch, so it may be left ajar.

The new Oxford Adjustable Gas Valve is one of the small big things on this splendid range. It regulates the pressure of gas so that none is wasted when the pressure is too strong, and even when it's too low get plenty of flame.

This excellent range costs less than many a poorer one—\$19 and \$20, according to finish.

We also have this range for the use of natural gas, the most successful range ever produced for this purpose.

AN EXPENSIVE HOBBY

HON. LIONEL ROTHSCHILD'S COLLECTION OF RARE ANIMALS.

Has Largest Private Museum in Existence—Book on Extinct Birds—Cost \$100,000—Big Price For a Flea—Employs Zebras for Driving and Farm Purposes—Possesses Many Unique Specimens.

Ordinarily when an author publishes a book he expects to make something out of it. The Hon. Lionel Walter Rothschild of London and Tring Park, England, does not depend on literature for a living. Like some other members of the famous family of financiers, he has a hobby, and a rather expensive one at that. In the collection of rare animals and insects and in publications about them he has spent what to many would seem a very considerable fortune. His zoological museum at Tring Park is perhaps the largest private museum of the kind in existence. He edits reports on the collections of this museum which cost him a great deal, but he is now engaged in the publication of a book about "Extinct Birds" which as a sort of literary and scientific luxury promises to beat the record. This work is said to have cost the author about \$100,000, and only 300 copies of it will be issued. They will be printed in English and sold at \$125 a copy. Thus, even if he sold all the books at the price named, he would be a loser to the extent of over \$30,000.

But \$300,000 is nothing to the eldest son of Baron Rothschild. He spends about as much as that every year in keeping up his wonderful zoological gardens and museum. He has fitted out expeditions to go hunting in the tropics for rare animals, paying high prices where necessary to obtain them.

HON. LIONEL WALTER ROTHSCHILD AND HIS COLLECTION OF RARE ANIMALS

and buying out whole collections sometimes just to obtain one extraordinary specimen. His younger brother Charles, whose hobby is the collection of fleas, has commissioned some Arctic whalers to obtain for him specimens of the fleas of Arctic animals, and there was a story that Charles had offered a prize of \$5,000 for a single example of the flea of the Arctic fox. This was denied, but it was not denied that he had made special inducements to the Arctic fishermen to find him specimens of insects from the polar regions. Charles Rothschild has manifested strange devotion to his singular hobby. He keeps a collection of fleas and birds has a particular kind of flea and that some of them have several kinds, so that the flea affords more diverse material for a collector than any living creature. He has done this from every corner of the world, over 10,000 different varieties. It affords him as great delight to secure a new kind of flea as it does J. Pierpont Morgan to obtain a rare specimen of the work of an old master.

Imperishable Paper.

In the publication of the work on extinct birds great care has been taken to render it as far as possible imperishable. The most expensive paper is used, and the blocks and the color plates cost over a thousand pounds. Among the birds now extinct, or practically so, of which the book has illustrations are the great auk, the white-headed stork, the King Albert's bird of paradise from New Guinea, the Labrador duck and Mantell's kiwi.

The Hon. Lionel Walter Rothschild, though 38 years of age and though occupied with business cares and his duties as a member of Parliament, has attained reputation as a scientist. The study of animals and insects and their collection are with him no mere hobby, but he has written several works on natural history which have been accepted as authorities in their field.

Zebras In London.

He was one of the first Englishmen to employ the zebra for driving and farm purposes. He started the staid British public a few years ago by driving zebras for hire through the streets of London. His collections embrace a wide variety of specimens belonging to the animal kingdom, living and dead, but perhaps he takes the greatest interest in birds. Among stuffed specimens of the latter in his museum at Tring Park is an example of the great auk, with two eggs, bird and eggs together being valued at about \$1,700. Another rare and extinct bird in the museum is the grotesque, whale-headed stork from the White Nile.

Ashes For Horses.

Keep a pan for fresh ashes in the stable all the time. Once a week give about a teaspoonful of these wood ashes and salt, mixed half and half. Your horses will not be troubled with worms.

Sportsmen from Lindsay waited upon Hon. Dr. Reame with the request that a close season for frogs should be fixed for the waters of the Trent Valley. The season suggested is June, July and August.

"REMITTANCE MEN."

Wastrels Pitchforked Into Canada the Land of "Forget."

While a new country offers a splendid field for those who, ambitious of getting on, are handicapped in old lands by the restraints and oppressions of ancient environments, it also offers, or seems to offer, a place in which old sorrows may be forgotten; a place in which the social effort, committed elsewhere, may be forgiven.

The bulk of the people who came out here, no doubt, had regard to the Ten Commandments, and are wholesome in their relations, but human nature is defective, and distance from the scene of the moral lapse is not infrequently desired.

Recently, was noticed a beautiful young girl, in company with a strapping young fellow who, though manly-looking enough, confessed at a glance his social inferiority to his companion. The girl was English. She had a carriage, delicate, delicately tinted cheeks, a mass of golden hair and an accent which told the story of breeding.

Coachman and Master's Daughter.

Inquiries from railway officials, and especially from the officials of the ship in which they had come out elicited that the young man had been the girl's father's coachman in the city of London; that he had dared to make love to her; that his love had, in due course, been returned; and that they had eloped together, he intending to go upon the land in the "Saskatchewan."

There is some strictness of examination now, but the wastrel cannot be wholly excluded. For the wastrel appears frequently in the guise of the gentleman, indeed—the gentleman, only lost to duty, to regular habits, to ambition.

Tragic Contrasts.

The most tragic contrasts of feeling, of condition, are met with among the immigrants.

An army chaplain has been known to be working as foreman of a gang of convicts in the Lake Nipissing district—gentleman in the morning, with that dreadful failing, which some foolish people think they can remove by a bit of parchment.

He was dolled by the men, by the people of the district. He has humor, for he came from the Green Isle, and his stories were side-splitting. He was also an excellent manager of men.

Periodically he would disappear. Not one of the navies ever hinted the cause of such disappearance. He would return in about a fortnight with hands that trembled, and lips that were red and hot.

The Fatal Remittance.

The "remittance man" is a feature of any large immigration. This is the ne'er-do-well young, often handsome, highly educated, in instances, just spoiled—spoiled by softness, by sheltering, in his early youth. His parents are over-fond. Also, they had too much money. The wind must blow roughly upon their darling, who came to expect that the world was made expressly for his pleasure.

He was dull at school; he was plucked at college, and he ended upon manhood without a profession. By and by his father coaxed him to go out to Canada and start ranching, which might answer to his love for outdoor life and sport.

And there have been men of this stamp, who, thrown absolutely upon their own resources in a new country, have "buckled to," and done well, but in nine cases out of ten the remittance is fatal.

It is expected, and when comfort can be had by merely returning to the postoffice, redemption is difficult.

Every centre in the Dominion has its remittance man, and the commercial methopolis is not an exception. Extreme hardship his one of two possible effects—it either debilitates or stimulates. The remittance man might be saved if the remittance did not come.

But, habituated to ease, and sure of the remittance, which will render effort unnecessary, slothfulness becomes chronic, and incurable, and there is a tragical loss to good citizenship; merely because a pampered young lad was not taken by the scruff of the neck at sixteen and told to make his living.

A Hoodooed Ship.

The S. S. Greenland, says the St. John (Nfld) Herald, has gone to the bottom, and many mariners say this is the best possible thing that could have happened to this "hoodooed" ship, for she has been in trouble since first coming to the country in 1872. She had been burned to the waters edge, not a hair occurred on board her, several times she had been on the rocks, and her crew were frozen on another occasion. This time her main shaft broke off Cape Bonavista, and she was swept by the tide and ice far out to sea. Seeing her plight at first, and while near other ships, the crew, all but 25 who included the officers and engineers and firemen left her, but these stood by her. Fearful weather followed, all her canvas was blown away, and she was swept out 215 miles E. N. E. of Cape Bonavista. She was then leaking from frequent nips in the ice and it was but a question of hours when she would go down, when fortunately for those left, the S. S. Newfoundland, that had been out 150 miles, was turning back, saw the distress signal flying and steamed alongside. All were picked off, and in less than half an hour the Greenland was swallowed up by the ocean. Capt. Bragg is on the Newfoundland, and other ships have the balance of the crew.

Conundrums.

If a father gave 19 cents to one of his sons and 6 cents to the other, what time would it be? A quarter to 2.

If a postmaster went to a menagerie and was eaten by one of the wild beasts, what time would it be? Eight P. M.

If a guest at a restaurant ate a lobster and a second guest did the same, what would be the second guest's telephone number? 8-12.

Fused Joints are Air-tight

Fused Joints are used only in "Hecla" Furnaces. They are made by bringing the iron and steel of the radiating chamber to a white heat and fusing the metals into one piece—making a joint so permanent and so tight, that it prevents for all time the escape of smoke, gas and dust into the house.

"Hecla" Furnace

joints are just as tight, after ten years service, as when first installed.

"HECLA" FUSED JOINTS are covered by patents and are used exclusively in "Hecla" Furnaces. The cemented and bolted joints in other furnaces are soon impaired by the unequal expansion of the steel and iron. The cement drops out; the bolts work loose; soon leaving openings through which gas and dust escape. FUSED JOINTS make "Hecla" heating ample, economical, sanitary and healthful.
