"Peerless" Oven Damper Gives Absolute Control.

Most oven dampers have only two positions. They are either wide open or tight shut. The "Peerless" dampers

are adjustable. If the oven is too hot, you can open the damper and keep on adjusting until you get the proper temperature.

This means economy in fuel consumption. With the ordinary oven damper to keep the oven from getting too hot, the heat must be all thrown up the chimney. Then the drafts have to be turned on again, because the temperature drops too rapidly.

Ask your dealer to show you this special damper. Also the "Peerless" Drop Oven Door, Daylight Oven, and Duplex Grates. These points of advantage over other stoves, are exclusive. Write for catalogue.
