MEDICAL BUILDING WHICH WAS FORMALLY OPENED THIS AFTERNOON.

It is One of the Finest on Queen's Grounds—A Description of Both Exterior and Interior.

To-day there took place with considerable elation, the formal opening of Queen's new medical laboratories building, than which there is no more imposing edifice on the university grounds. Among the eminent speakers from outside points were Hon. Dr. Pyne, Ontario's minister of education, representing the provincial government, which granted \$50,000 toward the erection of the building. Dr. Barker, who succeeded Dr. Williams Oster in the chair of pathology at the medical faculty of Johns Hopkins University. Dr. Reeve, dean of the medical faculty, Toronto University, Dr. Adams, representing the medical faculty of McGill University, and many others who have attained to pre-eminence in the medical profession. Apropos of this ceremony, which is of no mean importance in the history of Queen's, a brief description of the new medical building will not be amiss.

On approaching the magnificent entrance on the south side, one is at once impressed with the pronounced

THE DAILY BRITISH WHIG, TUESDAY, JANUARY 14, 1908.

THE SPORT REVIEW QUEEN'S SENIORS SHOWING FINE FORM.

Raise of Rink Charge Said to Be Due to Queen's Athletic Association—City League Games Start Thursday.

Queen's had a good practice at the Kingston skating rink, on Monday afternoon, at five o'clock. A full number were out and a good practice was indulged in. The players are all showing fine form and are the best team that has represented the college in some years. Queen's play their first league game on Friday night, in Montreal, when they meet McGill. The team will likely be the same as lined up against Ottawa College in the last half of last Friday's game, and if they play as good hockey as they did then, they should win out.

Queen's III, or "Alie's Indians," had their first practice on Monday, from twelve to one o'clock. Fourteen men were out and a rather strenuous hour's work was put in. Quite a few bruises were inflicted, but an ambulance was not necessary.

Last Evening's Practices. On Monday evening, Frontenacs, 14th, senior and intermediate, St. Georges and Cadets practised at the Kingston rink. Each team had all the players required and all showed up well. The first O.H.A. game will be played on Wednesday, when Frontenacs and St. Georges will clash in the first game of the round. Both teams have been working well and a good contest should result.

Hockey Matches. On Saturday afternoon the Crescents defeated the Beavers, 5 to 3, on Zion rink. The game was fast from start to finish and was witnessed by a large number of spectators.

The City League opens, on Thursday night, at the Royal open air rink, when games in both the senior and junior series will be pulled off.

A number of students appear to be under the impression that it is the rink management that is to blame for the raise in price of admission. But it is stated that those in charge of Queen's Athletic Association or Hockey Association were the main movers in having the general admission raised, from twenty-five to fifty cents. The "Freeze Out" Club at the college is growing every day, and the members will stand by it, and if they do so, Queen's will come out very much in the hole at the end of the season, as the boys are bound they will not pay fifty cents to see an ordinary game. Just think, they say, of paying fifty cents to witness such a farce as that put on at the rink last Friday evening.

"Jock" Harty on The Ottawas. Alderman J. J. Harty, who acted as timekeeper at the Ottawa-Wanderers hockey match in Ottawa on Saturday night, says that "Marty" Walsh played a good, steady and effective game. He went on the ice in a half-sick condition from a cold, but put up a wonderful game. While not quite as fast as Alf. Smith and Phillips, he is a crack centre player. Alderman Harty says that Smith and Phillips are the greatest players in Canada. The feature about the latter is his tremendous speed, his strength and his reserve power. When Ottawa were playing five men to Wanderers' seven,

The building committee had the sum of \$50,000 available and it has been most carefully administered and will not be exceeded. The architects, Messrs. Power & Son, have given us most efficient and satisfactory service and are to be congratulated upon the design and arrangement of the building. Unfortunately, all the equipment is not yet in place, but enough can be given to give a fair idea of what it will be when completed. The thanks of the committee are especially due to the following contractors: William McCartney, Messrs. Hunter & Harold, Messrs. T. McMahon & Co., and the Berlin Interior Hardwood company.

In the new building accommodation is provided for biology, physiology, histology, pathology and bacteriology.

There will also be rooms for the public health work which has grown in a few years to be a considerable tax upon our resources. During the year just ended no less than 1,505 examinations have been made free of expense to the public, and the specimens have come from all over the province, from Fort William and Essex county in the west to the extreme eastern limit.

There will also be the department in connection with the dairy interests.

Pure cultures are supplied to all the cheese factories throughout Eastern Ontario from our laboratories and

problems connected with this important industry are constantly being studied. Dairy bacteriology has had a

considerable development in the past fifteen years in our laboratories.

It is very gratifying that Dr. Barker has been good enough to come to speak to us, to-day, and in the name of the faculty I bid him heartily welcome and venture to express the hope that this is only the first of a series of visits to us.

We are also honored with the visit of Dean Reeve and Dr. McCallum, of Toronto, and of Dr. Adam, of McGill, and we hasten to assure them that we desire to compete with them in the quality of the work done.

We have as many students as we can possibly care for, and there is an

feeling of rivalry on our part, it is only

in the generous spirit of an endeavor

to produce results at least equal to theirs, though we are blessed with few of the material advantages which they enjoy.

Fellow students and colleagues: To-day we dedicate another temple to Asclepius and kindle upon its altar the divine fire. Let it be ours, throughout our day and generation, to strive to maintain and enhance the brilliancy of its flame so that its rays may penetrate to the four quarters of the earth.

On the east side of the second floor

is the bacteriological laboratory, with

experimenting tables for thirty stu-

dents. Across the corridor is an-

other laboratory, fitted with exper-

imental tables and microscope lockers.

Behind the staircase is another clo-

ckroom and in the further end is a

private laboratory with a professor's

private room at either end. The third

room is almost precisely the same

as the second. The top floor, or garret,

has not yet been finished, but it

will be the abode of hosts of biological specimens.

The subjects which will be taught in

the new building are biology, pathol-

ogy and medical chemistry. The

teaching of chemistry to the medical

students apart from the arts and

science students will be a new fea-

ture, and will be in charge of Prof.

A. R. Williamson.

Dear Connell's Address. From October to May, colds are the most frequent cause of headache. Laxative Bromo Quinine removes cause. E. W. Grove on box, 25c.

Campbell Bros'. Fur Sale. Is where people go expecting genuine bargains and they are not disappointed.

Only One "BROMO QUININE," that is Laxative Bromo Quinine. Cures a Cold in One Day, Grip in 2 Days. Every box, 25c.

George Mills & Co. Makers of Fine Furs.

and the community. Even in a progressive institution the changes come slowly and the pace may not be perceived by those most concerned except upon occasions such as the present, which serve as landmarks in its evolution.

You will permit me to refer briefly to the events of importance in the life of the school. In 1855 the first class graduated. In 1858, just fifty years ago, the old medical building was erected. In 1860 the faculty left the university and abandoned the building, but continued its existence under the charter of the Royal College. In 1880 it returned to its own building. In 1892 it again became a faculty of the university. Then in 1901 a considerable addition was made to the old building.

That the school passed through the perils of its first fifty years was due to the self-sacrifice and devotion of the past generation of gentlemen composing the medical profession of this city. It seems most fitting that I should recall, to-day, the names of these gentlemen, once familiar and much beloved in sick-room and college hall, now for the most part long forgotten: John R. Dickson, John Stewart, Horatio Yates, Octavina Yates, M. Lavell, Thomas R. Dupuis, C. A. Irwin, A. S. Oliver, W. H. Henderson, H. J. Saunders, K. N. Fenwick, Fife Power, John Head.

One other name I mention, the name of one who is still with us, but much to our regret, not of us, the Hon. Senator Sullivan, who for many years gave of his best to the school and brought lustre and renown to its reputation. We have entered into their labors and profit by their example of self-denial and fortitude.

To-day we are directly indebted to the present legislation of the province for the building which you have inspected. In their wisdom and generosity they adopted the principle of state aid for medical education, a policy I am well assured will be approved not only of those engaged in this work, but of the whole people of the province.

We are fortunate in having with us to-day Hon. Dr. R. A. Pyne, minister of education, representing the legislature, and on behalf of the faculty I thank him for his personal interest and I ask him to receive and to convey to Mr. Whitney and his colleagues the assurances of our appreciation of what they have done for the school.

The building committee had the sum of \$50,000 available and it has been most carefully administered and will not be exceeded. The architects, Messrs. Power & Son, have given us most efficient and satisfactory service and are to be congratulated upon the design and arrangement of the building. Unfortunately, all the equipment is not yet in place, but enough can be given to give a fair idea of what it will be when completed. The thanks of the committee are especially due to the following contractors: William McCartney, Messrs. Hunter & Harold, Messrs. T. McMahon & Co., and the Berlin Interior Hardwood company.

In the new building accommodation is provided for biology, physiology, histology, pathology and bacteriology. Phillips, simply "ate up the ice," Alderman Hart said. He was dashing everywhere, and showed that he always had reserve energy. Smith is a wonderful player, but will not skate any more than he has to. Every stroke he takes means something. Some hockey players tear about and wear themselves out. Not so with Smith. When he moves, there's something doing, and he's generally in the right spot.

Curling Contests. Two curling matches were pulled off at the rink on Monday evening. A. Strachan's rink defeated G. E. Hague's, fifteen shots to eight, and W. Lesslie defeated Dr. Etherington fifteen to twelve. The ice was in fair condition, and all the rinks
