FOR HEADACHE. FOR DIZZINESS. FOR BILIOUSNESS. FOR TORPID LIVER. FOR CONSTIPATION. FOR SALLOW SKIN. FOR THE COMPLEXION.

Wm. Wood, Proprietor, Montreal, Canada.

CURE RICK HEADACHE.

THE WOOD

We sell for kindling or fuel in the proper condition.

P. WALSH,
55-57 Barrack street.

Weak Kidneys

Weak Kidneys, surely point to weak Kidneys. Nerves, the kidneys, like the heart, and the stomach, find their weakness, not in the organ itself, but in the nerves that control and guide and strengthen them. Dr. Shoop's Restorative is a medicine specifically prepared to reach these controlling nerves. To doctor the kidneys alone is futile. It is a waste of time, and of money as well.

If your back aches or is weak, if the urine is dark, or is dark and strong, if you have symptoms of dizziness or other distressing or dangerous kidney disease, try Dr. Shoop's Restorative via mouth-tablets or liquid—and see what it can and will do for you. Druggists recommended and sell.

Dr. Shoop's Restorative

"ALL DEALERS"

You Can Rake The Town Over--

You can tramp from end to end of it for better coal than we supply, and then not find it. We know good coal when we see it—that's what we buy; we hope you do—then you'll buy what we sell, the celebrated Plymouth coal—all sizes.

R. CRAWFORD
Phone, 9. Foot Queen St.

You Can Rake The Town Over--

Sometimes an automobile won't work for a cent.

THE WHIG, 75th YEAR

DAILY BRITISH WHIG, published at 206-210 King street, Kingston, Ontario, at 25 per year. Editions at 2.30 and 4 o'clock p.m.

WEEKLY BRITISH WHIG, 16 pages, published in parts on Monday and Thursday morning at \$1 a year. To United States, charge for postage has to be made 50c. for Daily; 50c. for Weekly.

Attached is one of the best Job Printing Offices in Canada; rapid, stylish, and cheap work; nice improved presses.

Managing Director.

Daily Whig.

THE FUTURE OF BOURASSA.

La Patrie, now a most pronounced Laurier admirer, is authority for the statement that Mr. Bourassa will not "interfere" in the next federal election. A good deal depends upon the meaning of the word "interfere." Mr. Bourassa will take part in the next election, or in any election in the near or remote future. He is on the eve of a great future if he carries himself with discretion.

He was regarded as a bumptious individual, though exceedingly able, while in the commons, and he made some trouble for himself and others by his independent criticism. He surprised the country, however, when he abandoned his place in the commons, with its munificent indemnity, to contest a seat in the legislature. He surprised it still more when he defeated the premier in Montreal. He has risen high in the estimation of his countrymen, because he is a fascinating speaker, and because he stands for the highest ideals in public life.

So far he has been regarded as a disturber, as a critic and not a nation builder. Now he must begin his constructive work, and it will not be confined, presumably, to one field of action. If he can make good his promises, doing for his generation and his race what only the patriot can do, serving the people without any suspicion of self-interest, and favouring nothing which does not make for the public good, he will grow in power; and if he follows this course only it matters not in what election he participates. It will not be an interference in any case.

The slaughter of the innocents on July 4th in the great American republic goes on. The people believe in a patriotism—that is created by noise, and the offering of an hundred lives annually is a trifling circumstance.

SAVE THE LANDMARKS.

The mayor is moved by a proper impulse when he seeks to preserve certain historic spots in this city. They are not named at present for obvious reasons. It will take some time to perfect the plans, and meanwhile it is not desired that there should be any interference with his designs. Elsewhere the historical societies are active in the work which now engages Dr. Ross' attention, and for the reason that it is fitting occupation for an institution of this kind.

Historical societies do not in some places exist for the purpose of reviving certain memories, however sweet they may be, or of flashing upon the canvas the picture of some old place which will never lack for distinction because of the association of notable events with it. The vandal spirit is not doing the wretched damage in Kingston with which it is usually credited, but the commercial spirit is removing one by one the landmarks that connect the city of to-day with the city of a century ago.

It will not cost much to save what are left of the spots with which so many historical incidents are connected, and it should not cost much in an effort to raise the funds which will put them forever in the keeping of the city or its societies. The absence of a keener interest in the subject is due, perhaps, to the fact that there have been, until lately, too many of these landmarks, and the public mind has not been troubled about the loss of them.

The public indifference will sooner or later pass away, but not before some of the objects of greatest interest have also passed from view.

London the lesser, under the lovely and pure rule of the Whitney government, which does things, has a new election scandal. Twenty-three deputy returning officers out of fifty-three handled ballots which were not initialed. What does all this mean?

CITY HALL FINANCING.

The council could not reasonably come to any other conclusion, with regard to the assessment of the power department than it did, and for two reasons: (1) That the question should have been discussed at the usual time, when appeals for the work of the assessor are in order, and that no excuse on this point can avail. No private owner of property can be heard outside of a given period, which is fixed by law, and the city should comply with this law uncompromisingly. (2) That the assessment having been accepted by the power department when it was made, and the tax rate of the year struck, a change was practically impossible.

The argument of an alderman—that if a private company had offered the city lower charges for the lighting of streets in lieu of a fixed assessment, the city would have accepted—may be such as would have prevailed under

other circumstances. One thing is very certain—that the time to get a good bargain is when the parties to it meet on equal terms. The council, which wanted light for the streets, lots of it at a reduced rate, should have been forced to grant the concession the council of this year refuses. Of course the majority (outside of the power committee), can do as it pleases at any time, but it is amenable to reason and it has some regard for a square deal.

It is with regret that one hears the intimation that with the exaction of the taxes now imposed the power department will not be able to make ends meet. It is not a pleasant announcement, and an announcement which the people expected to hear. There may be a limit to the earning power of a plant in this city, but without the profits which stockholders deserve, and the burden which the street railway was formerly, there should be all that the citizens are now getting, a better service at a lower cost, and a revenue sufficiently large to meet every financial contingency.

The great desideratum is a management which is consistent in its plans, which works from a definite understanding of every detail of the business, which is as careful as it is progressive in its policy. The defect of municipal management, generally, is the changing committee, each one having fads or fancies of its own; each one prone to make experiments which may not work out to its complete satisfaction. The technical branch of the business is practically under the direction of an expert; the financial side of it must be similarly, in charge of a master of accounts or the city will never be out of trouble with the department.

There are some conservative papers which will not endorse the attempt to steal the Stormont election. The Sarnia Canadian is one of them. It wants fair play. The struggle for a seat is such that one would think the government was short in its majority.

THE GOSPEL THAT LIFTS.

Dr. Eby, at one time a minister of the Methodist church in Kingston, now a representative of the great moral movement, is preaching some very remarkable sermons in Toronto. In his latest he made this bold declaration:

"Our duty is not in heaven nor to get ready for heaven, but to plunge into our work on this earth and do what we know is God's will; if we fall by the way we shall fall into our rightful place in heaven."

The man in the pulpit who is getting the most attention deals with the great moral issues of the day. He will find much in current life to confuse and confound him. He will see the necessity of ethical teaching to the end that men may learn their proper relation to the state and to each other. He will get down, like Dr. Frank Talpage, of Chicago, among the poor wayfarers, will catch their groans in the stress of life, and preach the gospel of helplessness and love. Just as the army men will listen closely to what one will say who has been at the front, and on the firing line, so will the working classes (and they represent the great majority), listen while one who has been with them in the smoke and the grim talks of the higher and the better life.

The Bible has been described as an exhaustless fountain of truth, and it is, too to the preacher may go at any time for illustrations as to the causes which lead to the rise and fall of men and nations. It is the invaluable treasury whence one draws inspiration for didactic teaching. But there is much in life that calls for sympathy as well as instruction. Shakespeare has made the thought imperishable, that there are books in the running brook, sermons in stones and good in everything. The landscape, the life abroad, the very grind of the machinery which one feeds or attends in daily devotion, is telling some story which it needs the seer to interpret.

Is it not the fact that in our churches there is too much said about the dead past, about the memories of other days, about the things that are crystallized in history, and too little about current events, about the things that have a pertinent effect on men and their occupations? Not that the one and only subject of interest is the relation between capital and labour, as some persons assume. There are other themes—how the leisure hours may be spent; how the tired brain may be refreshed; how the worries of business and industrial life may be soothed; how the ideals of the parents may be implanted in the children; how the careless may be interested; how the fallen may be lifted; how the average man and woman may be raised out of their sordid selfishness; how the sinner at home may be soothed and satisfied while the shepherd of souls is away upon his holidays.

Oh, Dr. Eby is right. Heaven is not reached at a single bound, as good Dr. Holland has written, but by a patient plodding in life, a faithful discharge of every day's duty, a complete and honourable and cheerful performance of the work which lies nearest at hand. Those who give themselves up to self-indulgence, who care for nothing that does not con-

cern themselves, have no ear for Dr. Eby's counsel, but it is founded on the soundest philosophy.

EDITORIAL NOTES.

The people who go about with revolvers and rifles, and with armed force presume to preach the gospel of peace, have got an entirely new idea of Christianity.

The people of Manitoba have been terribly afflicted with fanatics. Strange that so many of the religiously insane should make the postage stamp province their Mecca.

A municipal iron plant is suggested in Ottawa. Is our council ready for an extension of the public ownership principles? Or has it all the contracts on hand just now it can readily attend to?

The Toronto Telegram is annoyed because Emerson Coatsworth has asked questions about the power scheme. The Telegram is out for a municipal power plant if it bankrupts the city. On that point it is irrevocably fixed.

Later returns show that 17,420 persons went back to Britain from Canada from January to May. Some of them were refugees from the United States and shipped from Canadian ports. Tired of this country and the country tired of them. Is that it?

Mr. Dargavel, M.P., Leeds, is now mentioned—merely mentioned, bear in mind—for the agricultural department of Ontario. He is president of the Eastern Ontario Dairymen's association, and so he knows the difference between stummed milk and cheese.

Montreal has just made a contract with the Roberts syndicate for electric power at from 1c. to 1.8 per kilowatt hour. No wonder the manufacturers go there. They get what they want more than anything else, namely cheap power.

Loyalty in England is not a demoralizing thing. The people never hurrah and boast of what they are doing. But when the honor of the land is touched every man puts his hand in his pocket, or bleeds for his cause. That's the loyalty that tells.

SPIRIT OF THE PRESS

The Gallery Again.

Hon. Mr. Harcourt would abolish Hansard as a cure for parliamentary garrulity. He forgets that the patriots will talk as long as there's anybody in the press gallery.

His Exercise.

Premiers Aquith, of Great Britain, takes a whiskey and soda before beginning a long speech. As there is no three-fifths division in force in that country, the beverage may sometimes be more than two-fifths soda.

Reviving Prosperity.

Stratford Beacon. A hopeful sign is the resumption of work, with all hands and full time, at the railway shops in Montreal and St. Thomas. The railroads are barometers of business conditions. When are the Stratford shops to resume full time?

A Homely Hit.

Of course that statement of Hon. Richard Harcourt at Welland liberal convention, that few public men had ideas, and could not express them if they had, was not intended to include himself. Modest Richard!

Make Them Sizzle.

The opposition at Ottawa is in a terrible hurry to complete the work of the session now, after wasting weeks in useless obstruction. Hold the obstructionists to their work, Sir Wilfrid. Make them earn at least a tithe of the salary a too generous people pays them.

England Leads.

Montreal Gazette. The new armoured cruiser Inflexible, which was designed to make twenty-five knots an hour, on the last test made twenty-seven knots. She is of a class approaching the battleship in strength of offensive armament while possessing all a cruiser's swiftness. The race in naval armament is costly but the lead is kept where it has been for a long time.

Cause For Tears.

Washington Star. A little girl sat on the curb. Her curly head low bowed, And sobbed as though her heart would break. In accents long and loud.

"What is it, dear?" I said to her. And gave her cur's a touch. "What makes you sad on this bright day? Why do you weep so much?"

The child looked up thro' streaming tears. "Because, because," she sighed. "Please tell me," I repeated low. "Why you so lonely cried."

"Because I want another foot." The little maiden sobbed the work of While in the April breezes all Her golden ringlets bobbed.

"Another foot? my darling child." I said in much surprise. "Nobody has more than two feet. Or hands, or ears or eyes."

"I know, but I live in that fat, And tho' it's nice and neat, Whensomebody out of doors I must play in the street."

"And so I want another foot." The child again sobbed hard. "To-day I heard my papa say 'Three feet would make a yard.'"

Blueberries, first of the season, at Gilbert's stores. Large pails \$1.25 or 1 lb. a quart.

RADIUM IS SCARCE.

Less Than Two Grams Exists in All Laboratories.

Radium is a metal of such unusual possibilities that what would happen if a large amount of it should ever be got together in one place is really a matter of speculation, though it is fairly certain that its neighborhood would be extremely dangerous to animal life. But while the amount of radium in the earth's crust is considerable, the quantity isolated is very small.

An estimate is made in the Archives d'Electricite Medicale of the quantities in the possession of well-known investigators. The Curies had once the largest amount; but an unfortunate accident, following on an experiment, robbed them of the result of several years' work. Mme. Curie has now only fifteen milligrams; Sir William Ramsay, Sir William Crookes, Mr. Edison and Prof. d'Arsonval have each twenty milligrams; Prof. Besquerel and Prof. Bordas have each ten milligrams. Other scientific men, doctors for the most part, have about twenty milligrams between them.

As for commercial radium, which is a substance of very variable purity or intensity, it is difficult to arrive at any valid estimate, because it is in such a large number of hands, but it is believed that the amount of pure radium contained in it is less than that which is in the hands of the scientific men we have named. To the quantities of radium mentioned should be added the compounds of radium, especially the chlorides of radium, which have been extracted from the Joachimsthal pitch-blende by Prof. Exner and Prof. Wien. They have nearly three grams of radium salts. But at the highest estimate the amount of radium in all the laboratories of the world would be less than two grams.

Pittsburgh Council.

July 6.—The reeve and treasurer were authorized to borrow \$1,000 for five months to meet current expenses. Voted: John Ballock, royalty on stone, \$2; J. Duffe, stone, \$24; R. Gough, stone, \$26; A. Cowan, work and material, \$10.32; W. Woods, repairing bridge, \$30; G. Wilnot, stone, \$47.50; D. Waller, stone, \$43.50; James Patterson, stone, \$23; Robert Patterson, stone, \$23; James Neilson, work, \$9; John Anderson, stone, \$30; James Mullen, culvert and fence bonus, \$10.25; James Hitchcock, stone, \$32; W. Wilson, work, \$5; Thomas Bell, culvert and drawing, \$5; William Trotter, culvert, \$5; A. Franklin, fence bonus, \$2.81; L. Murphy, stone, \$17; W. Hamilton, stone, \$23; J. Duggan, stone, \$20; R. McLean, stone, \$33; J. A. Jackson, stone, \$33; Robert Wentorne, fence bonus, \$12.50; F. Scott, culvert and work, \$18.75; G. Gates, culvert, \$5; P. McKenna, culvert, \$10.50; Wm. Murchie, work, \$2; G. Maitland, work, \$7.50; George McCormack, gravel, \$7.90; J. P. Bowes, gravel, \$16.60; John Webb, gravel, \$3.50; F. Johnston, fence bonus, \$5; M. Shortell, fence bonus, \$11.63; James Webb, work, \$15; Thomas Shortell, work, \$31; Jas. Milne, fence bonus, \$1.50; Thomas Gillespie, gravel, \$8.60; William Spence disbursements, \$17.50; James Milne, \$45.40; J. E. McMullen, work, \$9.60; F. McLean, culvert, \$5; P. Gough, stone, \$95; John Grier, stone, \$6.10; R. J. Reid, burying Frederick Howe; \$12. The petition of James Wilson and others to extend the term of ditch, granted. Adjourned until first Monday in August.

Present Fashions.

Wood shavings are all that can be brought to mind by a new curled straw which has recently been seen in a made hat.

The angerie hat is now appearing made of ponce or tussor. The simpler it is trimmed the more stylish it is.

Bags of cretonne are seen fashioned like envelopes and having fringed ends and a button fastener. They are especially chic when matching the cretonne used for a finish to the collar and cuffs of a tailored costume.

While the fashion of wearing many rings is not in favor the little finger ring is much in vogue. The plain gold seal ring, bearing the owners monogram or crest, is a special favorite with the young girl.

The latest calling cards are smaller in size than those of a year ago. Mid-lady's cards are three and a half inches by two inches and a half, while a man's card should be three inches by one and a half.

Prof. McKay Says 3 Per Cent.

Prof. G. L. McKay, of Iowa Agricultural College, speaking of a proposal to fix the minimum standard for milk at 3.25 per cent. fat, said: If this were to become a law hundreds of dairymen could be constantly prosecuted for adulteration of milk, over which they have no control. This is quite evident to every creamery man in the country. Many of our fine Holstein cows that have made wonderful records as butter producers, would come under the ban of the law, and some of our other grades and breeds that are not Holstein would at times be condemned. Three per cent. at the most should be high enough for a standard of this kind.

Even the fire-eater will feel quite put out if you call him a coward. The artist's model should have a good hand to draw to.

BAD BREATH

"For months I had great trouble with my stomach and used all kinds of medicines. My tongue has been swollen as green as grass, my breath has had a bad odor. Two weeks ago a friend recommended 'Cavacurets' and I bought a box. I am so glad to say that they have entirely cured me. Therefore let your friends know that I have recommended them to any one suffering from such troubles." Chas. H. Hildner, 114 E. 10th St., New York, N. Y.

Best For The Doves.

THEY WORK WHILE YOU SLEEP.

Pleasant, Palatable, Pepsin, Taste Good, Do Good. Never Sickens, Weakens or Irritates. 25c. per Box. Sold in bulk. The quantity shown is our first choice. Guaranteed to cure or your money back. Solely by Starling Remedy Co., Chicago or N.Y. 50c. ANNUAL SALE, TEN MILLION BOXES.

Another 1908 Improvement in "Hecla" Furnaces

The fire pot is the most effective radiating surface in a warm air furnace. That is why every manufacturer seeks to increase that surface by the addition of cast iron flanges, or pins or corrugations.

As each of these flanges or pins covers a large part of the primary surface of the fire pot there is a limit to the number of such cast flanges as can be effectively used.

The "Hecla" Steel Ribbed (Patented) Fire Pot is a step far in advance of any other fire pot. Instead of thick and sandy cast iron flanges those in the "Hecla" are steel and are neat and clean. Being uniform they can be set so close together that, where we formerly used 19 cast flanges we now use 97 steel ones without covering any more of the primary surface of the pot.

Steel Ribbed (Patented) Fire Pots provide twice as much effective radiating surface as any other fire pots made, and in consequence radiate far more heat with the same amount of fuel.

In a test extending over two years, Steel Ribbed (Patented) Fire Pots showed a saving of 11% in fuel, over cast flanged pots.

Our Catalogue explains other exclusive "Hecla" features viz: Patent Fused Joints, Individual Gate Bars, etc. 60
