

The grates and all the linings of the

Universal Favorite RANGE

can be taken out and are interchangeable from coal to wood, or vice versa, without the removal of a bolt or disturbing the Water Front.

A coal fire can be retained day and night, and one or two turps of the grate crank in the morning remove the ashes and clinkers, leaving a bright and clear fire to start the morning's work.

You take no risk in buying a Universal Favorite, as every Range is guaranteed to cook and bake perfectly.

Anty Drudge's Advice to Mr. Newlywed.

Mr. Newlywed—"Yes, we've got a fine little dove cote. But it's one of those swell apartment houses and they don't allow any washing done. Won't stand for the smell and muss."

Anty Drudge—"Poor boy, you must be nearly bankrupt with big laundry bills. But, get your wife some Fels-Naptha soap and she can fool the janitor. Won't need boiling water. Just use it cool or lukewarm. Rub the clothes lightly and they'll be like snow."

"If I only had some place to boil them I'd wash lots of my light clothes myself—the laundry wears them out so fast," said a young woman who lives in two rooms.

Then she heard about Fels-Naptha. Now she is washing those things herself, without hot water, and doing it far better than if she boiled them.

She has found out that Fels-Naptha cleanses things more thoroughly in cool or lukewarm water, in little time, than if they were boiled till Doomsday.

If you live in a room, apartments or occupy a whole house, take a chapter out of this young woman's experience.

Boiling is unnecessary when you use Fels-Naptha, either in winter or summer.

All that's needed is cool or lukewarm water, and even a bowl or basin will do for a few things.

Follow directions on the red and green wrapper.

TOO BUSY TO EXHIBIT AT TORONTO EXHIBITION

But a visit when in Toronto to the old firm, with its modern methods, expert and courteous attention, will assure you of its continued success.

MADE A NEW RECORD EATS 598 CLAMS BUT LOSES WAGER.

Champion Had the Bet Won at the 400th Clam. But Got Reckless and Tried For 600.

New York, Sept. 5.—The Battery gained a new record yesterday when "Little Neck Silas" came over from Tompkinsville, consumed 598 clams and came within two of winning a bet of \$100.

The event took place at the stand of Dave Everett, which faces the South Ferry. The two brothers appeared, and the larger man of the two, asked Dave if he had enough clams on hand to settle a wager. Everett said he had, and Silas started right in. He could swallow clams faster than any man could open them, and he had Everett panting when he reached the second hundred. But the opener had a reputation to sustain, and he manfully kept at his task. He struggled through the third hundred then took another knife and began again. The man who had made the bet that his friend could not do the trick finally announced "400" and calmly paid over the \$100.

"Why, that's nothing," said Little Neck Silas. "I could go two hundred more without turning a hair."

"Ten dollars more than you can't," said the friend.

"You're on. Begin opening," answered the champion.

On the contest went, and a hundred and fifty more clams went without a gasp. Then there appeared to be trouble but the clams kept on disappearing. The hundred and seventy-five mark passed, and then the end was in sight. At number 198 there was a gasp and it was all over.

"Little Neck Silas," however, entered a protest. He said some clams larger than Little Neck's had been used when the smaller ones were all gone. This was not allowed, however, and he had to give back the \$10 he had got for the first 400.

OVER 100,000 AT EXHIBIT.

G.T.R. Company's Show Attracts Much Attention.

The splendid exhibit which the Grand Trunk have put up at the Franco-British exhibition is attracting a great amount of attention and the English Canadian railway really is the most attractive of the double track scenes, the heavy motive power, the splendid equipment and the beautiful reproductions of photographs from scenes along the line, together with the specimens of trophies of fish and game which are on view, are both pleasing to the eye and attractive to the mind of the visitor. The total attendance in the Grand Trunk building from May 14th (the opening day) until July 23rd, amounted to 106,607 people.

Letters have been received from Canadians and others professing in their praise of this handsome building and exhibit which is a credit to the railway and a big advertisement for the Dominion.

EATING IN ENGLAND.

What to Expect at a British Tea, Dinner or Supper.

An American woman visiting among English friends in Kent writes home concerning the difference between English and American afternoon teas:

"The English eat so much more than we Americans," she says, "and they never seem to be in any way rushed. At the vicarage to-day tea was served in the drawing room (one never hears the word parlor here). The service was put before the hostess, who sat at the extreme end of the room. Near her, in a deep chair, rested the dear old vicar, with all of us grouped around him."

"In the centre of the table was a vast of wild flowers and at one side was a bread-board, heavy loaf and knife, with which very thick slices were cut. These were handed around with delightful informality on a long trestling board, no maid being present."

"There was a plate of hot buttered scones on one end of the table and at the other a dish of small cakes. A jar of jam sat between, along with two high plates bearing parts of loaf cake. It was all so homely."

"At the 8 o'clock supper—and this the schoolgirls shared—there were hot chops, an enormous cold joint, a meat pie and cakes and jam and cheese and beer and cider and such a lot of cheerful talk."

In most parts of England this American woman finds the dinner much more formal than with us, says the New York Evening Sun. All the hot meats and vegetables are brought in covered with big silver or brassia lids to keep the contents warm. The covering of the meat is removed by the maid as soon as the dinner gets ready to serve. Vegetables are kept on a side table and the lids are instantly restored when the guests have been helped.

There are always different sweets and puddings, such as apple tarts, custards and stewed plums. "Dessert" as they call it, consisting of fruit and coffee, is served in the drawing-room, and with it thin slices of bread and butter and small cakes. The coziness of this after-dinner makes up for any formality that attended the dinner.

Of A Contrary Disposition.

The Bohemian.

At the time of the Cherry creek flood, which played havoc with the then struggling Village of Denver, upon the outskirts of the settlement lived, in a cabin, an old character, known as Beaver Bill, and his wife. The fresher carried away everything upon the premises save Bill himself, including his spouse. The loss of her seemed to impress Beaver Bill less than the loss of other things, but a volunteer party worked valiantly to find her for him.

At last, wet and weary, they must faintly report to him failure.

"All the way down stream for two miles, Bill," he asserted.

"Oh, hell," he drawled, disgusted. "You want to do your searching upstream. She's too contrary to ever float down."

Kaffir Swimming Feats.

London Standard.

The Kaffirs are great swimmers. They can do things in the water which other folk would look upon with astonishment. For example, a Kaffir boy can ford a stream shoulder high, running as swiftly as if shot from a torrent. The way they accomplish the feat is thus: Just before entering the water they get a huge stone, sometimes as heavy as themselves, and with the help of a companion place it upon the head. A weight like this gives the boy balance, and he can keep his footing against the heaviest stream. If he were to drop the stone he would be so light that the water would sweep him off his feet. And this is just one of the Kaffir tricks against tide and flood.

Wanted To See Him Move.

Philadelphia Press.

"I am so sorry you are not interested in these aerial flight problems, Mr. Simpkins," sighed the Sweet Young Thing to the Interminable Bore.

"Why?" asked the latter, a little mystified.

"Because I should so love to see you fly."

In The Good Old Summer Time.

You are sure to be attacked with cramps, indigestion and diarrhoea. Keep Nervine handy—it gives ease at once. No summer medicine better for young or old than Polson's Nervine. Try it.

The Retort Courteous.

Philadelphia Letter.

Dr. Copeland objects very strongly to being interrupted during a lecture by a late-comer. One day, while lecturing to a room full of young women, he was annoyed by seeing the door open and a tardy girl come in.

Breaking off in what he was saying, he turned to her:

"I suppose you consider this an afternoon tea. Will you take your tea with or without sugar, lemon or cream?"

And the startling answer he received was: "No lemon, thank you."

Pointing A Moral.

Boston Transcript.

"I think it's a shame that wine should be used at luncheons. We temperance women are going to try to stop it."

"After all, instead of kicking about it, why not use the custom to point a moral?"

"How do you mean?"

"Why, simply by drawing attention to the fact that after her first taste of wine the ship immediately takes to water and sticks to it ever after."

Most of us never waste the opportunity to criticize.

TELEGRAPHIC TYPEWRITERS.

Sends and Receives Without Making Mistakes.

The latest device in telegraphy is a telegraphic typewriter. It can be attached to and placed under any ordinary typewriter, says the Electrical World. When so connected it becomes a complete sending and receiving telegraph instrument, and both sending and receiving instruments record the message.

The only experience required is that of an operator working a typewriter. The message is sent in the same manner in which you would proceed to write a letter on an ordinary typewriter. This same message will be received on the receiving typewriter exactly as it appears on the sending one.

In some respects it resembles the familiar stock ticker and other printing telegraph instruments, but unlike these it makes possible the use of capitals and small letters as in ordinary letter writing. The receiving machine records the message just as written and gives what corresponds to a carbon copy made on the original machine.

There is said to be no chance for mistakes. The machine takes down the message as it is sent. There is no human receiver to make a mistake by faulty hearing or carelessness or neglect, as in the case with the present Morse system of dots and dashes in use all over the world.

The Discipline Of Work.

Collier's Weekly.

Hooligan harvesters are the exception. Jail for the blackguards that give twenty-five thousand decent men a bad name will soon cure that. And if any remain in whom the spirit of riot lingers, a month in the western harvest fields should take it out of them. The west believes that the laborer is worthy of his hire, but no more. There are no shirkers on that job. If the pay is good and the meals hearty, the hours are long and the work is hard and honest toil goes often as not to bed with a backache. It is a safe guess that the harvesters don't feel like high jinks when they are making their way back east. They have earned their money and they are going to rest in a good peace. It does what its hands find to do with all its might. It has a zest of labor as ardent as its summers, as fierce as its winters. The brooding east must ginger up in those wheat fields and it is likely to feel sore in the joints for a week or two after the strain is over. Next to wheat, the west idolizes work. It is a downright sin to be idle in that land of many opportunities. This writer once saw a boy of eight years in custody of a Northwest Mounted policeman. The boy had stolen nothing, had begged nothing, had wronged nobody. But it was harvest time and he simply wouldn't work when the wheat fields were crying out for every strong pair of arms in four thousand miles. For that crime he was being taken to Regina to do a month in jail. Such is the spirit of the west. We may rely upon it to tame the rowdy harvesters.

Lighting The Sacred Flame.

Of all the fires that once lit the sky in the north of England on Old Midsummer eve, there was but one alight this year. This was at Whalton, a little village near Morpeth, Northumberland, Eng. This is the Bel fire which Scotland used in olden times on May Day. In Northumberland it has been Christianised to St. John's fire, but the ceremony belongs to days long before Christianity came to the north. This July the Whalton men and lads have once more got in the wood for fuel, landowners allowing even a measure of heavy timber to be carted for the neighborhood that goes on round the fire. No one knows for how many ages Whalton has kindled the blaze on each Midsummer eve, but records of two hundred years show that the custom has never been broken.

Tremendous Cost Of Crime.

Rev. Dr. John Flagg in Leslie's Weekly.

Christianity is the greatest creator and conservator of values; sin is the greatest destroyer of values. The cost of crime to New York city for one single year is enough to build two subways a year; the cost to the state enough to pay in two years the whole cost of widening the Erie canal from Buffalo to Albany. The cost of crime to the United States is enough, if our people were righteous for two years, to pay the whole national debt.

World's Largest Boulder.

The largest boulder in the world is in Victoria, Australia. The name of "The Leviathan Rock" has been given to it. Its estimated bulk approaches, if it does not really exceed, 300,000 tons. This great rock may be likened to an immense egg lying on its side, the part resting on mother earth being not more than 30 yards square. Hundreds of persons could find shelter under it from a passing storm or the sun.

Tells A Satisfying Tale.

Modern Methods.

When advertising don't hint about your goods, but explain them. Don't think because you know your goods by heart that the reader shares your knowledge. There is a good deal lost in depriving people of information that they really need, but there is nothing lost if repeating to them something they already know.

Quick Cure For Biliousness.

FOUR MILES IN AIR WOMAN UNABLE TO LIBERATE HER PARACHUTE.

Waited 30 Miles Before Balloon Landed—English Parachutist Has Novel Experience.

London, Sept. 3.—Miss Viola Spencer, the famous parachutist, has had a thrilling adventure and a most remarkable escape from death.

On Thursday Miss Spencer was engaged to make a parachute descent at a sports meeting near Nottingham, but when the balloon rose to a height of about 2,000 feet she found herself unable to liberate the parachute. The result was that she was carried helplessly by the balloon for a distance of thirty miles. She managed to keep her frail spirit about the balloon, but where, by which time she was almost perished from the cold. At one time the balloon rose to a height of about 20,000 feet, or about four miles.

"I had a horrible feeling," said Miss Spencer yesterday, "that I should be frozen. How I wished I had brought my wrap or coat, I had only a muslin blouse and a blue serge coat. I felt the cold keenly when I was up in the air a height of 10,000 feet, but at 20,000 it was unbearable. My hands were quite numb, and I had to knock them against the wooden ring of the parachute to restore the circulation."

"And next," Miss Spencer continued, "I had an awful fear that the balloon would be blown out to sea; but, happily, I was not so fortunate. I had brought all places in the world, do you think we did come down?" she asked. "Actually in a clover field! Could it have been better? Talk about landing in clover!" and the fair parachutist laughed merrily.

"But I felt confident after a time," Miss Spencer declared, "that if I could only manage to keep my seat in the parachute the balloon would come down all right. What alarmed me most was the possibility that I should fall from cold and fall off. At one time, before I had gone up very far, I tried to console myself by humming snatches of a comic song, and a queer idea struck me to sing 'Up in a Balloon Boys, but I stopped short, because in view of my dangerous position I thought it was improper and imprudent. Unfortunately, I could not recall any hymns," she added.

Miss Spencer then described the scene as it appeared to her in the clouds. "I remember being impressed with a sense of awful stillness around," she remarked. "It was terrifying. But I got accustomed to it. The moon was shining clearly, and all around was bathed in its pale light. It was impossible to see the trees, but one of the most beautiful sights I saw was the reflection of the moon in a river as we passed over it. It seemed to dance on its placid surface. A pretty scene of a different character was the lights of Nottingham as the balloon bordered upon it. It was all so strange, with the large buildings looking mere specks down below."

Miss Spencer then explained how the mishap which led to her remarkable adventure occurred. The parachute was attached to the bottom part of the balloon, and her seat was a little webbing loop not more than four inches in width. On either side she clasped the ropes for support. In appearance the loop would be like a garden swing.

The parachute is detached by pulling a piece of cord which releases a steel catch round which are twined the strings of the parachute. "I tugged and tugged," said Miss Spencer, "but I could not release it, and I am convinced that the crowd must have trodden on the apparatus when it was on the ground. I shall never again go up if the crowd comes into the enclosure."

"Of course I had no control over the balloon, which was forty feet above me. The joy and relief I experienced when my little pocket apparatus had been shown me that the balloon was coming down was great."

"I dropped near a little village called Trussington, near Rearsby, in Leicester. I immediately jumped off, and scarcely had I done so before the balloon started off again, and I chased it across two fields. Seeing a house, I gave up the hunt, and I stayed at an adjacent house for the night. At 5 o'clock next morning I discovered the balloon half a mile away. It had dropped in somebody's back garden, and not only scared half-stiffed the people in the cottage with its escaping gas."

In the ordinary way, Miss Spencer said she would have descended with her parachute in ten minutes. The crowd at Heaton, near Nottingham, where the sports and gala were held, anxiously waited to see her come down. When she failed to do so there was a search for her all night long, in which several motor cars were engaged.

Although Miss Spencer has made 300 parachute descents, this is the first time such an accident has happened to her.

A Mosquito Trap.

Chicago Tribune.

A mosquito trap looks big in importance and small in size. It is the invention of Maxwell Lefroy of the Indian entomological department, who has found it distinctly effective in a tropical residence.

The trap is a small box some twelve inches square and six inches wide fitted with a hinged lid provided with a small orifice, over which moves a sliding cover. The box is lined with dark green baize.

World's Largest Boulder.

The largest boulder in the world is in Victoria, Australia. The name of "The Leviathan Rock" has been given to it. Its estimated bulk approaches, if it does not really exceed, 300,000 tons. This great rock may be likened to an immense egg lying on its side, the part resting on mother earth being not more than 30 yards square. Hundreds of persons could find shelter under it from a passing storm or the sun.
