The Up-to-Date Skates

Lighter by Ounces Than Any Other - And Stronger

This light-weight skate means that you can go further with more speed and less fatigue than if you were using a heavy blade. The Automobile Skate is lighter by ounces than any made-and stronger.

The Automobile Skate

The blade of the 'Automobile' Skate is of tempered nickel steel-the toughest metal yet compounded. Do not confuse nickel steel with nickel-plated steel. The former is a metal made from the best of steel mixed in the furnace with pure nickel. It forms a powerful, tough composition and is used extensively as armour plate to withstand the attack of steel projectiles. It turns out to be also the best thing vet discovered for the making of good skate blades-nickel steel permits a lighter blade of great strength and of such finish that it improves the appearance of the skate.

Although nickel steel contributes much to the lightness and strength of the "Automobile," it is the aluminum alloy top that makes for perfection in these particulars. Aluminum figures as the lightest metal in the catalogue, but it can only be applied to such articles as skates by expert grading and mixing with baser metals. The manufacturers of the "Automobile Skate" have discovered a process for the making of skate tops which has proved absolutely satisfactory. So wonderfully good indeed that the Company stands behind every "Automobile Skate" with a pledged guarantee for one year against breakage.

We stand behind this skate with an absolute guarantee for one year against breakage.

Write for new book of hockey rules and catalogue.
