### BATHS AND THE HEART.

Baths Increase It.

The effects of warm and cold baths spon the size of the heart have been discussed a great deal by physicians, and lately the method of measuring the dimensions of the heart proposed by Moritz has enabled observers to determine changes in this respect quite ac-

Rudolph and Beck have studied by this method the changes produced in healthy and diseased persons by the nistration of cold and hot baths. All patients subjected to these experi-ments had the size of their hearts measured immediately before the baths and the operation was repeated as soon after the bath as circumstances per-mitted, the time between the end of the bath and the estimation of the changes in the heart not exceeding two or three

The results obtained were quite uni-form. The effect of the hot bath was to diminish the size of the heart, the mount of the change being quite con-The effect of the cold bath was to ncrease the size of the heart, - no hange being noticed in one case only.
