THE SPORT REVIEW

CANADIAN RUGBY GAME OPENED THE EYES

Of Thousands of United States Sportsmen—The Great Kicking By the Half-Backs Amazed the Onlookers.
Lewis J. Henry, formerly editor-in-chief of the Cornell Sun, said: "Whatever may be the verdict of the critics whose word is law, or closely akin to law in such matters, the fact remains that throughout the Hamilton-Ottawa game, a good many thousand American sportsmen had their eyes opened to the fact that there is in existence another style of football whose possibilities for holding the interest of the spectators is equal to if not greater than our own game, and which, as experience proves, has not the drawback of excessive danger to the participants.
"It is this rule barring interference, then, that keeps the play open and so spectacular. End runs without interference are almost as common as line plays. Therefore, the team on the offensive is confined practically entirely to passing and kicking. The cleverness gained in these two departments of the game, particularly the latter, through constant practice, is marvellous. The rugby players, when about to be tackled, surrounded by other players, have an ability for getting off in an instant high, accurate and long distance punts. The ball seems to be travelling back and forth most of the time, retaining possession of it not being nearly so important as in our own game. Consequently the rapid shifting of the scene from one territory to the other, with the accompanying uncertainty of what the developments may produce, adds a keenness to the interest not found in our game.
"It is noteworthy that in spite of the loose work at times the attention of a New York crowd was held closely throughout the contest, although they had to stand up, and the interest increased steadily with growing familiarity with the details of the game."

General Sporting News.

New York Telegraph—Canadian rugby football will never do for us; it's not brutal enough.
Manager Bresnahan, of St. Louis, will consider "Bill" O'Hara's plea to be allowed to play baseball with Toronto.
The baseball managers are looking over samples of baseball shoes without the deadly spikes. All kinds of substitutes have been suggested.
Ottawa stands to lose several thousand dollars by not announcing the Stanley Cup dates sooner, as both Winnipeg Shamrocks and Edmonton Wolves now to make an attempt.
Montreal Star—The American critics should also remember that the Canadian game is not played by stuffed students, who go to college to play football and do nothing else.
Montreal has practically accepted invitations from New York, Pittsburgh and Toronto for hockey games this winter, and Toronto Argos will play Montreal here some time during the season.
The managers of the National Baseball League voted to pay the late president's (H. C. Pulliam) unpaid dues, but to limit the interest on \$5,000 each year until further notice.
J. G. Burnett, of Redford, announces that arrangements have been completed for a series of games in New York city between the greyhound town sports aggregation and the Cobalt hockey team. The team will journey to Gotham from Pittsburgh.
Ontario has supplied the big base ball leagues with four good catchers, all of whom are now at their best. The quartette comprises "Ike" Owens and "Jimmy" Archer, of Toronto; "Monney" Gibson, of London; and "Nig" Clarke, the Amherstburg back stop, whom Detroit is trying to buy from Cleveland.
That the Canadian style of game would remain as free from injuries in the hands of American football players, says Popular Mechanics, and that "Nig" Clarke, the Amherstburg back stop, whom Detroit is trying to buy from Cleveland.
The name of John A. Heyder was withdrawn at the National Baseball League presidential election, and that of Robert Brown, of Louisville, Ky., substituted. The warring factions voted straight tickets, Robinson of St. Louis, backing the compromise candidate, so that a deadlock resulted. Heyder is still in the race.

CLOCK WITH 20 DIALS.

Tells Time All Over World—Gives Day and Date.
San Diego, Cal., has a wonderful clock, with twenty dials, which tell simultaneously the time in all parts of the world, also the days of the week and the date and month. It stands twenty-one feet high and four of its dials are each four feet in diameter.
The master clock is enclosed in plate glass, says Popular Mechanics, so that every action can be seen, and the whole is illuminated every night. It is jewelled with tourmaline, topaz agate and jade and took fifteen months to build. The motive power is a 200 pound weight, which winds itself automatically. The cost of the clock was \$5,000.

SHORT AND FUNNY.

A Recipe Given How to Make Chop Suey.
Chicago Tribune.
When his sister came home from cooking school and asked him if he had ever heard a recipe for chop suey, he didn't like to admit there was anything on earth that he did not know. He was just at that age, 84, he spared for time by asking what she wanted it for.

It seems that the cooking school teacher had given them the question to investigate for themselves. It was one for which there were many answers, but the girl who produced the best recipe was to receive a little prize of some sort. Her big brother must have found out how chop suey was made, she thought, during some of his trips to Chinatown.

The brother then smiled a wicked smile and said he would write out the best and easiest recipe for chop suey in the world. Next morning he handed her an envelope containing the information. She did not open it until her name was called in the class. Then this is what she read aloud, to the amusement of all, herself included.
"Recipe for Chop Suey—Take a fowl of nice, clean suet and then chop it."

Electron A New Metal.

Electron is the name of a new metal, lighter than the lightest hitherto known. It has been compounded in Germany, and a great future is prophesied for it, especially in the construction of airships, flying machines, and automobiles.
It has not yet been placed on the market, but the German technical review, Prometheus, describes it as a magnesium alloy which can be cast, pressed, rolled and drawn. Its specific gravity is 1.75 to 2 (that of aluminum, the next lightest metal, is from 2.7 to 3). As cast metal it has a tensile strength of 18 kilograms to the square millimeter and a ductility of 5 per cent.
After compressing processes, such as rolling or drawing, the tensile strength is raised to 35 kilograms to the square millimeter, and the ductility to 18 per cent, without any notable increase in its specific gravity. The new metal is silver white in color, and lends itself to a brilliant polish.

Dance Forbidden By Uncle Sam.

Wate World Magazine.
Fiestas of all the wild orgies of the aborigines of North America is the festa which—summarized in the fire dance of the Saboba Indians, a small tribe living close to the Sierra Madre range of mountains, which walks off the seacoast of California from the desert.
Up to last year, when the Indian bureau of the United States government finally forbade the holding of these fiestas, the Sabobas had gathered every year at the base of old Mount San Jacinto to sing, dance and gamble, and finally to throw themselves into a pit of fiery coals, roll over and over on the burning bed, and then dance with bare feet on the red hot floor of the pit.

ARMY FLAGS.
Largest is Garrison Flag, Twenty By Thirty-Six.
Manchester (N.H.) Union.
The largest design made is called No. 1, and its dimensions are thirty-six feet on the fly and nineteen feet at the hoist, but this is very rarely used. The largest flag used in the army is the garrison flag, with a thirty-six foot fly and a twenty-foot hoist, which is displayed only on holidays and important occasions.
To describe the various designs and give the different dimensions of all the flags used in our army and navy would require several columns of space. There is a considerable number of flags of various kinds that have peculiar functions to perform. The amount of bunting required for the outfit of one of our battleships
