

CURED OF CONSTIPATION

Mr. Andrews praises Dr. Morse's Indian Root Pills.

Mr. George Andrews of Halifax, N.S.

"For many years I have been troubled with chronic Constipation. This ailment never comes single-handed, and I have been a victim to the many illnesses that constipation brings in its train. Medicine after medicine I have taken in order to find relief, but one and all left me in the same hopeless condition. It seemed that nothing would expel from me the ailment that caused so much trouble, yet at last I read about these pills in Kool's Pills.

"That was indeed a lucky day for me, for I was so impressed with the statements made that I determined to give them a fair trial. They have regulated my stomach and bowels. I am cured of constipation, and I claim they have no equal as a medicine."

"For over half a century Dr. Morse's Indian Root Pills have been curing constipation and clogged, inactive kidneys, with all the ailments which result from them. They cleanse the whole system and purify the blood. Sold everywhere at 25¢ a box."

HOTEL DIRECTORY.

DESERVING TO GO TO THE STEWART HOUSE. Leading Commercial Hotel. Rates, \$1.50 per day. JAS. STEWART, Prop.

TRAVELLING.

GRAND TRUNK RAILWAY SYSTEM

INTERNATIONAL LIVE STOCK EXPOSITION, CHICAGO, ILL., Nov. 22nd to Dec. 3rd. Round Trip Fare from Kingston, \$24.25. Good going Nov. 23rd, 24th, 25th and Dec. 1st, good to return until Dec. 15th.

ONTARIO PROVINCIAL FAIR

COAL by WM. DRURY, 335 WELLINGTON STREET. Phone 443.

FRONTENAC LOAN & INVESTMENT SOCIETY.

President—Mr. Richard Cartwright. Money loaned on City and Farm Properties, Municipal and County Securities. Mortgages purchased. Deposits received and interest allowed. S. C. McQUEEN, Managing Director, 21 Clarence Street.

DEAR GERMAN FOOD

The Butchers Want All Importation Barriers Removed.

The prices of the necessities of life continue to rise in a most alarming manner in the cities of Germany, with Berlin and Hamburg at their head. German housewives are in a state of growing anxiety, asking where all this is to end. Another phase of the question is now opened up by the attitude of the butchers, who are actively petitioning the Government to "do something" if their trade is not to suffer seriously. In their petition they state that the prohibition to import cattle from abroad does not enable home farmers to cope with the national demand, for oxen, sheep, and calves is practically stationary, and in some districts is even growing less, while the demand increases. They ask for the abolition of all frontier barriers to importation of live stock, and less drastic measures in dealing with cattle supposed to be affected with tuberculosis. This, they say, is carried to absurd lengths. A curious political coloring is lent to this movement of the German butchers by the threat that if the Government declines to remove their grievances they will, as a body, join the Social Democratic organization. The butchers have hitherto been among the most loyal of the Kaiser's subjects.

THE PREACHER'S BARREL.

The interesting question of the preacher's "barrel" comes forward again in a suit for damages against a railroad by a Minnesota clergyman. The clergyman shipped his sermons—an accumulation of twenty years—and they never reached him. He wanted the railroad to pay for them. One reason named is their value to him to preach again to other congregations. If the sermons are not recovered he hopes the preacher will be able to collect—all they are worth. We should suppose the parishioners in his new charge would be willing to share with the railroad in paying the damages collected. Other churches advise their coming pastors to patronize this particular road. The preacher himself might find further compensation in observing the effect on himself of doing some original work.—Horn. Review.

WOOL IN SOUTH AFRICA.

The Exports Will Double and Amount to 800,000 Bales.

Since the conclusion of the South African war, says The Canadian Textile Journal, exports of wool from the Cape have more than doubled, and last year amounted to more than 400,000 bales. The best judges are of opinion that within a decade the exports will double again, and amount to 800,000 bales. To reach this quantity it will not be necessary to double the number of sheep pastured. The Boer has heretofore been among the most backward sheep farmers in the world, and millions of his sheep produce hardly any wool, and ought to be destroyed and replaced by well bred merinos. Owing to the wisdom of South African statesmen this is now being done on a big scale, a 1 for some years past large imports have been made, both by the government and private people, of sheep from the finest studs in Australia. From the finest studs in Australia has appointed a well-known Australian wool and sheep expert to superintend the breeding of sheep and the preparation of wool for the market.

GRAIN GROWING IN CANADA.

The Possibilities of the Western Prairies Stagger Estimation.

A statement issued by the Department of the Interior shows that out of a total area of 334,000,000 acres in the Canadian West, the surveyed area is only 145,000,000 acres. The total area homesteaded is only 44,000,000 acres, and the total area under grain crop last year was less than 12,000,000 acres. Of this, less than 7,000,000 acres produced 147,000,000 bushels of wheat. The total area cultivated is only about 3 per cent of the total land area. Yet upon this small area 147,000,000 bushels of wheat were produced. When 25 times this amount of land is cultivated and producing wheat, the output almost staggers estimation. It certainly goes to show that in the future grain-growing and milling will be the greatest of all our industries.

NEW LONG-DISTANCE PHONE.

A new type of long-distance telephone was recently tested successfully over a circuit extending from New York to Chicago, by way of Pittsburgh, and return. The distance was eighteen hundred and twenty-five miles. The system, which is the invention of Dr. Tardieu, of Ailes, France, consists in raising the pitch of the message two octaves and a third by means of a combination of drums. At this high pitch the waves are sharp and short, and can be transmitted over a greater distance than is possible with the sound waves of ordinary conversation. At the receiver the pitch is again restored to normal.—Scientific American.

WONDERFUL DOLL'S HOUSE.

An exquisite collection of miniature furniture, ornaments, china, and plate, collected by Lady Muriel Herbert, was on view at a doll's bazaar held at Lansdowne House, London. The collection was made by Lady Muriel Herbert for her model doll's house, which was opened two years ago by Queen Alexandra. The house, which is seven feet high and five feet wide, has fifteen rooms, all luxuriously decorated. One is a banquetting hall, with marble pillars. There are several pictures and objects of art of the sixteenth, seventeenth, and eighteenth centuries, a library of tiny books, the smallest measuring 3/16 in., and visitors' book an inch square containing the signatures of King Edward and Queen Alexandra.

More people would take chances if they could not take chances in one they didn't turn out right. A good foot rule—don't wear shoes that are too small.

QUEEN MARY

She Will Never Wear the Silly Extremes of Fashion.

The new Queen of England is deservedly popular, and from the moment of her debut as the Princess May of Teck she seemed to take hold of the popular imagination as being perhaps the most elegant girl in society, for, though far from blessed with a superfluity of wealth, she was possibly owing to her Austrian parentage—chic and neat in her dress. She attires herself in a style of her own and never alters the dressing of her hair. She has thus become the arch-type of the neat, carefully-groomed, tailor-made Englishwoman, while her evening gowns are made in the Court fashion and never incline to the untidy and "artistic" Queen Mary will undoubtedly lead the fashion in English dress, just as King Edward set the mode for men, not only in England, but all over the world. The silly extremes of fashion will never be worn by the new Queen, who shows innate good taste in every respect of her life. Queen Mary, it is known in inner circles, has quiet, intellectual leanings, and is especially fond of pictures, reading, music, the drama, and the intellectual side of travel. Nothing pleases her better than to slip away abroad, incognito, with a single lady-in-waiting, and to explore some interesting town. When in Prague a year or two ago, she was running about the most interesting of European capitals, quite alone, and unrecognized. The Princess of Wales had come to see the city where her ancestors, the daughter of James I, once reigned over Bohemia as Queen of Hearts.

THE FARMERS OF DENMARK.

Over 89 Per Cent. of Them Are Said to Own Their Farms.

Three things, according to Frederick Howe, in The Outlook, which made the country of Denmark unique, are peasant ownership, nearly universal co-operation, and the political supremacy of the peasant class. Denmark has a farmer Parliament, a farmer Ministry, and a farmer point of view in its legislative enactments. Over 89 per cent. of the Danish farmers are said to own their own farms, the average size of which is thirty-nine acres, and while who has paid one-tenth or more of the purchase price of a farm can borrow from the State Treasury on mortgage, at four per cent, to pay the balance. The railways are owned and conducted to pay wages and expenses. City wages are determined by the agricultural index.

Intensive cultivation and co-operative buying and selling make the Dane the best farmer in the world. The farms, says Mr. Howe, are cultivated like market gardens, the chief products of which are butter, eggs, bacon, poultry and fine stock. There are now 1,037 co-operative dairies, comprising a membership of between 90 and 95 per cent. of the farmers. These export to England nearly a million dollars of butter per week. The egg-export is valued at \$1,000,000, and millions of his sheep produce hardly any wool, and ought to be destroyed and replaced by well bred merinos. Owing to the wisdom of South African statesmen this is now being done on a big scale, a 1 for some years past large imports have been made, both by the government and private people, of sheep from the finest studs in Australia. From the finest studs in Australia has appointed a well-known Australian wool and sheep expert to superintend the breeding of sheep and the preparation of wool for the market.

TEACHING HORSES TO STAND.

They Must Be Taught to Be Absolutely Still.

A team of a single horse that will stand perfectly still until asked to move forward, is about as sure a test of the kind of a horseman the driver is as can be found. In the Canadian Farmer. How often do we see some spirited horse stamping around, backing up, and then straining on the rein, while its driver is alternately jerking at the reins, and endeavoring to get the rug around his knees, or assisting some lady perhaps, to get comfortably seated? There is a time when this matter can be remedied. It is when the horse is receiving his first lessons. He should be taught to stand absolutely still at all times, until he receives the word of command to move on. Moderately still will not do. It must be emphasized that the driver can make all preparations in comfort.

POTATO MARKET IN CUBA.

Almost half our exports of potatoes for the fiscal year ending March 31st went to Cuba, shipments to that island amounting to \$406,593 worth, representing an increase over the previous year of \$103,334. The increase in volume was much larger, but prices were, on the whole, from a third to a half lower than in former years. American buyers, enjoying, as they do, a preferential tariff in that market, made every effort to capture it, quoting lower and still lower prices. Our potato growers were offered Havana at \$1.50 per barrel, c.i.f., and finally \$1.40 per barrel. Still, with the new Cuban crop on the market, Canadian potatoes continued to arrive in undiminished quantities, and on June 24th were still holding the market to the exclusion of potatoes from all other countries.

PARLIAMENT'S WINE CELLAR.

The balance-sheet of the Kitchen Committee of the British House of Commons for last year shows that the amounts received for the refreshments of members and their guests were: Provisions, \$60,000; cigars, \$5,800; wines, \$36,000. The profit on provisions was \$7,500. In addition to the usual subsidy of \$10,000 from the Treasury, the kitchen received a supplementary grant of \$2,500 and a grant for renewals of \$3,000. The amount spent on replenishing the wine cellar was \$20,000, and \$4,000 was spent on cigars. Wages and salaries amounted to \$29,000.

A few men can undergo as severe an ordeal for themselves as all women can for other people. Ever notice how easy it is to get things you don't care for?

VIOLET ASQUITH

Her Speech to Salvation Army Cadets.

"On behalf of my father, I wish for the Salvation Army cadets that in application and strength may not fail in their efforts, and that their splendid campaign against disease and ignorance and pain may be crowned with success. With this message Miss Violet Asquith, daughter of the Prime Minister, concluded a touching and pretty speech which she made after delivering certificates in domestic hygiene to 272 Salvation Army cadets in England. Mrs. Lloyd George spoke of the necessity of good food and pure air in the making of a healthy race. As a nation we suffered from bad food and too much drink, although she understood that people were drinking less since the tax was put on whiskey. (Laughter.) Poor people did not get enough and rich people got too much good food and drink. Things were very unevenly divided, but we wanted a strong and healthy nation, and, above all, a moral and sober nation. (Hear, hear.) Sir J. D. Crichton-Browne, in his opening address, said that he believed that the great plague, tuberculosis, which was carrying off 70,000 of our people every year, and crippling and disabling 300,000, might be extinguished in less than thirty years if we would only use the means at our disposal, and these means were mainly sanitary.

"THE GIRL AND THE EAGLE"

Lights That Failed to Solve a Dark Mystery.

The mystery of "The Girl and the Eagle," a new "turn" in the programme of a London theatre, was helped to success by circumstances which obviously belonged to a scheme of different intention.

Into the darkness of the theatre there flew from the stage a green-eyed monster of an eagle, lathered in luminous paint, which held in its claws a lamb-like little lady so dead that she fell. Into the darkness of the theatre there flew from the stage a green-eyed monster of an eagle, lathered in luminous paint, which held in its claws a lamb-like little lady so dead that she fell. Into the darkness of the theatre there flew from the stage a green-eyed monster of an eagle, lathered in luminous paint, which held in its claws a lamb-like little lady so dead that she fell.

She kept her head and her heart calm and her voice in tune even while hovering over a sinister-looking device of millinery with pins sticking from it like quills upon the fretful porcupine. And she was not in the least dismayed when gentlemen in the audience began to strike matches to see how it was done. The inquisitive little flames flashed up one after another, but "The Girl and the Eagle" remained a dark secret. The eagle, however, remained an arrangement of black draperies on the stage, and when the lights of the theatre were turned on, as they were immediately, the mechanical bird had disappeared. The mystery was all the more conspicuous.

BUILDING A MONOPLANE

E. Peterson Will Construct One Like DeLesseps'.

E. Peterson, Fort William, decided to build a monoplane. The machine, with the exception of the engine, which has been ordered in Toronto, will be constructed entirely by the Fort William. The monoplane will be similar in design to the one in which Count de Lesseps made his flights at Toronto. The frame work of the body and wings will be constructed of spruce and poplar wood and will have only one sustaining surface. A 30-horsepower engine will be installed. The monoplane complete will weigh in the neighborhood of 600 pounds, and will be capable of ascending to a height of 3,000 feet, and attaining a speed of 40 miles an hour. The body of the machine will be 35 feet in length and the wings will have an expanse of 25 feet. The Fort William aerial navigator, expects to be able to sail in the air by the end of September. The monoplane will cost \$1,800.

AN AUTOMOBILE CAR

Up-to-Date Method of Inspecting Railway Work in Montreal.

Railway officials on the Lake Superior division of the Canadian Pacific railway will heretofore make their trips of inspection in an automobile car. It is the first of its kind to be operated in Fort William. It has a buggy body and a glass front with a covered top. Gasoline is the motive power, and a speed of from 50 to 60 miles an hour can be attained. It has seating capacity for eight.

WEDDING ROMANCE

A Windfall for a Veteran of the American Civil War.

Mr. Marshall Bailey, a veteran of the American Civil War, was married in Dublin to a woman of thirty-five, until recently an inmate of the South Dublin Workhouse. Mr. Bailey was born in the United States about twenty years ago, and after leaving the American Army went abroad. He had had fortune, and for some years was an inmate of the South Dublin Workhouse where he met his bride about three months ago a piece of news reached him in the workhouse which enabled him to regain his independence and marry the woman of his choice. He learned that the American Government had awarded him a substantial pension and that arrears amounting to \$1,750 were due to him. A large crowd, interested in the veteran's romance, witnessed the wedding. The bride, who is an inmate of the workhouse, was allowed out specially for the occasion. In reply to the showers of rice rained on the wedding carriage as it left the church the bridegroom threw out of the window a large quantity of silver, which was scrambled for by the crowd.

Man's reason gets him into mischief but woman's instinct keeps her out of it. Only a woman can enjoy being unhappy because she is misunderstood.

LEADERS AND LOAFERS

Lord Selborne on Brains and Muscle.

"We have too many loafers of every class in England," said Lord Selborne at Winchester College, London. "Between the rich man who does nothing himself and the tramp there is really no moral distinction, excepting that one is presumably clean and the other certainly dirty." (Laughter.) Work fell roughly into two divisions—thinking, and thinking and doing. The former was a very limited class, and a man who only thought old thoughts in worse language than was previously used was only an artistic kind of loafer. Independence of character and defiance of public opinion, he added, were in themselves good things—not that which arose from conceit or silliness of temperament, but that which came from the reasonable use of intelligence. We never got a leader of men worth having who did not as a boy defy public opinion and it was because he learnt to do that wisely and at the right time that he afterwards was not a follower but a leader. When we got the characteristics mentioned in combination with a great intellect and a first-class education we had the greatest instrument for moving the world; when, in addition, the man was an athlete we got the paragon. Of the three—muscles, brains, and character—the greatest was character.

FRUIT IN THE OKANAGAN

The Latest Reports Say That Prospects are Excellent.

It is estimated that over 500 carloads of fruit will this season be shipped from the districts surrounding Okanagan Lake, in British Columbia. From present indications, there will be over 100 carloads of peaches grown for shipping. Summerland alone estimates to ship 25 carloads of peach fruit.

The cherry crop is the best in the history of the Valley. A great number of the fruit ranches last season sowed cover crops as root protection, and this beneficial result has been demonstrated in the increased yield of the orchards that were so treated, and the estimated yield of the Valley for this season. Fruit men are gradually learning more regarding conditions that influence the crop and it is almost safe to say that such precautions are being taken as will prevent the disaster which the severe winter wrought upon the orchards in many of the valleys of British Columbia a year ago. More land in the Okanagan is being brought under irrigation, and this summer is witnessing much increased plantation. Farmers in general are quite jubilant over the expectation of having a record crop.

ONE TOO MANY

Discretion is a good thing, and Aelley, the tailor, had a heap of it. One morning Mrs. Murphy, a customer, came into the shop and found him busy with pen and paper. She asked him what he was doing. "Oh, makin' a list as the min' in this book that O'kin lick."

WRONG KIND OF COMFORT

"I'm going over to comfort Mrs. Brown," said Mrs. Jackson to her daughter Mary. "Mr. Brown hanged himself in their attic last night." "Oh, mother, don't go! You know you always say the wrong thing." "Yes, I'm going, Mary. I'll just talk about the weather. That's a safe enough subject."

BABY'S 60-FOOT FALL

A pathetic story of a baby's tragic death was told at an inquest at Westminster Coroner's Court on the body of Liddia Olga Irene Reynolds, two years old.

Mr. Reynier lives with his family at Pimlico, and the dead body of the child was found in an area near there. The child, with its parents, slept in a room on the fourth floor and it was stated that it must have got out of its cot, climbed on a chair and a writing table and out of the open window. The little girl then apparently crawled or walked along a narrow parapet past three houses and finally fell over. Inspector Reid said the child must have fallen at least 60 feet. The jury returned a verdict of accidental death.

PROOF OF CHARACTER

It's a poor person, indeed, who has nothing to boast of. Asked if she had any witnesses to her character, an Irish woman proudly replied that she didn't need them. "My character," she added, "can be proved by the books at all the police courts."

A SIMPLE QUESTION

In a jury trial last week, a lawyer, baiting a young country fellow, asked imperiously—"And what did you fill the cart with?" "With a shovel," replied the youth to the amusement of the court.

'One way to remain happily married is to cut out your relatives who are afflicted with the butt-in habit. The louder a child cries the less it is hurt.

THE NEW INTERNATIONAL ENCYCLOPEDIA SAYS. Cod Liver Oil is one of the most valuable therapeutic agents, that the benefit derived from it in diseases associated with loss of flesh cannot be over-estimated. It is given in TUBERCULOSIS, in RICKETS, in CHRONIC ECZEMA, in many NERVOUS DISEASES and in GENERAL FEEBLENESS.
