Theory of Telescope Simple.

Louisville Courier-Journal. People sometimes wonder why telescope has two glasses, one at the big end and one at the little end, and they want to know the difference. The glass at the big end is to gather light. It is simply a big eye. If it is an hun dred times bigger than the eye in your head it will gather an hundred times more light. It gathers the rays of light coming from a star and blends them all into a common meeting point, called a focus, which is a picture of the star with your naked eye ly; Mrs. Hayes at F. Cox's; Miss if you like. But you can see it better Bessie at E. Uens'; Edward Godfrey, and examine it more closely if you look at it with a small magnifying glass. And this is the glass at the small end of the telescope. It magnifies the picture made by the big glass at the other end of the instrument. All telescopes are built on this prin-
