Argue it Pro and Con

THE cost of heating your home must be reckoned, not by the price originally paid for the heating system you install, but on the basis of actual results. It is not the price that is important—it is the reason for the price. It is what the system proves in actual service that should determine its value and suitability. On this basis an unprejudiced and careful examination of the facts will clearly show that for even, healthful and economical warmth, hot water heating as supplied by

King Boilers and Radiators

far surpasses any other method for the modern home. True, it costs more at first, but the difference in price only faintly indicates the wide difference in results. Consider even fuel consumption. In ten to fifteen years the waste caused by old fashioned heating methods would easily pay the first cost and upkeep of a King Boiler and King Radiators, not to mention the added comfort you have enjoyed. With a King hot water heating equipment your home is cleanly and uniformly warmed, and the heat is always under your control. A simple turn of the valve being all that is necessary to regulate the temperature to any desired degree. The heat supplied is pure and hygienic, and contains just the right amount of moisture, free from all trace or taint of coal-gas, ash-dust or other harmful influences. For these reasons a King Boiler and King Radiators provide the safest and most permanent investment you can make toward the creation of a bright, cheery home—with all that implies in ideal living conditions.
