

A Wholesome Food For Growing Children

A regular, plentiful diet of Kellogg's Toasted Corn Flakes makes children strong and healthy—capable and willing for study and play. Serve it to your children at meal time and after school.

Kellogg's Toasted Corn Flakes is an ideal food that builds up the body without burdening the digestive organs.

Look for the name on the package.

Kellogg's TOASTED CORN FLAKES

"Salvador" BEER

THE FAMOUS NATIONAL DRINK

There's a story behind "Salvador" beer—Canada's most famous brew—that carries us back to the year 1651

The Grand Duke Ferdinand, the Bavarian monarch of that period, established the famous cloister brewery, where he secured the secret formula and process for brewing "Salvador." He has the sole right under the Canadian Government Copyright and Letters Patent to manufacture this famous brew. Reinhardt's "Salvador" has become "The National Drink" by a rigorous adherence to every detail of the original process devised by Father Sale in 1651. Compared with all other beers, "Salvador" beer is worth a dollar a drop, yet it costs no more than just ordinary beer. Every pint of "Salvador" is brewed in wood for at least six months before bottling. "Salvador" is not only a pure, sparkling and refreshing beer; it also possesses tonic qualities which make it the beer par excellence for family use.

Mr. Lothar Reinhardt completed his extensive studies of German brewing in this famous cloister brewery, where he secured the secret formula and process for brewing "Salvador." He has the sole right under the Canadian Government Copyright and Letters Patent to manufacture this famous brew. Reinhardt's "Salvador" has become "The National Drink" by a rigorous adherence to every detail of the original process devised by Father Sale in 1651. Compared with all other beers, "Salvador" beer is worth a dollar a drop, yet it costs no more than just ordinary beer. Every pint of "Salvador" is brewed in wood for at least six months before bottling. "Salvador" is not only a pure, sparkling and refreshing beer; it also possesses tonic qualities which make it the beer par excellence for family use.

Always order "Salvador" if you want the best beer brewed.

CHURCH OF FUTURE

A POWERFUL PLEA FOR CHURCH UNITY.

Economically Ridiculous to Have 142 Different Sects in United States—So Says Dr. Thomas E. Green.

In an article headed "What is to become of the preacher?" in the August Hampton's Magazine, Dr. Thomas E. Green, long noted as a preacher in the middle west and now a public lecturer, makes a strong plea for the union of churches. He says: "Outside of various independent congregations, there are in the United States a hundred and forty-two different sects and sorts large enough to maintain a definite organization. It is questionable whether the average reader has ever given a serious thought to the reason why there are so many religious denominations—why, to use the ordinary phrase, there are so many different churches in the town in which he lives? Were it anything else he would brand it at once as foolishness, as suicidal. At least the same plan in education, in business or in politics and it would be self-evidently absurd. Judged by any standard of practical efficiency the religious condition of the average town would be ridiculous were it not so pitiful.

There are in the United States fourteen kinds of Baptists; twenty-four sorts of Lutherans; fifteen types of Methodists; twelve subdivisions of Presbyterians. Between the minor divisions the differences are often in themselves, their beginnings so long ago that they have been absolutely forgotten. Once begun they continue, not because the issues of whose discussion they are the monuments still exist, or have any earthly value, but because no one has the courage to challenge their value or usefulness, or reverently to lay them away among the other relics of antiquity.

"In a town near the border of Manitoba there is a Southern Methodist church; its very name a relic of the civil war, and on the Gulf of Mexico an anemic, starving, Northern Presbyterian congregation is struggling to keep itself alive.

"Between the great denominations there is originally temperamental differences of expression and of worship, depending largely upon the root stock upon which they grew. English, Scotch, Dutch, Saxon and Latin peoples naturally differed in many traits of character. These beginnings are long past. With a more unique and unrepresented capacity for assimilation, an ethnic digestion that is one of the wonders of the world's life, we have made a composite temperament in which the best and the most virile from every whither have gathered, and the weaker and local peculiarities have sloughed away.

"To one will dispute the fact for which Pittarch contended, that religion—a religion—is necessary for the well-being of humanity. No one will dispute the fact that from at least our viewpoint Christianity is the highest in ideal and accomplishment of all the world religions. No one will dispute the fact, apparent on every hand, that the present condition of organized American Christianity is neither satisfactory nor promising.

"The people of America are still a Christian people. When Christianity expresses itself through a church which answers the people's needs, they will support that church, just as at present they support foreign missions, social settlements, hospitals, humane institutions of every kind. They are waiting for the church of the future. Whatever that church will be, it will eliminate the narrowness of denominationalism.

"The people are waiting for church unity, but not as the term is generally used. No one will venture for a moment to believe, what was once the inspiration during generations of doctrinal discussion and dogmatic warfare, that any one of existing denominations will be the ultimate form to which all others will come. That kind of church unity long indulged in by visionary enthusiasts, is merely an 'iridescent dream.' The practical proposition is a combination by elimination, the seeking of a common road, framed by the fundamental syllables of common belief.

"Already farseeing leadership is realising the necessity of combination. The many sorts of Methodists are reaching out to a greater Methodism; Presbyterians, Lutherans, Baptists are beginning to learn wisdom from 'the children of this world.'

"At a recent general convention of the Protestant Episcopal church a commission was created to enter the religious world at large and attempt a corporate union of the religious forces in America, and behind its prospective work one layman placed a fund of one hundred thousand dollars to insure its unhampered activity. The difficulty will lie not among the leaders along various lines of denominational activity, but in the prejudices and antipathies of the masses of people who are loyal to traditions and to issues long since buried in the flight of years."

Thanks to Beauty Parlors.

Lady Duff-Gordon, at a dinner in New York, praised the beauty parlor. "It has put back the clock at least fifteen years for woman," she said. "The woman of fifty today, thanks to the beauty parlor, hardly looks thirty-five. In fact, I might almost say that there are no old women any more."

A Poor Cure.

Mayor Speer, of Denver, at a recent temperance banquet, was discussing a drink cure of little efficacy. "When I think of this cure," he said, "I recall a poor old woman with a red nose who entered a magistrate's office and said: 'I've drunk a glass of beer, and I feel better.' 'I'd like to take the pledge, if ye please.' 'Very good,' said the polite clerk. 'And how long did you wish to take it for?' 'In the past,' said the old woman, 'I've always took it for life.'"

WELDING TORTOISE SHELL.

Methods by Which Plates Are Made Into Solid Piece.

Tortoise shell is the carapace or horny armor which protects the back of the Hawksbill turtle. This armor is composed of thirteen segments or plates, which are not fast at the outer edges, but overlap one another like the tiles on a roof.

The turtles are captured when they come on shore to lay their eggs, and after being killed are immersed in boiling water until the plates can be removed without injury. Formerly, in some places, live turtles were roasted until the plates loosened and could be taken away, when the turtle was put back in the sea to grow a new shell. It is doubtful if shells grow again, or if they would be of much value.

Hawksbill turtles are found in most of the tropical seas, and the shells are commercially rated as the Indian and West Indian. The East Indian shell is much darker than the other and has fewer of the transparent markings that go to make tortoise shell desirable, and it is not so valuable as the West Indian shell on that account.

The plates vary in size and thickness according to location, but in all cases taper to a thin edge where they overlap. In those cases in which a large piece is required to be of uniform thickness two or more plates are laid together and welded until they become a solid piece of necessary thickness.

In welding plates they are first boiled in a salt solution until they become comparatively soft and pliable, when they are carefully cleaned to remove all foreign matter from the surfaces to be welded. The slightest impurity will prevent the shells from forming a perfect joint.

After the parts have been laid together they are strapped with several thicknesses of wet cloth and an iron plate put on each side. These plates must be parallel so the pressure on the shell shall be equally distributed and bits of folded cloth are laid in wherever required to make the pressure uniform.

In the meantime heavy iron tongs have been heating and when hot enough to brown a bit of paper are made to hold the package of shell and cloths and the whole is put in a heavy press. Pressure is increased gradually to a certain point and maintained until the tongs become cold, when the parts will be found to have united to form one piece. Unless carefully handled the shells separate in being put in hot water.

Small objects cannot be repaired by welding, as a rule, because the surfaces are too small to knit properly and because pressure sufficient to unite the parts might destroy patterns or shape.—Optical Journal and Review.

A Terrible Record.

As every mother knows the death rate of little ones in Canada during the hot summer months far exceeds that of any other season of the year. The reason for this is that the excessive heat brings on those dreaded troubles, cholera infantum, diarrhoea, dysentery and other stomach and bowel complaints. These come on so quickly and with such little warning that often baby is beyond help before the mother realizes it is ill. During the hot summer months the mother must be continually on her guard to see that baby's bowels are working regularly and his little stomach is kept sweet and pure. Baby's Own Tablets should always be kept in the home as they are the mother's greatest friends. A dose now and then will prevent these troubles, or if they do come on suddenly they will be quickly banished by the Tablets. The Tablets are sold by medicine-dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Queen Befriends Poor.

The queen of Bulgaria is a sympathetic and affectionate wife to King Ferdinand, but she is not a politician and does not share in his ambitions for the development of his country. The queen, who has been a second mother to the king's children by his first wife, has given time to the alleviation of the condition of the poor and suffering. She has started nursing schools and charitable institutions. In fact, when she went to Bulgaria as a bride she was a trained nurse, but she found no woman among the members of the nobility who could give first aid in the event of an accident. The queen found conditions worse in other classes, and was stirred to start a school where women could get training in the rudiments of nursing. In the institution she is called Sister Eleonore.

Not a Latinist.

Takashi Komatsu, at one of the dinners of the recent Harvard commencement in Cambridge, praised the study of Latin. "Latin is often useful socially," he said. "I once attended a dance in Boston. A beautiful young debutante surrounded by a half dozen Harvard undergraduates, listened intently to a story about a football squabble. 'And the cause belli?' she asked. 'Thereupon her mother, with a shocked look, exclaimed: 'My dear, how often have I told you always to say stomach?'"

Hay's Hair Health

Restores color to Gray or Faded hair—Removes Dandruff and invigorates the Scalp—Promotes a luxuriant, healthy hair growth—Stops its falling out. Is not a dye.

21.00 and 50c. at Drug Stores or direct upon receipt of price and dealer's name. Send 10c. for sample bottle. Write Hay's Hair Health Co., Newark, N. J., U. S. A.

Hay's Hair Health Soap is recommended for Shampooing the hair and keeping the scalp clean and healthy, also for red, rough chapped hands and feet. 25c. at Drug Stores.

REFUSE ALL SUBSTITUTES.

JAS. B. McLEOD, AGENT

BABIES WHO PUZZLE DOCTORS.

Are Able to See Through Opaque Objects.

It is questionable whether the varieties of nature have been more strikingly shown than in the case of James Adolph Cady, two years and three months old, the son of normal-sized parents living at Mount Airy, Georgia. James eats as much as both father and mother together and at the present time weighs eight and a half stones. He measures fourteen inches round the neck, thirty-six inches above the knee and thirteen inches below. He is very agile and strong enough to knock down children three years his age. Young James is constantly crying for food, and the amount of solids he consumes in the course of a day would be sufficient for six boys of his age. For breakfast he eats numerous biscuits spread with butter and syrup, and drinks two glasses of milk, as well as a couple of cups of coffee. For dinner and supper he is supplied with a large plate of boiled bacon and vegetables, and he gives full vent to a lusty pair of lungs if he is not given light refreshments between meals.

A year or two ago doctors in this country were much puzzled over a six-year-old boy named Arthur Keene, living with his parents at Penarth, Glamorgan. Young Arthur had lived on milk since his birth, not a particle of solid food being taken. At six years of age he was finally developed and healthy, and his diet per week consisted of thirty pints of milk mixed with sugar and a little water.

When Lionel Brett, a young boy of Massachusetts, was a baby in arms, says Dr. Ferroul, of Narbonne, and Dr. Grassot of Montpellier some years back examined a young girl of Narbonne and she was found to possess eyes similar to those of Lionel Brett. Experiments proved that she could see through opaque bodies as clearly and penetratingly as her eyes generated Röntgen rays.

Another child possessed of wonderful sight was a German lad named Schaefer, who created a future in scientific circles some time ago. There was nothing unusual in his appearance and yet he had a very strange pair of eyes. The usual order of things was reversed; in the day he was practically blind, while in the darkness of night the keenness of his sight was astonishing. When night came on young Schaefer could see with an accuracy which many ordinary people would have given much to possess even in the daytime. He could enter a pitch-dark room and pick up any small object from the table or floor with as much ease as his parents could if the room were lit with light. On one occasion Mr. and Mrs. Schaefer sprinkled the floor of a room with tiny pins, and at night they ordered their son to pick them up. Although the room was absolutely dark the lad found every one of the pins in an incredibly short space of time.

People with magnetic bodies are not unknown, and six years ago doctors discovered at Vladikavkaz, in the Caucasus, a girl of twelve whose body was practically a magnet. According to a medico who examined her, every object which she approached would move. Once she walked close to a kitchen dresser, and in an instant the crockery upon it began to dance. On another occasion a heavy bottle standing upon a table was raised in the air when the magnetic maiden went near it.

Dead Sure.

Representative Swager, Shelby, of Kentucky, was talking in Washington about his amendment to strengthen the pure food and drugs bill. "We must make our laws against impure food and drugs unbreakable," he said, "or a national state of ill health will be ours as certainly as ill health is ours."

Not Impressed.

Mrs. Nordica, at a garden party at Deal Beach, said, apropos of her recent European tour: "Many good people refuse to be impressed by the armless and legless fragments of antique sculpture treasured in the museums of the old world." "One day in the British Museum a guide was recounting to a little knot of tourists the glories of a battered centaur, when a Chicago meat salesman broke the reverent hush with the question: "Excuse me, sir, but what would they feed a centaur like that on—ham and eggs, or hay?"

Every woman imagines she would have a stylish figure if she could only afford to dress as she would like to. Australia and Argentina lead the world in the number of horses and cattle.

NEAVE'S FOOD FOR INFANTS

Is the RIGHT FOOD for YOUR baby

The strongest argument for your using NEAVE'S FOOD for your baby, is that 30 years experience has proved its value for the youngest and most delicate infant. NEAVE'S FOOD contains all the essentials for flesh and bone-forming in an exceptional degree—assists teething—relieves constipation—and makes baby thrive. Here's what one mother says:

"My baby has been brought up on Neave's Food, of which I cannot speak too highly. My baby did not thrive until I gave him Neave's Food, and he has never had a day's illness since. If anyone asks me what they shall give their babies, I say Neave's Food, and they get on just the same as mine, and thank me for telling them." Mrs. Savery of Bristol.

Sold in 1 lb. airtight tins by all Druggists in Canada.

FREE TO MOTHERS—write today for free tin of Neave's Food and book "Hints About Baby." Address to: Canadian Agent: **LEWIS LITTLE** Mrs. J. E. NEAVE & CO., 25 St. Paul St., TORONTO, ENGLAND.
