

"I was Crippled, could hardly walk and had to crawl down stairs at times on my hands and knees. My doctor told me I had an acute attack of inflammatory rheumatism. I was in the hospital for weeks, but was scarcely able to walk when I left it. I read about Dr. Miles' Nervine."

bought a bottle and began to get better from the start, and for the past six months I have had scarcely any pain and am able to walk as easily as ever." J.H. SANDERS, P. O. box 5, Rockaway, N. J.

Few medicines are of any benefit for rheumatism, but Mr. Sanders tells plainly what Dr. Miles' Restorative Nervine did for him. One ounce of salicylate of soda added to one bottle of Nervine makes an excellent remedy for rheumatism, which is now known to be a nervous disease and therefore subject to the influence of a medicine that acts through the nerves, as does Dr. Miles' Nervine.

Sufferers from rheumatism seldom fail to find relief in the use of Dr. Miles' Nervine, with salicylate of soda.

Sold under a guarantee that assures the return of the price of the first bottle if it fails to benefit. At all Drugists. MILES MEDICAL CO., Toronto, Can.

## Tips For the Farmer

BY LITTLE JOSH.

### Feeding Hens.

Feeding plays a very important part in the production of winter eggs. To insure the most satisfactory results the foods must be varied in accordance with the seasons, states a writer in Farm and Home. What may be a admirable food for use during the summer is quite unfit when the weather is cold, while a suitable winter ration may not only be unsatisfactory, but may be positively dangerous during the summer. Laying hens during the winter should receive warm mash in the morning, consisting of meal, in the afternoon hard grain should be supplied. After the long fast of the night an easily-digested food is required, and thus mash is recommended for the opposite reason; grain solvated at night. On no account must cold mash be given, since this reduces the bodily temperature greatly; rather than supply cold mash I would recommend hard grain for breakfast. A suitable ration for use during the winter months consists of two parts barley meal, one part middlings, and during very severe weather half a part maize meal, together with any household scraps there may happen to be. If there are no household scraps, half a part of lean or granulated meat should be substituted. Wheat and barley are the most suitable grains. In afternoon feeding fowls in confinement should be supplied with some green food, for without it they are unlikely to remain healthy. Cabbage leaves, the tops of Brussels sprouts, and lettuce leaves are all suitable. Natural foods, such as worms, grubs, etc., are a valuable addition to the daily menu and assist egg-production very materially. Upon a soil rich in animal and vegetable life healthy and vigorous birds are able almost to support themselves at any rate, they can do with much less artificial food, thus reducing the food bill very considerably.

**With the Live Stock.**  
Never whip a horse when he shies. It increases his fear. In fitting horses for hard work increase the grain ration, but not the hay. Horses are very fond of a variety, and fussing always pays in the better condition and greater usefulness of the horse. The sheep know their master's voice—there is no doubt about that; but it is more important to know what they do when they hear it whether they flee in fear or come with expectancy. Sheep, like other animals, are creatures of habit, and should always be handled by the same attendant, who should move among them gently and give notice of his approach by speaking to the flock.

Take care that none of the soapy water from the house gets into the milk fed the hogs. Almost sure to cause bowel trouble. Grained oats, wheat bran and a little oil-cake together with some alfalfa or clover hay, will keep the blood sows from becoming feverish. If a young pig becomes chilled, take it to the house and plunge it in warm water (as hot as you can bear your hand) several times, and then wrap in warm blanket and put it in a warm place.

Don't let the cows out in the storms to graze. It doesn't pay. It is best to reduce the milk producing food, so that a mature cow will dry and rest for a month to six weeks before calving.

The first milk of this cow is of a peculiar character called colostrum—acting as a purgative, and this puts the bowels of the young calf in perfect working condition.

### Gumption on the Farm.

When some fellow wants to let you in on the ground floor, look out! The ground floor is where the suckers are ground floor.

Don't "flare up" like a badly trimmed lamp. The man who keeps cool always has the better of the argument.

One of the biggest mistakes farmers make is in scimping themselves on the amount of grass seed sown to the acre. Of late years seed has been high, and the tendency has been to sow less than was needed to bring a good crop. Better save somewhere else. The farmer has one thing in his favor—what he knows he knows. There is no chance for a bluff in telling the soil. Everything shows right up for just what it is worth. If he is a success he can not hide the fact, and if he is a failure, the neighbors are quick to know the particulars.

Before planting any large quantity of small grain, grass or clover seed, send a sample to your state experiment station for examination. The seeds of many noxious plants are to be found in impure and unreliable seeds. It is far easier to do this than to eradicate some pestiferous weed.

## Nerves at High Tension

Necessary in This Age of Keen Competition and Great Accomplishment

When the Body Fails to Support the Brain Seek the Help of

## Dr. Chase's Nerve Food

Nervous people are the salt of the earth. The great men and great women are usually those of nervous temperament.

It takes an enormous quantity of food to supply energy to the great brain or a highly tensioned nervous system.

Digestion fails because nerve force is failing to control the low-grade functions. A little extra exertion is followed by the agony of a sleepless night. You are easily irritated and lose patience, you lack the reserve force which is necessary for success and to ward off disease. Unfortunately nervous diseases do not right themselves, and since your digestive system fails to supply sufficient nourishment you must seek external assistance such as Dr. Chase's Nerve Food.

This great food cure is not a narcotic to deaden the nerves. It is not a stimulant to whip up the nerves to renewed effort.

Dr. Chase's Nerve Food feeds the failed, wasted nerves back to health and vigor. It floods the nervous system with new rich blood, the only substance from which nerve force can be made. Fifty cents a box, 6 for \$2.50, at dealers, or Edmundson, Bates & Co., Limited, Toronto.

We are going to offer for sale 50 pairs Women's Dongola Kid Patent Leather Gau Metal Lace-up shoes, same in British All regular \$2.50.

H. Jennings, - King St.

kept pretty closely confined to the yards for the most part, and there is usually some pig straw stuck about around which they have beds for purposes of warmth and for picking up. There is no connection with Farm, Stockland and Home, to their knowledge, as they can find where there is a very great objection to this burrowing into the stack and getting their houses all full of chaff.

Small pigs is a pretty undesirable article. The manufacturer can use it only after considerable effort and time has been spent in tanning and carbonizing it, and even then he cannot use it in the manufacture of the finest woolens.

For these reasons, he can afford to pay a good price for it, as it only costs a few dollars.

A large part of the profit in poultry keeping depends on the marketing of the products. The poultryman must be a good salesman as well as a good hand at rearing the young stock. He must be a bandler and always on the lookout for good markets and better prices. He must endeavor to produce a high-grade article that few furnish and everybody wants, and, having produced it, he must know how to market it wisely. The man who makes the best profit is he who can command a few cents above the general market price because he has the goods and can get them on the market in season.

**With the Live Stock.**  
Never whip a horse when he shies. It increases his fear.

In fitting horses for hard work increase the grain ration, but not the hay.

Horses are very fond of a variety, and fussing always pays in the better condition and greater usefulness of the horse.

The sheep know their master's voice—there is no doubt about that; but it is more important to know what they do when they hear it whether they flee in fear or come with expectancy.

Sheep, like other animals, are creatures of habit, and should always be handled by the same attendant, who should move among them gently and give notice of his approach by speaking to the flock.

The result of an enquiry made by the United States department of agriculture shows that the average amount of wheat sown to the acre in the United States is 1.28 bushels, and of oats 2.29 bushels. The amount of wheat sown to the acre varies from less than ninetenths of a bushel in New Mexico, to two bushels in Vermont and Maine. The amount of oats sown to the acre varies from 1.33 in Maryland to three and a quarter bushels in Maine.

One English speaking farmer kept seventy head of milk cows on forty acres of land. The average crop was 1.28 bushels, and the average yield was 1.23 bushels. The amount of wheat sown to the acre varies from less than ninetenths of a bushel in New Mexico, to two bushels in Vermont and Maine. The amount of oats sown to the acre varies from 1.33 in Maryland to three and a quarter bushels in Maine.

During the year ending March 31st last we exported potatoes to the United States to the value of \$306,263,

the chief characteristic of this crop is a purgative, and this puts the bowels of the young calf in perfect working condition.

**Produce and Prices.**

Kingston, Feb. 10.—The market clerk reports the prices prevailing as follows:

Carrots, 10c. and 15c. a pack potato, \$1.40 and \$1.50 per bag; beans, 5c. a lb.; cabbage, 6c. per dozen; celery, 7c. onions, 8c. per bunch; radishes, 5c. a bunch; lettuce, 5c. per bunch; apples, 25c. peck; turnips, 10c.

## This Coffee Pot FREE

Why Dalton's French Drip Coffee is so Wholesome, Delicious and Economical

When you have once tasted Dalton's delicious French Drip Coffee, made in a Coffee again.

The Coffee berry, or bean, is protected by nature from the insect world by a tough outer shell or husk which contains tannin and other acids, bitter principles which are poisonous to insects and certainly not wholesome to the human system.

Other roasters of Coffee do not remove this bitter husk, and this is why many people find that ordinary Coffee does not agree with them. Not only that, but the usual way of roasting Coffee in cylinders over coke or gas fires, drives off the volatile essences, so essential to aroma and flavor.

The DALTON way is to throw the Coffee berries against an intensely hot flame. This roasts them in half the time and prevents the volatile essences being driven off. Then the Coffee is cooled by a special process, during which a strong suction airblast blows off all foreign substances.

Next comes the grinding, during which another powerful airblast removes the poisonous, bitter outer shell. The Coffee contains absolutely no chlorophyll and is packed in sealed tins, which preserve all the delightful flavor.

We make Dalton's French Drip Coffee in two strengths Mild Blend and Strong Blend. You cannot tell however which you will like

9 DALTON BROS., TORONTO.
