A Mechanical Cypher System. A Russian naval officer has inventd an electrical automatic writer f a cryptic cipher and its complenent an automatic reader of the ipher. He recently gave an exhibion before the czar and czarina on poard the imperial yacht, Standart. was when writing despatches as naval attache in Rome, and for M Muravieff, the Russian minister for 'oreign affairs, that he first got his dea. He was constantly finding erors and ambiguities in the different codes used and, consequently, he letermined to devise a code on a nathematical basis which should be wer renewable - each succeeding nessage being written by a code aid, he succeded in doing. He hen set to work to produce a nachine which should, metaphorially speaking, hold the secret of the invention locked in his breast. "inally, with the help of two skilld French watch makers, he proluced a machine suitable for his purpose and after a few months' urther labor, a presentable example of this instrument was prought before the Russian miniser of foreign affairs. It is undertood that each pair of machines has a different cipher, and that each ipher is almost, if not quite imossible to translate without the ud of the complementary machine.

Don't Grow "Fussy." itte things like the angle at which chair is placed? I have known a poor, tired woman to move a chair lownstairs, in and out of every room, ip a certain length, so that it would ook nice from the outside. Of course, such a woman is too tired to go out vhen afternoon comes. Another wonan is perfectly miserable if she finds firt in the house and miserable, if she foes not find some; they are never so rappy as when doing foolish things and never contented unless finding
