The First Step

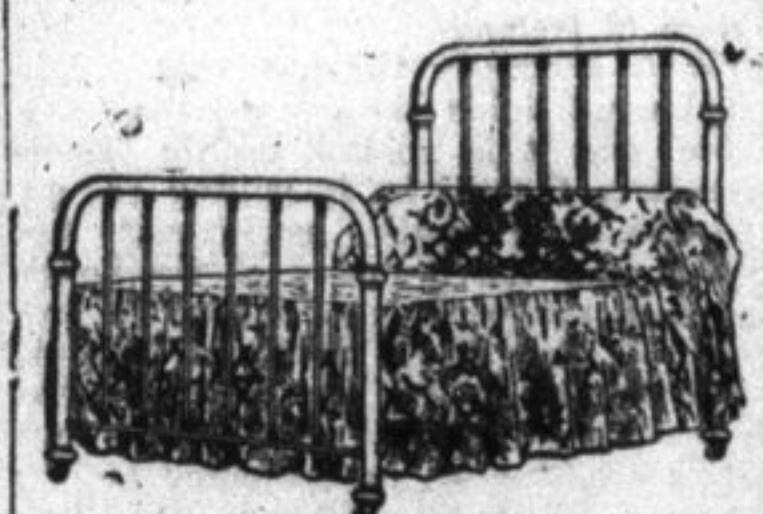

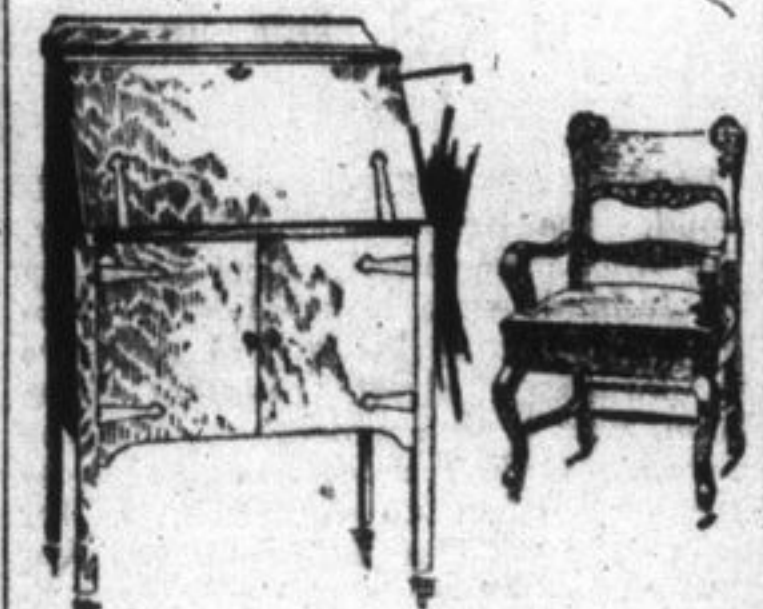

In buying eyeglasses is to call upon a registered optometrist. The next step of no less importance is to have his prescription filled by a competent optician. Years ago this meant two costs and a division of responsibility. To-day in our office both branches of this service are united under one roof, enabling us to guarantee dependable glasses for just one charge—that of the glasses. \$2, \$3, \$5 per pair.

COAL!

The kind you are looking is the kind we sell. Scranton Coal is good coal and we guarantee prompt delivery. Booth & Co. foot of West Street

WATER MAIN CAPACITY

MUST BE INCREASED, SAYS THE GENERAL MANAGER.

C. C. Folger Submitted His Report on the Waterworks Distribution System to Utilities Commission on Monday.

In accordance with the request of the Utilities Commission that the manager prepare a detailed plan and report of the water works distribution system, showing number and sizes of mains, list and location of hydrants, also dead ends, locations, etc., C. C. Folger submitted a long statement at the meeting on Monday afternoon.

The report was sub-divided into sections:

Clause "A"—Showing a plan of the city of Kingston, corrected to Dec. 31st, 1913, showing the water works distribution system complete as to number and sizes of mains, hydrants, valves, etc.

Clause "B"—Being data covering the dead ends, classified under the headings of "Controllable" and "Uncontrollable," in some cases it being absolutely necessary to complete the circuit on streets leading to the water, and in some others, in the upper and outlying portions of the city, the distance at the present time being too great to consider.

Clause "C"—New Trunk Feeder.—The question of increasing the main supply and the immediate necessity of relieving the present 16-inch main by the installation of a new 18-inch trunk feeder. This would strengthen the entire surrounding and intermediate points and furnish the most desired results, namely, to get the water away from the pumps faster, furnish a better fire supply, and relieve the strain from the present feeder, in the business section of the town.

The report continued:

As it is at the present time, if an interruption occurs to the large pipe communication to the tank and the surrounding smaller mains, it immediately discontinued, and special care must be exercised at the pumping plant in order that no undue strain is put on the smaller and weaker mains.

That increased additional main capacity is immediately necessary is established. The only point at difference is as regards the territory to be covered, so that we can provide for our immediate needs as regards increased capacity, and at the same time provide for future requirements in the newly populated areas, both as to domestic and general fire purposes. On arriving at this point, two proposals are submitted in detail, as follows:

Two Proposals

No. 1.—Pick up the present sixteen-inch water main at the junction of Union and Ontario streets, installing an eighteen-inch cast iron main from this point, up Union to the corner of Bagot and West, and along Clergy to Brock, tying in with the present sixteen-inch main at this point. In connection with this main it will also be necessary to extend the pipe from the corner of Wellington and West streets, and couple in with the proposed new feeder at the corner of Bagot and West streets.

By the above extension the old six-inch pipe on Union street would be replaced, also the dead ends on Clergy street would be done away with, and this entire section strengthened.

The entire extent to be of eighteen-inch cast iron pipe, representing a total distance of 3,225 feet, at an approximate expenditure of \$23,638.56.

No. 2.—Pick up the present sixteen-inch main at the corner of Union and Ontario streets, and continue up Union to the corner of Bagot and West, also, as before, extend the uncompleted portion of the fourteen-inch main on West street to the corner of Bagot and West, forming a Y at this point. From the corner of Bagot and West proceed in straight line, through the cricket field to the corner of Union and Barrie streets, tying in to the present main at this point. Proceed out Union street to University avenue, extend up University avenue from Union to Princess, tying in with the sixteen-inch main at this section.

By this extension the old six-inch pipe on Union street will be done away with, the dead ends will be coupled up on West and Bagot streets, and the uncasted Kingston foundry pipe, now installed on Union street, would be replaced.

This section represents a total distance of 5,725 feet, at an approximate expenditure of \$13,986.30.

Streets For Paving

Clause "D"—List of streets proposed to be paved for 1914, per the city engineer. In presenting this list, the distance of mains required to be renewed, also the approximate expense incurred in connection with the re-erecting will be covered by proposed 13 you will note on looking over this list that the sections covered by this clause, have an indirect bearing on the preceding one.

Barrie street, from Princess to York. This section at the present time is supplied with six inches and seven inches cast iron main, forming a complete circuit and fed from the sixteen-inch main on Princess street. This section is satisfactory, and, at the present time ready for paving.

Clergy street, from Barrie to Ordinance—From Barrie to Earl there is no main, and, at the present time, there is no necessity for installing one. From Earl to William, is supplied with a six inch cast iron main, complete circuit. From William to Johnson is supplied with a six inch cast iron main, satisfactory continuous circuit. From Johnson to Brock, no main. This territory will be covered by proposed 18 inch feeder, and tied in at the corner of Clergy and Brock streets, with the present sixteen inch main. From Brock to Princess, is covered by the main sixteen inch feeder. From Princess to Queen, is supplied with four inch and six inch dead ends, the six inch to be continued to Queen street, at an approximate distance of 200 feet. From Queen towards Colborne, Wipe out the 1 1/2 inch pipe and install six inch cast iron. Clergy street, from Colborne to Ordinance, is at the present supplied by

two inch. This section should be increased to six inch. In fact for the above territory, it would be advisable to replace the dead ends, by installing a six inch main from the corner of Princess and Clergy, and continue right over Clergy to Frontenac Park. This would strengthen the entire system, and wipe out the various dead ends. This distance represents 900 feet at an approximate cost of \$1,590.

Earl street, from King to Bagot—It will be necessary to cut out a short section of the old main and connect these old services to the main six inch pipe.

Earl street, from Barrie to Victoria—To complete this section it will be necessary to wipe out the dead ends near Collingwood street, and continue the six inch pipe to Victoria. In this section, above Collingwood, it would not be advisable to extend the main, because provision had not been made for sewers, water and gas connections.

Gore street, from King to Bagot—This section is supplied with a six inch main to Wellington street, and a six inch main to Bagot street. These mains are satisfactory.

Johnson street, from Wellington to Bagot—It will be necessary to install a six inch cast iron main off the main sixteen inch feeder at the corner of Wellington and William streets, and continue on to Bagot joining in at this point, a distance of 425 feet, at an approximate cost of \$720.

University avenue, from Stuart to Princess—From Stuart to Union the sewer water and gas are under the sidewalk, and from present indications the demand will not be any greater for supply than it is at the present time, in view of the land being all taken up in this section.

From Union to Earl street, is supplied with a six inch cast iron main. From Earl to Brock is four inch cast iron main, and from Brock to Princess, six inch cast iron. This pipe has been in the ground several years, and the renewal of same would depend upon what action the Commission took in connection with the installing of a main eighteen inch feeder.

West street, from King to Bagot—This section represents part of the territory outlined in the extension under clause "B" covering the installation of a new eighteen inch feeder. At the present time it is supplied with an uncasted six inch cast iron pipe which would be advisable to remove.

West street, from King to Bagot street—From King to Wellington street there is a fourteen inch cast iron main, and from Wellington to Bagot is seven inch and before paving it would be advisable to replace this seven inch with a new eighteen inch cast iron main to the corner of Bagot making provision for joining this main with the proposed new extension to Union street.

William street, from King to Bagot street—There are two dead ends in this section, and it would be advisable to entirely renew this street, with a six inch cast iron feeder for a total distance of 900 feet, at an approximate cost of \$1380.

BROKE THROUGH THE ICE

E. D. Farmer Saved Intoxicated Man From Death.

But for the prompt action of E. D. Farmer, 31 Johnson street, night watchman for S. Anglin & Company, Joseph Cole might have lost his life, on Monday evening when he fell through the ice at Anglin's Bay, about 8.30 o'clock a noise was heard by the foreman, which sounded very much as though some person had broken through the ice and was trying to get out. Without hesitation, Mr. Farmer ran to the place where he knew the ice to be very weak. Upon his arrival he saw the head and shoulders of a man who was struggling to make a landing. Mr. Farmer got down on the ice and was able to pull Cole out of the icy waters. At the point where Cole broke through, the ice was very weak on account of the exhaust pipe from the boiler room at the factory being in that vicinity.

Cole was somewhat under the influence of liquor at the time and Constables Naylor and Bateson took him to the police station where he spent the night.

Stage Driver Dying

A Hagerman, Odessa stage driver, is not likely to live. Mr. Hagerman will be remembered was one of the two stagemen who managed to reach the city on that stormy day two weeks ago by attaching an extra team of horses to his stage, one ahead of the other. Going out this same afternoon he contracted a heavy cold which developed into typhoid pneumonia. The doctors on Tuesday have given up all hope of his recovery.

Here From the West.

C. H. Nelson and wife, of Acme, Alberta, are visiting in the city, the guests of Fire Chief and Mrs. Armstrong. Mr. and Mrs. Nelson have been in Toronto, Port Dover, Simcoe and other places in western Ontario, and will spend a week or ten days here. Acme is situated about sixty miles from Calgary.

Right now is the best time to have your residence photographed if there are many trees in front. Phone G. E. Morrison.
