Acid Stomachs Are Dangerous

Common Sense Advice by a Distinguished Specialist 'Acid" stomachs are dangerous be cause acid irritates and inflames the delicate lining of the stomach, thus hindering and preventing the action of the stomach and leading to probably nine tenths of the cases stomach trouble from which people suffer. Ordinary medicines and medicinal treatments are useless in such cases, for they leave the source of the trouble, the acfd in the stomach, as dangerous as ever. The acid must be neutralized and its formation prevented, and the best thing for this purpose is a teaspoonful of bisurated magnesia a simple antacid, taken in a little warm or cold water after eating which not only neutralizes the acid but also prevents the fermentation from which acidity is developed. Foods tress may be eaten with impunity it the meal is followed with a little bis. urated magnesia, which can be obtained from any druggist, and should al-ways be kept handy.
