

News And Views Of And For The Farmers

Engine a Labor Saver

Those who have never used a gasoline engine can hardly realize what a lobor-saving and profitable machine it is on the farm.

With my ten-horsepower engine I can do many things with very little cost that would otherwise cost me considerable each year.

To do any and all kinds of work the farmer wants at least a tenhorsepower as the purchase price and the cost of running one is but very little more than the cost of a smaller one and with the larger engine you can do a great deal more work than with the smaller one.

With my engine, I can drive a corn shredder just as easily as a steam engine would and with much less cost as the engineers' wages are saved, besides the cost of fuel for steam power, which is greater than the cost of gasoline for the same

gine, which is ten horsepower, it it from one place to another. The takes ten gallons of oil per day. This, skids should be large and long enat eleven cents per gallon, makes the ough to place the engine and tanks cost of running for ten hours \$1,10; on the same base by having one end that is, when running up to its full of the skids slanting like a sled run-

heavy you can run on less oil. This er with a pair of horses. depends altogether on what you are The gasoline engine is one of the doing or the power necessary to do most profitable machines on the

driving a wood saw. All you need is the jobs from the team as well as

cut off saw and about 40 feet of six-1 inch belt and you are well equipped

for wood-making. With this outfit two men will saw as much wood in five hours as four men will saw in ten hours with the common cross-cut saw and do it so much easier and cheaper.

I also use my engine for pumping water and running a cream separa-

Through my milk house I have a line shaft and by means of small belts and pulleys I can attach my cream separator, my pump and a grinstone I can run one or all of them at the same time.

This line shaft extends through the milk house and six feet into a shed. To this end of the shaft I connect my engine by means of a clutch coupling and when I want to use any of the above named machinery all I have to do is to turn on the oil and

Of course, to do several kinds of work with the same engine it is necessary to have the machine on port-For ten hours' running of my en- able skids so as to be able to move ner. It is ean easy matter to move But, when the work is not so the engine from one place to anoth-

THE BUGLE BLAST TO CANADA.

Readers of the newspapers and followers of the course of the war must long ago have become convinced that the situation grows more and more intense and critical day by day. Great Britain is faced not alone by outside enemies, but by labor troubles and by lack of resources in the matter of food production that Germany and Austria-Hungary possess. She cannot feed herself and is compelled to rely largely on other countries for a supply of the necessities of life. In such case the duty of her children is distinctly plain. It is noteworthy of her enemies that they are not only thoroughly united, but that they are enduring with what fortitude they possess the rigid military enforcements that are placed upon them for the conservation both of food and material. Every man, woman and child, from the Kaiser down, have been put on rations. The idea is three-fold, to guard against any possible emergencies, to mislead the foe into over-confidence and by thoroughness to bring such pressure to bear as will hasten the final decision. Britain is pursuing the same course. She has not yet found it necessary to place her population individually on short rations but she has found it desirable to take over munition factories in order to ensure supplies that mean either life or death to the nation. Meantime, Germany, by cowardly submarine assination, is endeavoring to starve her people and cripple her resources.

With such a state of affairs existent, it is hardly necessary to explain to stay-at-home Canadians how best they can fulfil their manifest duty and show the burden-bearers how completely they possess their sympathy. But the bugle blast has its rallying power in peace as in war. To all the people, and to farmers, breeders and settlers in particular the Patriotism and Production movement that is in progress is blowing its bugle, or, in other words, carrying its message. Its object is to arouse all and sundry to the part they are called on to play. That part does not of necessity mean harder work nor increased acreage; but it does imply the exercise of every faculty in attention and viligence. It does imply in order to secure increased and improved production, by which alone cultivators of the soil can contribute towards the credit of the country and Empire, the greatest care in the selection of seed, in the breeding of live-stock and in economy of the land.

Best Grain For Quebec and Ontario

Dr. Charles E. Saunders, Dominion Cerealist, recommends the following varieties of grain for Quebec and Ontario:

White Fife, good sorts but late in northern districts. In Southern Ontario Blue Stem gives good results. Goose Wheat is useful in extra dry localities. Kubanka makes excellent
