# SWEET CLOVER A RIVAL OF ALFALFA

When an intelligent farmer, after the spring, and preferably on forty-seven years, stops raising that | March and without stirring the soil.

because I have found something bet- and trying to raise a full yield of

Mr. Linton has proved it, not only thereby expecting a full crop

of his neighbors as well. That "something" which this

### History of the Plant

It is a rather interesting bit of history that led up to the discovering of this so-called weed. Mr. Linton's son, while walking along the railroad, noticed bees collecting around the plants, and, thinking it would be a good thing for his own bees, secured some seed and sowed it in his pasture. In this pasture were fifteen head of cattle, and when the bee-feed began to come up the stock left the fresh pasture and turned to the sweet clover, and the result was they were so fond of it that it never got a chance to flower. The father was then persuaded to grow some. "I sowed three-quar-

ters of an acre near the road so people could see it. They saw it all right, and most of them thought me, well to put it mildly, rather foolish.

and giving three bushels to my son, I sold over \$120 worth of seed of that one small field. "The next year I plowed an acre under in the orchard with splendid

"Besides sowing fourteen

### results. Selling the Seed.

"I had no difficulty in disposing of the seed from the thirteen acres. Five and a half loads of clover were threshed out, and I sold the seed for \$2,000. In one day the seed man in Toronto took \$1,000 worth, "Next year twenty-five acres were sown, and the seed was sold to over five hundred people; Every province except Prince Edward Island received some. I sent one shipment of over \$300 worth to Mani-

"Now, just what is sweet clover?" I asked its founder.

"Sweet clover is a legume, and, like all legumes, adds nitrogen to the soil. At the present time the surface-rooting plants are beginning to suffer for want of rain, while sweet clover, with its deep roots, is hay. thriving on an abundant supply far below the reach of the roots of other plants. The root system of sweet clover is enormous. There will send its roots so deep and so about ten to twelve inches high, so completely fill the ground with them | that the crop rests on the stubble, | shaping board. as will sweet clover. This whole root and should it rain it soon dries. system dies the second year of the plant's life and goes back into de- to cover the waggon box and pack cay. If it is true that this system has so as to save all the seed. built up from potash secured from the sub-soil and from nitrogen se- thresher, and then put it through cured from the air, then their decay the regular huller or clover mill. must not only add nitrogen but must add potash and other mineral elements as well.

### As a Green Manure.

"I ploughed down a piece like that in the orchard last week," Mr. Linton remarked. "We put a heavy chain on the plow and it was not a bad job at all,

"You would be surprised to note the results on the soil the year after. Two years ago we sowed half a field with this clover and oats. The other half was put into oats only. After the crop was harvested we let the clover grow up and plowed it under in the fall. The same grain was sown the next year over the whole field, but where the legume had been plowed under, the oats were from eight inches to a foot higher. This land here is a heavy clay, and bakes very easily, but with a crop of sweet closer turned under it loosens it up like a loam." "Do you handle this plant similar

to the other clover?" "No, it is rather harder, but or left to rot as a mulch? Just pacinats though we be decline to real sheep skins, each, up to ..... after a few years' experience I have when is the best time to cut it? main non-resistants in the face of Sheep skins, each, up to ..... ### SELL BROILERS NOW.

Broilers or early spring chickens weighing about one and one-half to two pounds live weight, are in de

Here, according to officials of the Wisconsin Poultry Association, are some points to consider in the feeding and selling of broilers.

The top of the selling season is in early July. Milk-fed broilers command the best uniform prices and are worth it. Keep clean, fresh buttermilk or skim milk constantly before the fowls intended for market. Feed a wet mash of corn meal, bran, and middlings at least twice daily. It doesn't pay the average Wisconsin farmer to keep broilers

closely confined for fattening. open range is better. The American breeds make the best broilers. Use only early hatched stock for broilers. If a good 12 1/0 fair price cannot be obtained, hold the fowls a few weeks and sell as roasters when about four to four and one-half pounds in weight. Ship fowls in strong, roomy crates

Watch the market closely and ship in dozen lots if possible. Farmers, These Are For You.

### A KRUPP GUN HERE.

Captured German Gun To Be Exhibited At The Fair.

Toronto, July 23.-Some idea of the dimensions and destructive power of the captured German gun which the British War Office is loaning to the fair as part of the war trophy exhibit, may be gleaned from the fact that for purposes of crating a box 16 feet long, 9 feet high an a box 16 feet long, 9 feet high and 8 feet wide was required. This is just about the dimensious of the modern sized room of the average dwelling.

The Exhibition's representative in England in sending along the information that the gun is now on its way to Toronto writes that "of the hundreds of guns in possession of the British this is the only one that is says, "it will take up one whole side of "your exhibit."
