for shells if this country had been further advanced in chemistry. There was a shortage of picric acid and toloul. There was no demand for these substances in Canada, and naturally no manufacturers had erected a two million dollar factory to make them. Yet these substances were absolutely essential to the making of shells, as shall now be explained. Before picric acid was adapted in

1886, all explcsives for military pur poses were gun cotton and nitro-glycerine. In 1901 the aromatic nitrocompounds were discovered. Gun cotton was discarded shell filler because of premature ex-

water" explosives because, unlike gunpowder, dynamite, and acid, it will explode even when wet Nitro-glycerine cannot be transported pure, and even when mixed with infusorial earth, is affected by

plosions. It is still used in "under

carbolic acid. Phenol is treated with sulphuric acid and later with nitric acid. This gives picric acid or trinitiphenol. Picric acid attacks metals, and the projectile into which it is introduced must be varnished inside. It is soluble in water, and, therefore, cannot be used in mines or torpedoes. It can be used only in small shells. In large guns the pressure at firing is so great that the picric acid ex plodes prematurely. Consequently a new explosive had to be found for

This was discovered in the hydrocarbon toloul. It is treated as phenol was, with nitric acid, and trinitrotoloul results. Toloul is made from coal, a ton of coal giving up a galion of toloul. One hundred pounds of trinitrotoloul is used in every 750-

Phenol plus nitric acid equals trintphenol or picric acid.

This brief description of shell explosives shows what the ammunition worker is "up against." He must get picric acid or trinitrotoloul in addition to fulminating mercury to complete his shell. When war broke out these substances were not made in Canada except in insignificant quantities. The British Government could not get them, either. A charcoal manufacturer in a neighbouring State is said to be building a plant for the British Government for the making of pieric acid. This plant will cost about two million dollars and supply a considerable quantity. doubt there are other sources being created which the Governments con-

cerned are not divulging. Great Britain's failure to get shells was as much due to a shortage of picric acid and trinitrotoloul as to anything else. Canada's inability to get shell orders was largely due to the same cause. We could not supply

How serious this situation was and s may be realized if we consider the possibility of an unthinkable attack from the United States. At the present moment Canada could not make a thousand complete artillery shells week. This is our state of unpreparedness. Of course, it doesn't matter, because Britannia still rules the easy to use too. You simply damwaves. But without Britain's help pen a comb or soft brush and draw proximately a fortnight.

Registering All Bulgarians. Orders have been sent out from Ottawa to all registrars of alie enemies, the police who are acting as such, and the Royal North-West Mounted Police in Western Canada to treat the Bulgarians now as alien enemies. They will be registered like the Germans and Austrians, and those who are reservists or are likely

to be troublesome will be interned. There are about 25,000 Bulgarians in Canada. It is thought they are largely located in the cities, few hav-

ing taken homesteads.

The necessary orders in Council declaring war with Bulgaria and placing the Bulgarians under the various orders in Council which apply to other aliens will be passed at once. Ing given to stop any Bulgarians from leaving the country. It is not anticipated there will be any trouble ed most of them in Canada are in sympathy with the allies. The experience of the officials after a year's lealing with the Austrians is that they have little sympathy with their homeland, and are anxious to obey Canadian laws and behave like Candian citizens. The only alien

# SALTS FOR KIDNEYS

hood corner Princess and Bagot Sts

Eat less meat if Kidneys feel like lead or Bladder

Most folks forget that the kidneys. like the bowels, get sluggish and clogged and need a flushing occasionally, else we have backache and dull misery in the kidney region.

severe headaches, rheumatic twinges,

torpid liver, acid stomach, sleepless-

ness and all sorts of bladder disor-

You simply must keep your kidneys active and clean, and the moent you feel an ache or pain in the idney region, get about four ounces Jad Salts from any good drug store here, take a tablespoonful in glass of water before breakfast for few days and your kidneys will then act fine. This famous salts is made from acid of grapes and lemon uice, combined with lithia, and is harmless to flush clogged kidneys and stimulate them to normal activity. It also neutralizes the acids in the urine so it no longer irritates. thus ending bladder disorders.

ad Salts is harmless, inexpensive; makes a delightful effervescent lithia-water drink which everybody should take now and then to keep their kidneys clean, thus avoiding serious complications.

A well-known local druggist says he sells lots of Jad Salts to folks who believe in overcoming kidney trouble while it is only trouble.

If Mixed with Sulphur it Darkens so Naturally Nobody can Tell.

Grandmother kept her hair beautifully darkened, glossy and abundant with a brew of Sage Tea and Sulphur. Whenever her hair fell out or took on that dull, faded or streaked appearance, this simple mixture was applied with wonderful effect. By asking at any drug store for "Wyeth's Sage and Sulphur Compound," you will get a large bottle of this old-time recipe, ready to use, for about 50 cents. simple mixture can be depended upon to restore natural color and beauty to the hair and is splendid for dandruff, dry, itchy scalp and falling hair.

A well-known downtown druggist says everybody uses Wyeth's Sage and Sulphur, because it darkens so naturally and evenly that nobody can tell it has been applied-it's so it through your hair, taking one strand at a time. By morning the gray hair disappears; after another application or two, it is restored to its natural color and looks glossy,
