MIGHT USE CAUSEWAY SCHOOL OF AVIATION

FOR FOOT PASSENGERS GOING TO BARRIEFIELD.

So as To Relieve the Terrible Congestion of Traffic On the Temporary Bridge This Summer.

Cataragi bridge seems to be causing a great amount of trouble to people who try to think of methods of overcoming the crowded conditions that are bound to come with a camp of 10,000 men at Barriefield. The motor traffic will be very heavy, but with so many soldiers there who are used to tramping the country roads, there will also be an immense foot-traffic.

A splendid suggestion has been advanced by one who has been studying the conditions. His idea is to use the new causeway for pedestrians and the temporary bridge for vehicles.

The temporary crossing will this year be divided into two sections. Boards will be placed across the road to take the right side of the road. This will be of great value but it does not allow any room for people walking. At present there is just enough room for two motor-cars or horse-drawn vehicles to pass. Pedestrians simply have to trudge against the outside railing to keep away from the wheels.

Even with the most experienced drivers some one is liable to be injured. This will be the great difficulty, as the wheel traffic, when properly regulated, as it will be by the Militia authorities, will take care of itself.

To take care of the thousands of soldiers and others who will use the bridge in crossing to the city it is suggested that the causeway now in course of construction be used. It would be a simple matter and not interfere with the work that is going on. The work is now confined to the centre piers for the lift bridge and from now will consist mostly of concrete work.

The level plains of Barriefield near the Cataragi River shore would prove a site that could be desired as a site for the school. It is now owned by the Government but is seldom or ever used. There are a few times a year that the artillery use this particular part for their training ground, but often the officers prefer the Heights where there is greater field for the training of artillerymen.

The plains, running as they do from the end of the Cataragi Causeway to the point some half a mile away, are very level and slope gradually down to the river. The water below the causeway is always calm, the wind being broken in its sweep down the lake.

WHY NOT ESTABLISH IT AT KINGSTON?

Barriefield Lower Commons An Excellent Site—A Better Place Could Not Be Secured Anywhere.

The Militia Department having practically decided that a new school of instruction in aviation will be started in Canada, there should be some movement started here. Kingston to have the school established here. In many ways Kingston is exceptionally well fitted to be the location of an aviation school. The water, the atmosphere conditions, the convenience of supplies and the fact that it is centrally located to several big cities so that the students' transportation expenses would not be high all lend their part in making it highly suitable for such a school.

Last year the school was situated in Toronto but in the fall it was moved to Cuba owing to the cold weather. The reason given at the time was that there was an urgent call for aviators from the Imperial Government and those in training must be graduated as soon as possible. The call must have stopped as quickly as it began as there is no school now in existence either at Cuba or Toronto.

There can be no doubt of the great assistance that Canada can be to the Imperial authorities in the training of aviators for one of the most important branches of the service. Hundreds of Canadians are making a sacrifice of much time and money to go to schools of aviation in the United States. This money could be better spent in Canada and the course could be under the jurisdiction of the Canadian Military authorities rather than having Canadians go into a neutral country to learn the art of flying.

The level plains of Barriefield near the Cataragi River shore would prove a site that could be desired as a site for the school. It is now owned by the Government but is seldom or ever used. There are a few times a year that the artillery use this particular part for their training ground, but often the officers prefer the Heights where there is greater field for the training of artillerymen.

The plains, running as they do from the end of the Cataragi Causeway to the point some half a mile away, are very level and slope gradually down to the river. The water below the causeway is always calm, the wind being broken in its sweep down the lake.

THE LATE W. STEWART

He Was With the Queen's Engineers At Front.

SECOND CORPORAL WILLIAM STEWART.

Last week a message received at Renfrew conveyed the news that Second Corporal Willie Stewart, eldest son of D. W. Stewart, had been seriously wounded—and, later, that he had succumbed to his injuries.

'Willie' Stewart was in Queen's University when he enlisted, in November, 1914, along with his uncle Neil G. Stewart, as a Sniper in the Canadian Engineers. In April, 1915 they went overseas and remained in England to Sept. last, when they went over to France and for some time have been in the danger zone. Twice had he been promoted—first, some time ago, to the post of Lance-Corporal and lately to the further responsibility of Second Corporal—rank held only in the Engineers' corps. With the bereaved family—one of the oldest and most highly esteemed families, of which he was of the fourth Renfrew generation—there will be deep sympathy.

HIS BACKBONE SPRUNG.

The Snapping Bug Has a Spinal Column Like a Knife.

The snapping bug has a spring in his back, like a knife. When not in use as a spring, it serves him as a backbone, so you see he is a believer in scientific efficiency, and makes one part of his machinery do the work of two. His spring backbone or backbone spring if you prefer, gives him power to jump, which in turn gives him his name.

Nature probably gave him the spring to help him get on his feet when he's on his back. You've noticed how helpless some insects are when you lay them on their backs. Not this one, however.

He slips his backbone out of its groove, and then slips it back again, suddenly. The spring pops him up in the air, he turns a somersault and drops right side up.

Spring backbones are common in several other beetles. The beetle of the pestiferous wire worm, which destroys the farmer's crops, has a spring in his back. Other members of the family make their homes in trees or decayed wood.

Dangerously Ill.

Pte. Burk Bradford Lott, Tamworth, is reported in the casualty list as dangerously ill.

When it se silks with the wife it is apt to silks with the husband.

THE CITY'S BEAUTY SPOTS.

The grounds in the various beauty spots of the city are beginning to show signs of life now. The superintendent of parks, John Phillips, and his assistants are busy planting new flowers and cleaning up the grounds. A. E. Purdy, who has had charge of the grounds at Queen's University for the last three summers, has planted about three hundred new shrubs along University avenue, and the flowers in the many gardens are beginning to sprout. W. J. Kidd, Barrie street, has some flowers blooming already in his beautiful garden, and all the gardeners, both amateur and professional, are looking for some fine returns for their labors this summer.

HAVE PURE BLOOD

Hood's Sarsaparilla Makes Pure, Rich, Red Blood.

Your heart works night and day without a pause. It is the principal organ of the circulation of your blood. It is of the utmost importance that it should do its work well. The quality and quantity of your blood have much to do with its action. If this fluid is pure and abundant, your heart and other vital organs act with more energy than when it is defective in quality or deficient in quantity.

Hood's Sarsaparilla makes the blood pure and abundant. It is the old reliable medicine, that has been sold for forty years, for purifying the blood. There is no better blood remedy, appetizer, stomachic, it embodies the careful training, experience and skill of Mr. Hood, a pharmacist for fifty years, in its quality and power to cure.
