

Plays, Players And Playhouses

"Peg o' My Heart" ran 19 months in London. Isadore Duncan is going to Buenos Aires to dance. Helene Rosson is planning a tour of Japan this summer. Ethel Barrymore will play a dual role in a new comedy. William Gillette will appear for twenty weeks in a new play.

Olis Skinner will act in a comedy of American life by Booth Tarkington. E. H. Sothern gave two weeks' profits—\$15,261.39—to the actors' fund. The Criterion and New York theatres in New York are to be made into one playhouse, seating 5,000. It is the duty of an actor to make the spectators see the part from his point of view and not from theirs.

Blanche Bates will open her season early in October in a play now being written by William Somerset Maugham. Edison hopes to make a camera and projection machine fit for home work. He already has a model completed. Picture shows are given in sections in Argentina. You pay every half hour at the rate of six cents per section. Charles Chaplin is a skilled violinist. He is also a writer of music, and has had several compositions published. Owen Moore and Hazel Dawn are to be co-starred in a Famous Player screen production of a well-known stage success, the title to be announced later.

"Tess of the Storm Country" considered to be Mary Pickford's greatest screen success, is enjoying a successful second run at the Strand Theatre, of New York City. Pauline Frederick appears as a dance hall girl of a Western mining camp in her next Famous Players release entitled "The World's Great Snare." Margaret Illington has accepted a playlet written by Ethel Clifton and Brenda Fowler. Miss Illington plans to make a brief vaudeville tour in the sketch shortly. Julian Eltinge will resume his successful tour in "Cousin Lucy" next season. The play, written by Charles Klein, is the best vehicle in which Mr. Eltinge has appeared, and met with unbounded success last season, both in New York and on the road. Mrs. Fiske will begin a tour of the principal cities next season in "Barstwhile Susan," opening in Boston in September. Her New York engagement at the Gaiety Theatre has been brought to a close. Gaby Deslys arrived in London recently, and, after a brief visit to her home at Kensington Gate, left for Marseilles, France, to attend to the affairs of her father, Hippolyte Caire, who died while she was in America. Sir Herbert Tree has postponed his return to London, intending to go to the New York. It is possible he will not leave the country this year. He expects to resume his motion picture engagement this summer and to present "Richard II." and "The Newcomes" here in the fall. Kathleen Parlow has cabled London Charlton of her safe arrival in Melbourn, England, where the violinist and her mother will spend the summer. Miss Parlow's next American tour will begin in January, following a long series of engagements in Norway, Sweden and Holland.

Formation of the Margaret Anglin Picture Corporation, which will immediately begin to make a series of motion pictures, with Miss Anglin in the leading roles, has been announced. James D. Barton is president of the firm; James Shesgreen, first vice-president; Arthur Voelting, second vice-president; Irving J. Dittenkofer, secretary, and Edward W. Fuller, treasurer.

Nerves Were So Upset Could Not Endure Noise Neuralgic Headaches and Extreme Nervousness Caused Keenest Suffering—Lasting Cure by Use of Dr. Chase's Nerve Food. Once the nervous system gets run down everything seems to tend to make it worse. You worry over your condition, are unable to get the required rest and sleep, noises excite and irritate you and the future is most discouraging. The nervous system does not get the proper nourishment from the food you eat, so you must have something also to lift you out of the run-down condition. You may find that your experience coincides with the writer of this letter and be encouraged to put Dr. Chase's Nerve Food to the test. You will make no mistake in employing this food cure, for, acting as it does hand in hand with nature, it is bound to do you good. Mrs. Jas. Jensen, Gwynne, Alta., writes: "About ten years ago I was troubled with severe attacks of neuralgia and nervousness, and was for several months so bad that I could not get a night's rest. I used several medicines recommended by the druggist. My doctor also prescribed, but nothing he gave me brought any relief. Instead I got worse and worse until I could scarcely do anything or bear the least bit of noise. My nerves were all upset. My husband read about Dr. Chase's Nerve Food and got me some. Although I had no faith in it, I began its use, and after a few doses began to sleep well and the neuralgia left me entirely. I used six more boxes and have never had any troubles from neuralgia or the nerves since. This is to certify that I know Mrs. Jensen and believe this statement to be true and correct. Fred Freeman, J.P." Dr. Chase's Nerve Food, 50 cents a box, 6 for \$2.50, all dealers, or Edmondson, Bates & Co., Limited, Toronto.

James Barrie directed the production. If local color applied in pastel shades can bring success to such plays as "Dumpty Pulls the Strings," why should it not in deeper tones, bringing even more success? William Harris, jr., wants to know and will put the problem to the test when he produces the new play which Laurence Eyre has written for him. All its characters are negroes. The action passes in the South and in New York at the present time. Although the play is a comedy, Mr. Harris promises that the dramatic interest will never grow lighter than café au lait, while it will range through cold gray down to deep chocolate. It is not true, however, that the climax of the piece shows the heroine trying to find the ace of spades in a coal cellar with all the lights turned off. Edna Aug. Marion Abbott, Mrs. Stuart Robson, Olive May, Lottie Alter, Harry Blakemore and Walter Walker are among the actors engaged.

A WOMAN'S HEALTH NEEDS CONSTANT CARE When the Blood Becomes Poor Disease Speedily Follows. Every woman's health is peculiarly dependent upon the condition of her blood. How many women suffer with headache, pain in the back, poor appetite, weak digestion, a constant feeling of weariness, palpitation of the heart, shortness of breath, pallor and nervousness. Of course all these symptoms may not be present—the more there are the worse the condition of the blood, and the more necessary that you should begin to enrich it without delay. Dr. Williams' Pink Pills are beyond doubt, the greatest blood-building tonic offered to the public to-day. Every dose helps to make new, rich, red blood which goes to every part of the body and brings new health and strength to weak, despondent people. Dr. Williams' Pink Pills are valuable to all women, but they are particularly useful to girls of school age who become pale, languid and nervous. Thin blood during the growing years of a girl's life usually means a flat-chested, hollow-cheeked womanhood. There can be neither health nor beauty without rich blood, which gives brightness to the eyes and color to the cheeks and lips. Dr. Williams' Pink Pills do all this as is proved in thousands of cases. Mrs. Wm. Rowe, Carlaw avenue, Toronto, says: "I have received so much benefit from Dr. Williams' Pink Pills that I feel it my duty to recommend them to others. I was about completely prostrated with anaemia. I had no appetite, was terribly weak and subject to fainting spells. I suffered greatly from dizziness, and the various other symptoms that accompany a bloomy anaemia. My remedy after remedy was tried but to no avail until a friend advised me to try Dr. Williams' Pink Pills. Before completing the second box, I was again enjoying splendid health, and have since remained in that happy condition."

To Advertise Canada. The Dominion Government is going into the moving picture business. It is not doing so with the idea of making money, but with the object of interesting people, both in and out of Canada, in the natural resources of this Dominion. Arrangements have been understood, been concluded, and cameramen have already started at filming scenes from one end of Canada to the other. These will comprise views of the country's scenic beauties and pictures of various of its industrial systems. They will be carefully chosen so as to present the Dominion not only as a garden of nature, but also as a land of opportunity. They represent the application of the most modern and popular of pictorial devices to the work of promoting immigration and interesting capital in this country, and will be of use in a variety of ways and by many different branches of the Government service. Mr. Francis Holley, Director of the Bureau of Commercial Economics, Washington, now recognized as one of the greatest modern educational institutions in the world, was in Ottawa recently in connection with this matter. It is understood Mr. Holley has interested the Canadian Government in the project, and that he has offered to exhibit any views that may be taken free to millions of citizens of the United States throughout the medium of the bureau. The offer is one which, if it is likely, will be gratefully accepted by the Government. The use of moving pictures with a view to promoting immigration and trade is in line with the Government's desire to use every means to prepare now for the development which it is expected will come after the war.

May Bank Plan. There is an expectation at Ottawa that the bill which has been introduced in Washington to repute the rail trade from Prince Rupert and Canadian railways to Seattle and United States railways, will not become law. The bill proposes that the shipment of goods in bond through a foreign country (Canada), be recognized only when the shipments are bonded from one United States port to another. Canada has taken a third of the North Pacific rail trade, because of the marketing facilities at Prince Rupert where the fish is shipped in bond for points in the central and eastern States. The effect of the legislation now proposed would be to turn this trade back to Seattle and the Government is watching the situation with considerable interest. Justice Britton says that when he retires from the bench he may locate in Cobourg.

The Newest Notes of Science

A tiny watch is set in the handle of a new loggette. Synthetic milk is being produced from peanuts by European chemists. A patent has been granted for a clip to hold a pencil to a person's ear. Two Pennsylvania inventors have patented a sling-shot with a sight to aid in aiming it. Telescopic spectacles have been invented by a German for persons with extreme nearsight. Operated like a pair of shears, a new implement revolves a buffer to polish the finger nails. The production and distribution of electricity in Edinburgh has been made a municipal monopoly. An erect, made of stiff paper, is the invention of a New York man. Russia maintains at Moscow an experiment station for the study of flax cultivation and manufacture. Helms for aviators have been invented with wireless receiving telephones built into the ear flaps. According to a British scientist X-rays are the most extreme rays at the ultra-violet end of the spectrum. Rubber-covered canvas disks that prevent slipping are attached to the soles of new shoes for very young children. Experiments by German scientists have proved the truth of the old theory that tightening a man's belt lessens hunger. A wire clip, to be screwed in to a door frame, has been invented for holding milk bottles out of the reach of cats and dogs. Next to the United States, Germany has the greatest number of telegraph offices and the largest line mileage among nations. Waste steam from its municipal water and light plant is used by an Indiana city to heat its courthouse and two public schools. In Europe the hydrogen, which is a by-product of the manufacture of oxygen, is utilized to harden oils for use in the soap industry. A power loom has been invented that is said to weave Oriental rugs most closely imitate the genuine hand-made ones as to doily texture. Paper dust exploded with fatal results when workmen carried lighted lanterns into a room filled with it in a paper-tube factory in France. A semicircular top for automobiles that drops down out of sight behind the motorist, has been patented by a Colorado inventor. Russia is the home of nearly one half of the world's Jews and is the only country with a larger Jewish population than the United States. In the last fifteen years electric street cars in the United States have increased at a very nearly steady rate of about 3,000 miles a year. A new tooth brush, with a hollow head and can be connected with a rubber tube to an elevated reservoir for liquids to make it a fountain affair.

For propelling boats Frenchman has invented paddle wheels which may be attached to any boat and revolved by a man pulling at oar like handles. An absorbent pad to hold water for moistening the skin, of which envelopes flaps that is fastened to the back of a person's hand has been patented. Discoveries of extensive deposits of a limestone and silica in the Philippines have led to the formation of a company to manufacture cement there. Powdered rosin and gypsum are the chief ingredients of a fusible insulating and filling material for electrical purposes which has been patented. Uruguay has been given one of the largest and best equipped veterinary colleges in the world through the efforts of an expert from the United States. The surfaces of roads are planed, scarified, rolled and made ready for use in a single trip over them of a machine that a Pennsylvanian has invented. The entire equipment of a wireless station in Italy which has worked successfully for long distances, including the antennae, is enclosed within a cathedral. Driven by a kerosene motor, a motor-cycle has been invented that carries four persons seated ahead of one another and is controlled by the man on the back seat. German experts after tests have decided that ivy benefits rather than injures stone or brick walls on which it grows by drawing superfluous moisture from them. Automobile service for both passenger and freight over the Andes mountains between Chill and Argentina is contemplated in opposition to the present road. Electrical apparatus has been invented automatically to give warning when a chimney smokes by illuminating a sign and, if this be disregarded, by ringing a bell. It will cost Australia about \$25,000,000 to open the Murray river to navigation and to construct an irrigation system that will develop 1,500,000 acres.

To attach metal to wood there has been invented a galvanized steel nail with a lead head, the latter spreading to exclude moisture from the hole the nail makes. French bakers have found it economical to automatically to give warning when a chimney smokes by illuminating a sign and, if this be disregarded, by ringing a bell. It will cost Australia about \$25,000,000 to open the Murray river to navigation and to construct an irrigation system that will develop 1,500,000 acres.
