NEWS FROM THE DISTRICT

CLIPPED FROM THE WHIG'S MANY BRIGHT EXCHANGES.

In Brief Form the Events in the Country About Kingston are Told—Full of Interest to Many.

Mrs. (Rev.) Buchanan, Calgary, who has been spending some time with her mother, Mrs. M. Judd, Athens, is visiting at her old home village, Mallorytown.

Rev. Frank R. Carnell, Ph.B., Winchester, Ind., is spending a few days in Athens. Mr. Cornell graduated from high school and taught in this vicinity a number of years before taking his college degree. He says he sees many changes in Athens since he left twenty-five years ago.

Wallace Johnson, Carleton Place, is a guest of his parents, Mr. and Mrs. W. G. Johnson, Athens, who are not in very good health. Mrs. Johnson has been suffering for the past few days with blood poisoning in the fleshy part of her hand, her sister, Mrs. J. Seymour, Toledo, has been with her the past week.

OTTAWA FLYER HAD A NARROW ESCAPE.

Lieut. Earl Farrow Had His Machine Damaged by German Fire.

Brockville, July 20.—Lieut. Earl W. Farrow, of Ottawa, the first Canadian aviator to bring down a German machine, recently had a narrow escape from death while participating in an aerial attack on enemy positions.

In a letter to his father, R. King Farrow, formerly of Brockville, Lieut. Farrow speaks briefly of the incident. Eight British machines left the British base for the expedition, and only four returned, the one driven by the Ottawa aviator being one of these.

In the face of an attack by two or three German machines, Lieut. Farrow reached his objective and discharged bombs. During this time he was in the company of any other British aviator. Having launched the bombs, Lieut. Farrow started on his return, the enemy machines keeping up the attack.

Before he was out of enemy territory his machine was seriously injured, but he was able to continue until finally the aeroplane was so badly damaged by German fire that he was forced to land. The landing, however, was made within the British lines.

Lieut. Farrow considers himself lucky that he escaped.

J. R. Gilliland, who for over three years filled the position of divisional superintendent at Smith's Falls, to take up his duties as superintendent at Woodstock, N. B.

D. M. Halpenny, Kemptville, has been appointed mathematics master and cadet drill instructor in the Athens high school.

SUCCESSFUL CANDIDATES.

The Junior High School Entrance Results.

Gananoque.

Westport.
Ada Brash, Marcella Carty, Violet Coleman, Abby Derbyshire, Ford Goodfellow, Harry McNally, Leonard McNally, J. Stoness, Mildred Bennett.

*Passed provisionally.

STORM ON RAMPAGE IN EASTERN ONTARIO.

People Are Injured, Buildings Damaged, and Horses are Killed by Lightning.

Douro, July 19.—An electric storm which swept over this district carried considerable destruction and loss of valuable herds and damage to buildings in its path. At Chesong Indian village about fifteen horses were standing near a fence and basswood tree. A bolt of lightning struck a fence post, damaged the tree and killed three valuable colts, the property of Messrs. Comego, Jacobs and Quinguish.

William Diamond of the fourth line of Smith had a couple of four-year-old heavy horses struck by lightning and killed.

A barn belonging to Mr. Maloney of Douro was struck, but no serious damage was done.

A bolt of lightning struck the home of T. E. McMullen, Smith township, and exploded in the dining-room where five people were sitting and who had a miraculous escape. The bolt apparently struck the floor between Mr. McMullen and his mother-in-law, Mrs. Nora Switzer. It ripped zig-zag holes in the linoleum and injured Mrs. Switzer, but both, however, soon recovered.

Although the dining-room was filled with smoke, bricks torn from the chimney, a window in the house broken and some plaster knocked off, the house did not take fire.

On July 13th, in the Anglican Church, Oids, Alta., Violet Pearl, daughter of Mr. and Mrs. R.S. Pierce, Franktown, Ont., was united in marriage to John Russell Cuthbertson, of Abbey, Sask., formerly of Perth, Ont.

Mr. and Mrs. Robert Huddleston, Smith's Falls, announce the engagement of their daughter, Elizabeth Eleanor to G. Harold Francis, Smith's Falls. The marriage will take place quietly the latter part of July.

FOUND BODY OF SMITH'S FALLS WOMAN IN THREE FEET OF WATER

Smith's Falls, July 21.—Mrs. Ed- ward Marrow, twenty-nine years of age, was drowned in the Rideau River, Wednesday night, almost opposite and a few hundred yards from her home. Her body was found by searching in three feet of water. Her coat, a pall, and a bottle were lying on the river bank, but whether she fainted and fell or committed suicide is not known, as an inquest has not been held.

The woman had been out of the hospital, where she gave birth to a daughter, only a short time, and was suffering from nervous prostration. Her eldest daughter came home from Brockville in the evening, and, after affectionately greeting her, the mother left the house, and when she did not return Mrs. Marrow and the neighbors started a search for her.

Not finding her in the neighborhood, the husband went out in his boat along the river bank on which the house faced, and found the body in shallow water. It is thought that the unfortunate woman may have gone down to the river for a pail of water, fainted and fallen in, but there is suspicion of suicide. A family of eight children survive.

MAY BE REDUCED TO BUT ONE CENT.

Postmaster Says He May Make This Recommendation to Congress Next Year.

Washington, July 21.—Postmaster General Burleson told the National Association of Postmasters convened here that if revenues from second class mail were increased "extravagantly for useless political service," the rural mail system were curtailed and payments to railroads for mail transportation under the new space basis were reduced he could recommend to Congress next year that letter postage be reduced to one cent.

Take home a brick of Nelson's Ice Cream. Sold at Gibson's Drug Store.

Gone With Sir Sam Hughes.

Ottawa, July 21.—It is understood here that Dr. Herbert Bruce, the Toronto surgeon, is accompanying Sir Sam Hughes to England, and that it is intended to have him take charge of an important work in connection with the medical service on the other side. The exact motive of the proposal is not known here definitely, but it is anticipated that the appointment will be made after the Minister and Dr. Bruce arrive in England. It is probable that a board will be formed which will have supervision over Canadian medical services.

Railways are busy handling the tourist business. Hamilton honored two returned soldiers who have received the Distinguished Conduct Medal.

Heavy rains flooded the Sarnia tunnel and held up several trains. A dog, turned mad by the heat in Toronto, bit two children.

HOW AEROPLANES SIGNAL.

Soot Clouds and Mirror Flashes Brought Into Use.

To a commander the value of a military aeroplane is its power to locate hostile artillery and direct gunfire, rather than its bomb-dropping possibilities. Thus it is very necessary that a pilot several thousand feet in the air should be able to communicate with the headquarters staff on earth so that he may convey the necessary information for the guidance of gunners hurling shells at targets miles ahead which they cannot see. The French are using a very ingenious method of signalling from an aeroplane by means of soot clouds.

An apparatus filled with lampblack rests near the hand of the aviator, and when he presses a lever some of this soot passes down a pipe and is discharged in a black cloud. The pipe is so delicately arranged that the clouds may be small or large. The operator can spell out the Morse telegraphic code in little clouds, and they can be read from the ground. The aviator is four thousand feet high.

Another clever means of signalling from aircraft is that carried out by means of lamps and mirrors. A lamp which has a flash of 10,000 candle-power sends piercing rays of light through a tube fitted with powerful magnifying glasses. When a message is sent the operator directs his flasher in the required direction, presses a button, and a brilliant light flashes out, long or short, according to the pressure. The officers on earth receive the message and may send a reply in the same way, being provided with similar mirrors and lamps. The rays of light sent out are almost as bright as sunlight, so that they can be seen with the naked eye for a distance of four miles in the daytime and at night for a distance of eight miles.

When military aviators wish to drop a written communication to earth without descending they utilize an ingenious bomb. This contains the document, and the projectile is weighted so that it falls sharp-end first. As the bomb strikes the ground a trigger is released which sets fire to a torch on top and thus the location of the bomb is indicated day or night.

The stationary balloons which are being used in large numbers at the front are in constant communication with earth though they float at a height of over a thousand feet. Telephone wires are attached to the guide rope which secures the aircraft to earth, and the observer aloft and the officers on earth exchange messages by telephone as simply as though they were carrying on a business conversation in the city.

Nelson's Ice Cream Bricks at Gibson's.

Hot Weather Items

Athletic Underwear—W. G. & R. make, \$1.00 per suit

Cool Socks for tired feet, 25c to \$1.00 pair
Silk, Wool, Lisle, Cotton.

Tone

That's where the Victrola is pre-eminent

The Victrola brings to you the pure and varied tones of any musical instrument, and the beauty and individuality of the human voice—all absolutely true to life.

Such fidelity of tone was unknown before the advent of the Victrola—the first cabinet style talking machine; and this pure and life-like tone is exclusively a Victrola feature.

"Why exclusive with the Victrola?" Because of the patented Victrola features, which have been perfected after years of study and experiment:

"Goose-neck" sound-box tube—the flexible metal connection between the sound-box and tapering tone arm, which enables the Victor Needle to follow the record grooves with unerring accuracy.

Concealed sounding-boards and amplifying compartment of wood—provide the very limit of area of vibrating surface and sound amplifying compartment, so absolutely essential to an exact and pure tone reproduction.

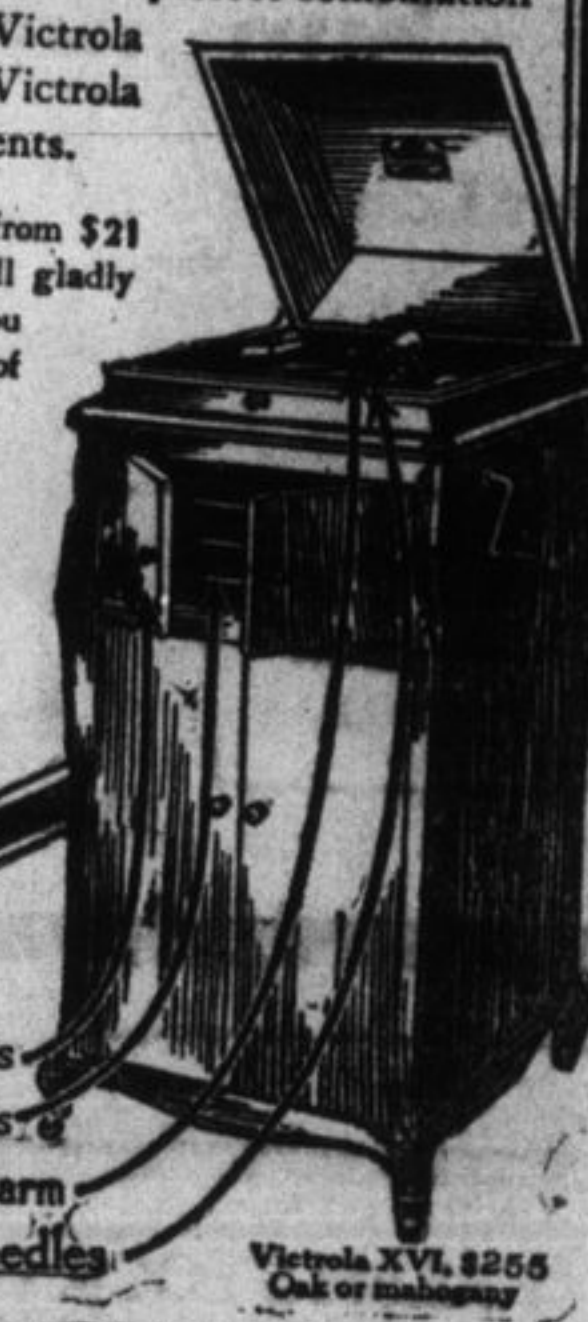

Modifying doors—may be opened wide thereby giving the tone in its fullest volume; or doors may be set at any degree graduating the volume of tone to exactly suit every requirement. Closed tight the volume is reduced to the minimum and when not in use the interior is fully protected.

Victrola system of changeable needles—a perfect reproduction is possible only with a perfect point—therefore a new needle for each record is the only positive assurance of a perfect point. You also have your choice of full tone, half tone or further modification with the fibre needle.

It is the perfection of every part, and its perfect combination with all other parts, that gives the Victrola its superior tone—that makes the Victrola the greatest of all musical instruments.

There are Victrolas in great variety from \$21 to \$305. Come in any time and we will gladly demonstrate them and play any music you wish to hear. We'll explain our system of easy terms, too.
