

Manufacturing the Eye of the Submarine—Extreme Care is Taken at Every Operation With the Periscope

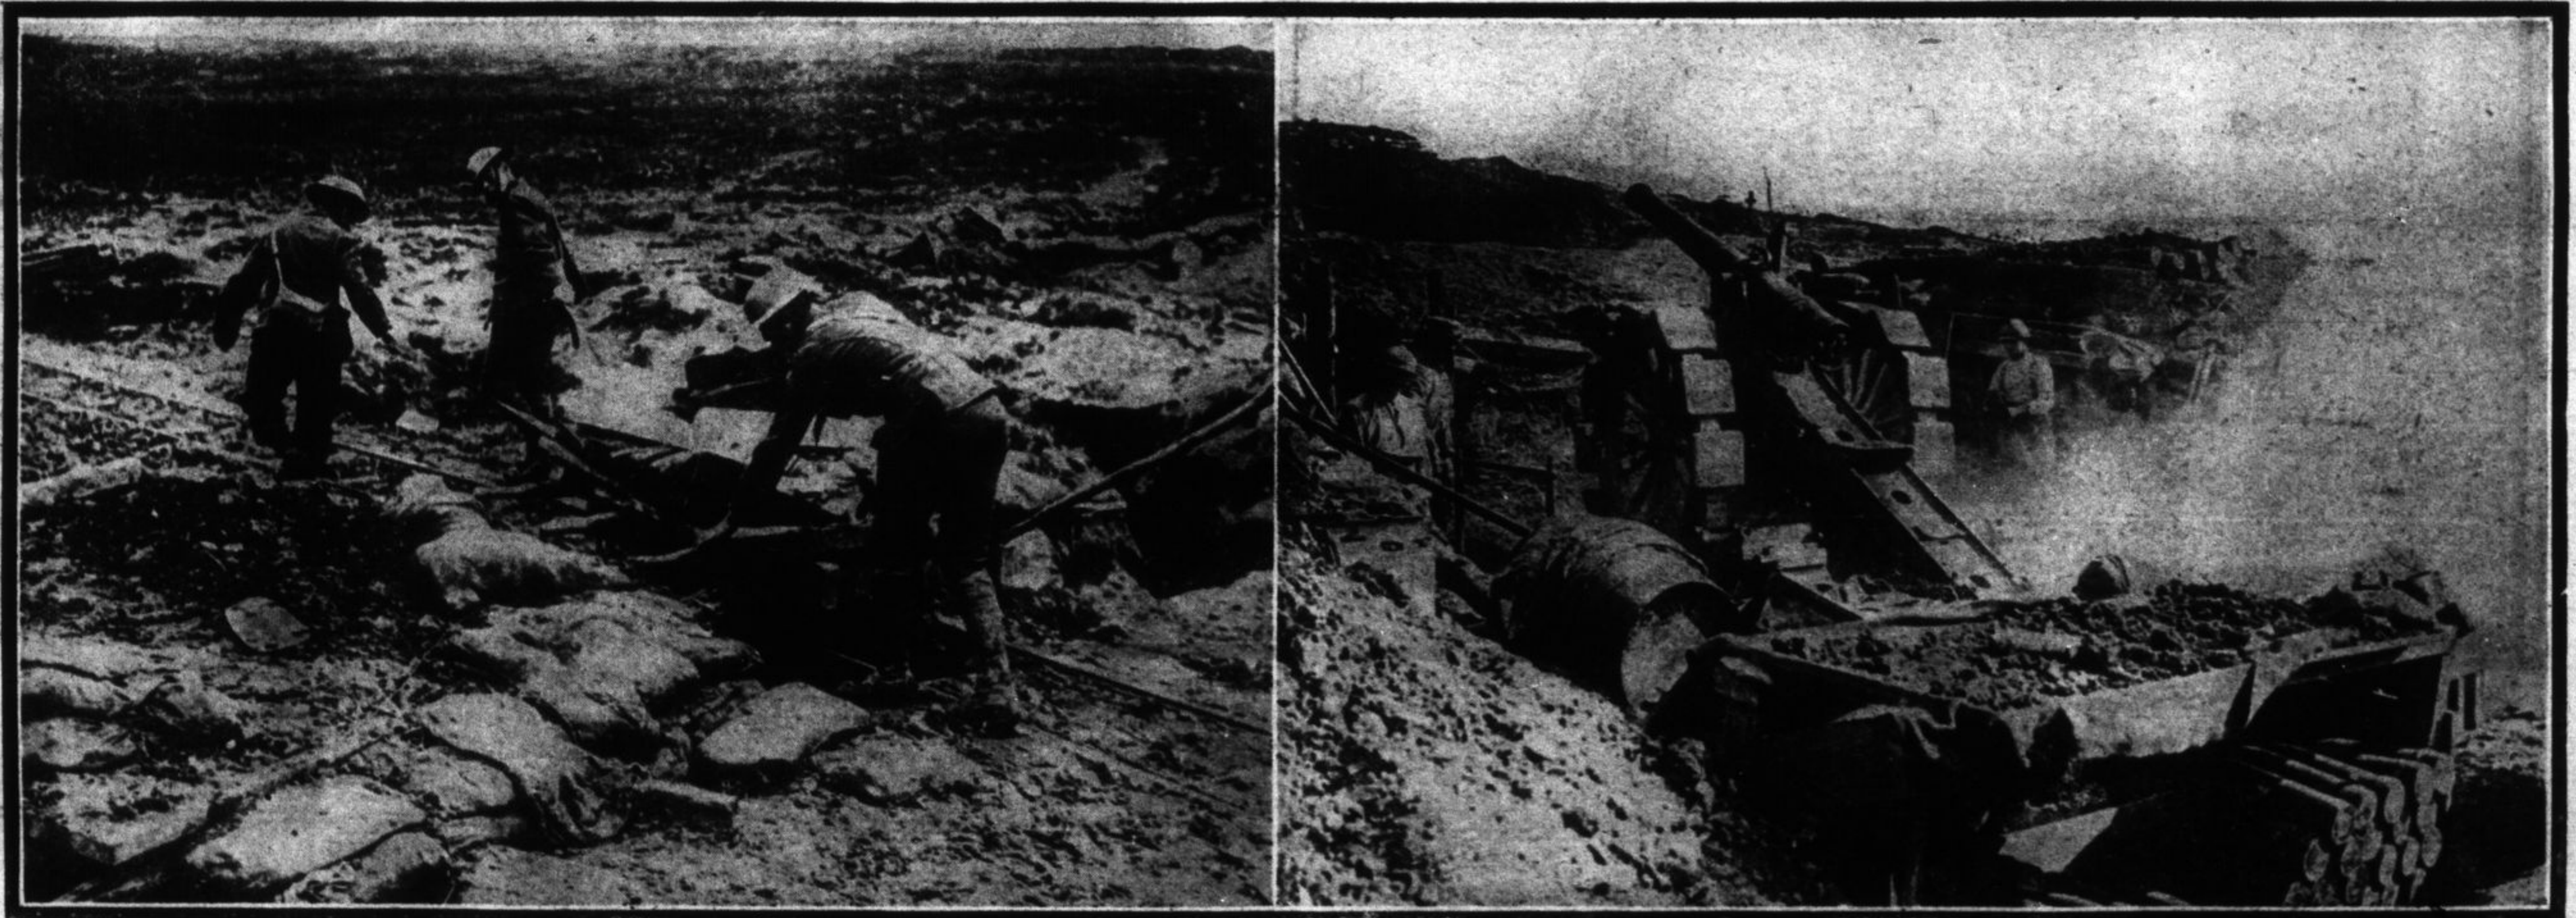

This picture shows workmen in a Brooklyn factory grinding and polishing the lenses for submarines ordered for Great Britain.

Here the reflecting prism is being fitted into the eye-piece of the periscope by expert and highly-paid employees.

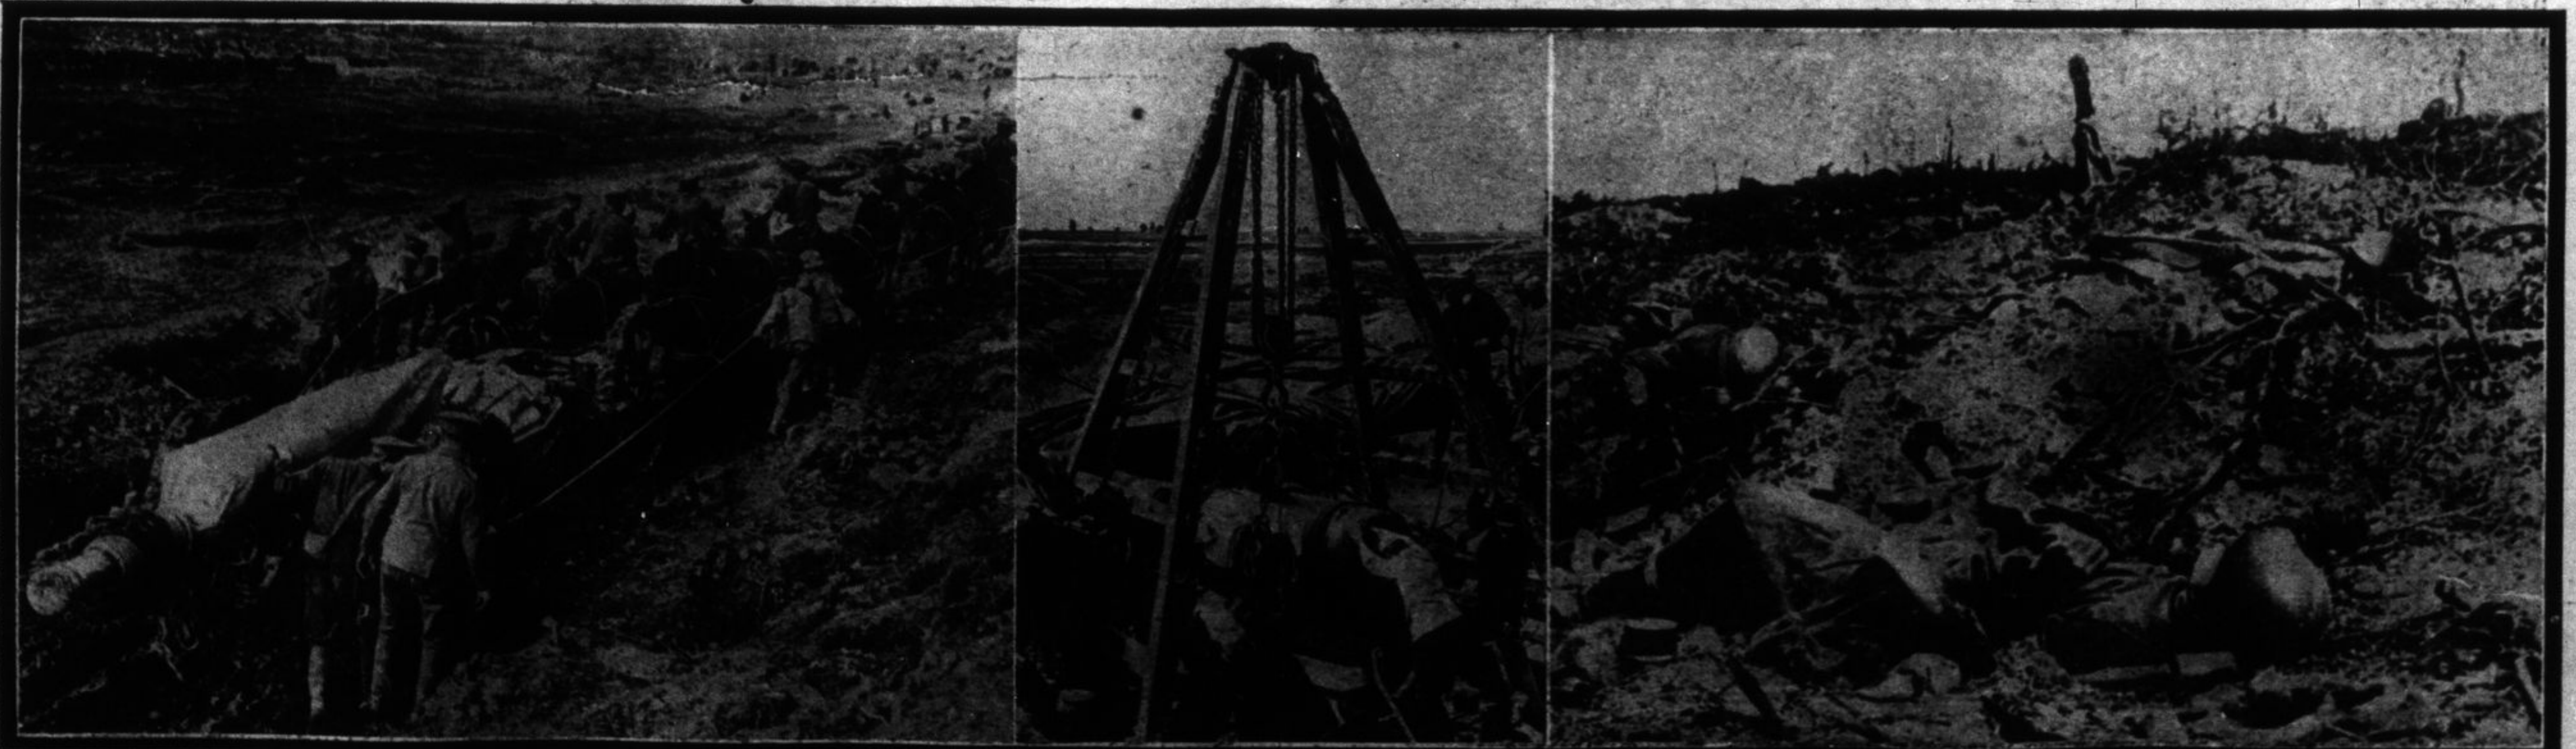

The two pieces of the periscope tube must be watertight at the light. The picture shows the operation of welding.

Latest Pictures From the Battlefield of the Somme and the District Behind

MEDICAL SUPPLIES FOR THE FIELD HOSPITAL BASE. Bandages, toxins, etc., are conveyed to the first aid stations on small cars over narrow gauge tracks. The picture shows French soldiers in charge of such a car.

BUSY SCENE IN A GUN PIT ON THE SOMME FRONT. Here is shown a French gun pit in the Somme area. The gun is one of the 120-millimetres which have proved so effective. Note the supplies required to serve it.

At the left, British soldiers are shown assisting the horses in dragging heavy artillery over roads made almost impassable by rains and shell explosions. The centre picture shows a French 27-cm. gun being swung into position in preparation for a bombardment of the German positions. At the right is a scene in a trench captured by the Allies. Bodies of German dead are seen. The Teuton troops have been supplied with steel helmets somewhat similar to those worn by the British and French.
